It's a perfect location for reaching and operating the radio. It sits just at my right thigh below seat level and still leaves room in the space between seats. The big drawback is looking down at the radio while driving. It takes your eyes off the road. I use my mike to select memoy channels.

Good Luck.

4881. FS CW STATION IDENTIFIER

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-01 00:00:00 UTC
From: ka2qep@webspan.net
Message-ID: <5fa2k4$n2v@news.webspan.net>
Source record: 203282

** FoxGap CW Station Identifier **

This unit is great for repeater identification, when your machine is up and running, or when you are down for repair and want to maintain a presence on your frequency. Also it is perfect for beacon use, just add a transmitter. For beacon use it will control your PTT on your FM rig, or key your output in sideband mode.

Features:
* Adjustable CW speed, 5 to 60 words per minute.
* Adjustable code tone, 200 to 1200 Hz.
* 55 character message buffer, plus.
* 55 character alternate message buffer.
* Repeat message time, 1 minute to 24 hours.
* Programmable from your IBM computer.
* Windows 3.1 or Win 95 compatible.
* Adjustable audio output.
* PTT output and Key (or beacon) output.
* Programming cable supplied.
* Small size, 3"L x 1.25"W x .75"H
* Standard 12 volt operation.
* Under 50ma. current consumption.

Programming requirements: IBM or compatible computer with a mouse and one 3.5" HD floppy drive, running Windows 3.1, Win 95, or higher. And a second COMM. port (2,3, or 4).

The FoxGap CW Station Identifier lists for $69.95 For a limited time the intro offer is $50.00. We can ship UPS COD cash only, MO, or certified check. For further information contact Jim at 610-588-0282 Fax 610-588-0282. Or email n2gkw@epix.net

4882. Shareware/Freeware HAM programs wanted for CD

Newsgroup: rec.radio.amateur.misc

Want some exposure for your shareware HAM program? Want to have fame and ... uh, okay, mostly just fame ;) by having your program published on a HAM CD?!

I am in the process of compiling HAM programs for publication on a HAM CD. If you have any program, shareware, freeware, or whatever, I would like to add it to my collection. I will try to make all of what I collect available on an inexpensive CD, so send me email on what you got! (But please, I can only publish it if you have the rights and give me the permission. NO commercial software -- I'm not a pirate!)

(You may also send me email if you might be interested in purchasing a CD after I have finished collecting programs and start producing CD's.)

Thank you for your time.
Darvell (N7LN)

(PS I am also collecting HAM Radio clip art for publication on CD.
Send me what ya got.)

>
> -Drew in Sunny Central Florida-

You are RIGHT, Drew.... by golly.. and the reason why is that
most kids can't spell any more. It's all that new fangled
'sight reading'. Is it any wonder people want to eliminate CW!

One thing you CAN say about CW is that you do have to be able
to spell the words. Can it be that the decline of literacy in
the USA can be attributed to the attempted abolition of CW?

By the way my kids learned CW on their own. They are not hams
nor do they want to be hams. It seems they were told that they
were not allowed to pass notes in class. So it was only logical
to tap out CW with their pencil erasers. Most of the kids in the
class have learned... now the teacher is learning.. hi

4887. ARRL LICENSEING PROPOSAL A DIFFERENT VIEW

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-01 00:00:00 UTC
From: AB2AJ <AB2AJ@prodigy.net>
Message-ID: <3318B47B.5A72@prodigy.net>
Source record: 203288

The ARRL proposed Licence and realacation of specturm in my opinion does not meet
the needs of the auture comminuity now or into thr 21 century. The proposal lacks in
two major areas.
There is no band plan proposed for frequencies above 50 meg. A diffenate area
should be set aside for each mode of operation in each band up to and includfing at least 10 geg

There is no provision for application and proecdureal testing for ech of the
available modes

It is my believe that a licenseing system which is patterned after commerical Licenceing
should be used. This system would provide for a basic license good for all freqoencies
above 50 meg. This license could then have four endorsments added which would
allow additional privilages below 50 meg as follow
The CW Endorsment would allow for CW operation in the CW areas
The Phone Endorsment would allow for Phone operation in the phone areas
The Digial Endorsment would allow for Ritty, Pactor, all digial mode operation in
those area assigned for digal operations.
The fourth Endorsment Satellite would permit satellite operations and this should
be required for operationing both above and below 50 meg.
To earn these mode endorsments the applicant would have to demosrate proper
operating skills in that mode. For example: A send/receive test for CW at a precribed
speed. A set up and verifation of proper operation with in band width for digal
operations. A demosation of how to set up and use duplex and other key porcedures
required for satellite operation.

These of course would again be in addition to the theory testing required for the basic
license. Incentive licenseing could still be maintained with in each of the mode
endosments by incresing the amount for ferquency available as the licence holders

skills and knowledge improved.

These requirements in my opinion would ensure that a operator in each mode would
have shown good radio practice prior to receiving the endosment for that mode. A
diffent comment to that mode of operation would have been shown.

I was just wondering, Burt... Do you reduce the grade for any of your students caught plagiarizing anothers words, as you have been doing here? Or do you offer extra credit, perhaps for "creative editing" ? It is interesting how someone with such a command of the English language must resort to taking the League's bulletin, change a few words (like "support" to "opposition"), and send it out as your own material. Surely, you could have come up with some original verbage to make your own point known, instead of twisting the words of another? Anyone interested in the original, unadulterated text of the revelent announcements, should check out http://www.arrl.org under "Band Threat News" or "W1AW Bulletins", specifically, ARLB008. And you're right. Time is short. the comment deadline is March 4th.

4891. Re: origin of '5 by 5'

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-01 00:00:00 UTC
From: dr7zyq@rand.nidlink.com
Message-ID: <NEWTNews.857277510.3611.dr7zyq@nidlink.com>
Source record: 203292

It is traditional in giving a signal report to report three characteristics: signal strength, readability, and quality of tone. The latter only applied to cw signals. Quality of tone was measured on a scale of one to ten; the first two on a scale of one to five. So a powerful, perfectly readable cw signal, having a pure tone would be reported as 559, and such a voice signal would be reported as 55 ("five five", not "fifty five") Later this was "lingoed" into the term " 5 by 5 " as if it were a measurement. Also referred to (by some, not by others) as double nickels. I don't think that it is any more mysterious than that.

73,

David, WA7ZYQ

> help me???
>

The key to getting the radio to enter the "internal system alignment"
mode
seems to be having VFO A set to a frequency in the 144-148 band, and VFO
B
set to a frequency in the 430-450 band. It refuses to enter this mode
if
you have other frequencies in place, or even if you have VFO A set to a
70cm frequency and VFO B set to a 2M frequency. Weird, but true. There
are 9 different settings for the VHF mode, and the same 9 setting
options
for the UHF mode. With your VFO's set as mentioned, if you tune to VFO
A
before turning off the radio and then entering the alignment mode, you
get to set the VHF values. Then tune to VFO B, turn off the radio,
power
it back up with the magic 3 buttons pressed, and set the UHF values.

Be V E R Y careful with the settings. Some of them do NOT work the
way
you might imagine, and I managed to screw up my radio for awhile because
of it. For example, if you select the S1LV (S1 level) or S9LV (S9
level)
options, you can twiddle the knob all you want, and you CAN'T change the
numeric value that the radio is displaying. Consequently, since I had
VFO A tuned to 144 MHz and there was no signal present, I managed to set
my S9 level equal to ambient RF noise level. Thereafter, every 2M
signal
(and many non-signals) registered S9 on the LCD bargraph. After much
frustration, I determined that the way you set those two items is to
tune

in a signal of the strength that you want to register as S1 or S9 respec-
tively, and THEN enter this mode. Of course, that requires that you find
the signal and tune it in while the radio is in normal operation mode,
THEN turn it off, then hold down the PTT, lamp, and knob, while turning it
back on. And hope that while you fussed with all that, the signal you want
to use as your S1 or S9 reference level is still around at the same strength
and same frequency. (I presume that the PROPER way to do this is with
test gear that allows you to generate the signal yourself, but I had to
improvise.) Fortunately, my S meter is working reasonably now, but I'm
pretty sure I still have the squelch settings a bit screwed up on the 2M
side. Sadly, even a "master CPU reset" doesn't restore those settings to
factory presets, or any other reasonable values...

After much hunting around, I finally found a reasonably-priced (about $100)
VHF/UHF SWR and power meter that has a 5-watt full-scale range. It is an
NCG-3000. I discovered that even with the FNB41 battery pack, or with the
13.8V automoble power cord, my FT-50r was only putting out 3.5-4.5 watts
on the high power setting, and the other power levels were also on the
skimpy side. I tweaked all 8 levels (L1, L2, L3, and HI for VHF, and
the same 4 for UHF). The "bad" news is that even when set to the maximum
value (255 arbitrary units), I still can't quite hit 5 watts on UHF,
only about 4.5 watts. On VHF, the max setting puts out between 4.5 and
6 watts depending on the exact frequency within the 144-148 band you're
on. I have noticed that now that I have the HI power setting cranked up
to (or almost to) the rated 5 watt value, the radio gets noticeably warm
during long conversations. I hope that's not a bad sign. (No, it's not
heating up because of a large amount of reflected power from a poorly
matched antenna. The antenna in my car has an SWR of 1.2:1 at the 2M
frequencies I use the most, and at its worst, an SWR of 1.4:1 at around
440 MHz. Most of the power is going in the correct direction!)

I'm in the same boat as you're in. I'd always had an interest in Ham Radio, but in all the years, I never got off my duff and tried to get my license. That was until last week when I passed the tests for the Tech. I'm still waiting for my call sign to appear on the new call sign pages. (I know it's going to be KF6J??.)

I'm starting to find lots of useful information via the Net.

For finding clubs try this WEB page:

http://www.arrl.org/field/club/clubsearch.phtml

A very helpful FAQ is found at:

http://www.mv.com/ipusers/wd1v/hamradio.faq.html

(You'l find some great links in this FAQ.)

Here's a link with a zillion Ham Links:

http://www.connix.com/~wz1v/ham-www.html

Also, I just got the ARRL Handbook for Radio Amateurs; it costs $38, but is worth every cent!!! The book is jammed full of information regarding Ham Radio. Plus, it covers things one might not have considered. Trying to read it is a little like reading the phone book, but you can flip through and find _LOTS_ of things that are very interesting.

Sincerely,

Bob Diaz

I suppose you could build a transmitter that would
generate 25 watts or so of RF at 3.579 mhz AM mode
125% modulated carrier. This should do a nice job
of jamming the video output of the camera. It would
have to be in close proximity of the camera to be jammed
depending on the shielding ability of the camera, ect.

Hope this helps,

Brett Collins

Hi, and thanks for reading this.

I'm looking for a good buy on an R390 or R390A. Need not be working.
If you are short on cash and long on radios, please contact me. I
want the pleasure of restoring one of engineerings miracles.

Any leads also appreciated.

Tnx de Bob

When I was in the military 68-71 we used 5 X 5 on teletype to indicate
five characters sent and the same 5 received correctly on remote loop.
The expression probably cam along before that.

Have fun checking it out.

The point is technical correctness and usage of proper teminology.

The use of (long) outdated terminology in what's a rapidly evolving,
highly technical field can reasonbly be inferred to illustrate that
the user's skills and knowledge in said field are likewise outdated.

In such a rapidly evolving technical area, "outdated" skills can be
accurately considered inadequate skills ... that's the primary, worst
problem facing ham radio ... and it's a situation that's promoted,
rather than combated by the technically backward posture of
the ARRL and the large majority of pro-coders.

Many have stated that they feel (and I agree) that going back
to the 1 minute of solid, letter-perfect copy instead of the
multiple choice quiz (which allows one to read context and
"get the gist of" things) is an increase in Morse testing difficulty.

And what I meant was that to the ARRL (and the beepers) to
"upgrade" is to learn to copy code faster ... nothing else counts
as much to them ...

> I also do not believe that anyone with ARRL, nor any pro-coder, has

You'd better get your eyes checked, Ed ... spouting the
"party line" so frequently and repetitively has apparently
generated low frequency resonances which have adversely
affected your vision ...

WA4CZD Chet Atkins Singer
WA7WYV Andy Griffith Actor
WB4KCG Ronnie Milsap Singer
WB4KVB Paul Yandell Musician
WB6ACU Joe Walsh Singer
WB6RER Andy DeVine (SK)
WD4SKT Donny Osmond Entertainer
WP4CO Jose Feliciano Singer

Several lists have propagated through the amateur community from time to time often with errors. For example, some lists claim N6KGB was actor Jimmy Stewart, when the call was really held by another well-known actor: Stewart Granger (whose real name was James Stewart, and who became a Silent Key in 1993). Many lists claim that Russian cosmonaut Yuri Gagarin was a ham (some lists even claim his call was UA1LO); there is no hard evidence that he was ever licensed. Another rumor insists that musician Jon Bon Jovi is a ham. He is not licensed but his cousin, record producer Tony Bongiovi, is KX2Z. Other lists indicate that musician Jose Feliciano is a ham; WP4CO's name is definitely Jose Feliciano, but he's not the famous musician. Donny Osmond was once licensed as KA7EVD, but his license has expired - another Donald Osmond holds the call WD4SKT, but it's not the same person. KD6OY insists that his name is really Garry Shankling, not Shandling, even though he lives in Los Angeles. And WA7WYV's name is indeed Andy Griffith, but he's never played either Andy of Mayberry or Matlock on television.

The problem is that the situation is far worse than most believe or are
willing to accept.

> Is ham radio really in as much trouble as we read it is, or has our
newfound
> toy of instant personal communications for the masses just provided a
soap
> box with a much larger audience than was previously available ?

The problem is not that ham radio *can't* "compete" for the interest of
people.
The problem is that it *won't* ... in many cases, writers specifically
state
their
opinion that "the bands are too damned crowded already" (these are the
same
people who vehemently support backward, inefficient technologies that waste
our spectrum ... and policies that warehouse the vast majority of our
precious
VHF/UHF spectrum so that some vain SOB can have a CW IDer beep out
his callsign every 10 minutes (whether the channel gets any reasonable
degree of use is irrelevant ... it's "his" frequency because his good old
boy
buddy the "frequency coordinator" says it is ...and nobody else better
damned
well try to use it, even when he's not so inclined.)

> Everyone seems to be aware of the 'problems'. Nobody seems to have any
> intelligent solutions. Take the 'internet problem', for example.
Obviously,
> many more young people are presented with the internet than are presented
> with ham radio. The world wide web with it's graphics and point and
click

> The 'solution' we are presented with by the techies is to a) kill the
code and
> b) invent more hitech modes for ham radio, upgrade our 'packet network'
to
> gigabaud rates, use spread spectrum technologies......

Right ... the only way to make ham radio more attractive than the internet
to
the young, computer-savy (future of ham radio, if one is to exist)
generation
is to make it more interesting, faster than phone data rates, etc.

You can't bet most people to give up good wine and accept vinegar instead.

> I run a packet BBS/DX cluster here in Guam.

I wouldn't brag about that ... the BBS may have utility, even at rates as
low
as 9600, but "packet clusters" are an abomination ...

> I use two computers, an HF
> radio for a link to Japan, a VHF radio for local users, a UHF radio for a
9600
> baud forwarding link to another BBS on the north end of the island, three
TNC's

> get it in a week or so, and MAYBE I will get an answer back..... I don't
do
it
> because it's fast or efficient, I do it because I enjoy doing it.

The point is, that it *should* be as fast or faster than your dialup
internet
connection ... and as reliable ... actually moreso, because the links are
not wired circuits (like your local loop, which can be taken out by a storm
or an errant backhoe operator, depending on whether it's above ground or
below.

> From a marketing standpoint, which is your business, how do we convince
> someone to join us on packet when they can do everything we are doing,

rate
> hitech ham radio invention can we put together and make available to the
masses
> that will be available for less than $19.95 a month that will make
everyone

drop
> the internet like a hot rock and flock to ham radio ? I doubt there is
one,
and
> I doubt there ever will be one.

Well, let's see ... the connections can't be charged for, 'cause it's
amateur radio, not a commercial ISP ... that doesn't mean the links
can't exist, though ...

Let's say that one invests equivalent of the $19.95/mo. in equipment,
amortized over a 5 year service life ... modern electronic equipment
should last *far* longer, but will be obsolete for sure in 5 years.

That implies that for the same cost as montly internet service
I can invest $1,197.00 in a piece of equipment (an RF modem).

There would be NO problem in designing and building an RF modem
in reasonable quantities that will blow v.34 rates away, given a $1200
retail price point ... I recently build a DSSS device for the 900 MHz
band that transmitted at ~ 150 kbps (chipping at 10x that) ... and had
a retail price point of $300-500 (it had LOTs of "extra" features) ...
I have evaluated another 900 MHz SS phone (with less features) that
transmits at about 64kb/s in each direction simultanteously (full duplex)
and can be ordered by mail order for under $200 ... that's how I got the
evaluation sample. (the point of these "tidbits" is that the price point
could be well below $1200 and still blow away the landline dialup)

What I'm trying to say is there's no reason besides ignorance of the
possibilities and lack of willingness to acquire the capability. It could
be manufactured economically (no, I'm not hyping something that
I'm doing at work ... as I've said before, I don't believe my employer
would spend a picosecond considering the small pond that we
swim in ...) or could be kits ... or could be homebrewed from
schematics ... maybe even adapted, enhanced, and improved by
the occasional ham experimenter ... (ham experimenter ... God,
what a *novel* idea that must seem like to you, Jim ...)

> I don't see the internet as a problem to ham radio.

Me neither ... ham radio operator attitudes and lack of modern
skills are the major problems ...

> But I am sure of one thing. Nothing lasts forever.

Except, perhaps the code in the minds of some ...

> Maybe in todays world of
> high speed digtial satellite communications, celluar phones,
> and the internet, it is time for ham radio to die.

No it's just time to adapt ... actually to play catch-up, after the
last several decades of majority stagnation ...

[snipped some absolutely pathetic babbling about "peaceful deaths" etc.]

Why is it that pro-coders seem to feel that having ham radio die would be a better outcome than simply catching up with the times?????

Jeff,

While it is generous to state that the behavior is "certainly undesirable,"

you have to recognize that most of those fishermen have no more
than an elementary school education (at best) ... they come, in most
cases, from the poorest of the poor families ...

What I'm saying is that they don't know any better because nobody
has educated them to know better ... they in all probability have
never been told in a way that they understand that "this frequency is
ONLY for emergencies, don't 'chit-chat' there" What they've probably
been told is simply "keep your radio on this channel at all times and
keep your ears open, too, in case someone calls for help."

Again, I'm not trying to say what they do is "OK" ... just that it's not
entirely fair to state that their action is motivated by a lack of repect
for the law or a desire to be intentionally disruptive. Also, I recognize
that there are a few bad apples in every barrel and that a few may
deliberately behave that way "to piss off the gringos."

Believe it or not, some Mexicans have been seriously mistreated by
"gringos" ... either here in the US or even in their own country and,
as a result, have "an attitude." Not a large proportion, have this
attitude, but a few do ...

[ANARTS - Australian National Amateur Radio Teletype Society]

This is the Australian National Amateur Radio Teleprinter Society

with our weekly Rtty bulletin. We transmit on the following

frequencies and times :

3.545 MHz (Plus/minus 5) 0930 UTC VK2CTD (COL)

7.045 MHz -3 0030 UTC VK2CTD (COL)

14.070 MHz (amtor/fec) 0030 UTC VK2DPM (ALAN)

14.091 MHz 0030 UTC VK2DPM (ALAN

146.675 MHz 0030/0930 UTC VK2JPA (PAT)

144.850 MHz (ax25 bbs) VK2JPA AT VK2WI

146.675 MHz (rtty mmbbs/repeater) VK2RTY

INTERNET RADIO-INFO-DIST AT UCSD.EDU

Views expressed in this news bulletin are not necessarily

those of the Broadcast Officer, the Relay Officers, or of the

Society.

A.N.A.R.T.S. News Bulletin 947 23 February 1997

COLS COLUMN

GOOD MORNING ON THIS FINE SATURDAY MORNING IN SYDNEY TOWN.

TOMORROW THE ANARTS COMMITTEE WILL ALL BE AT THE CENTRAL COAST

FIELD DAY, I HOPE YOU WILL COME ALONG AND SEE US AT THE ANARTS

STAND, AND SEE THE NEW COMPUTER SLIDE SHOW TELLING YOU ALL

ABOUT OUR SOCIETY.

THIS WEEK WE CONTINUE WITH OUR EARLY COMMUNICATIONS SERIES AND

IN PARTICULAR JOSEPH HENRY. YOU WILL RECALL IN EARLIER CASTS

THAT HENRY EXPERIMENTED WITH ELECTROMAGNETS AND BATTERIES, HE

DISCOVERED THE IMPORTANT FACT THAT THE RESISTANCE OF THE LOAD MUST BE MATCHED TO THE RESISTANCE OF THE POWER SOURCE. THIS DISCOVERY WAS AND IS OF THE GREATEST IMPORTANCE IN COMMUNICATIONS ENGINEERING. A LONG LAND LINE CONNECTING TWO STATIONS SEPERATED BY A LONG DISTANCE HAS A VERY HIGH RESISTANCE AND SO HIGH RESISTANCE RECEIVING EQUIPMENT IS REQUIRED TO TAKE ADVANTAGE OF THE ARRIVING SIGNAL CURRENT. MODERN INSTALLATIONS USE ALTERNATING CURRENT AND SO TRANSFORMERS CAN BE USED TO 'MATCH' LOADS. BUT AT THE TIME THAT HENRY MADE HIS DISCOVERY THE TRANSFORMER WAS NOT YET INVENTED, IT WOULD COME OVER HALF A CENTURY LATER.

FROM A MODERN VIEWPOINT, THE USE OF MAGNETS AND BATTERIES SEEM OBVIOUS, YET IGNORANCE OF THE PRINCIPLE INVOLVED HELD UP THE WORK OF SUCH MEN AS COOKE AND WHEATSTONE UNTIL IT WAS EXPLAINED TO WHEATSTONE BY HENRY HIMSELF. FARADAY DID NOT KNOW ABOUT THIS PRINCIPLE YET AND IT ELUDED BARLOW. RONALDS SUCCEEDED IN TRANSMITTING ALONG 8 MILES BECAUSE HE UNKOWNINGLY FOLLOWED THIS RULE. A STATIC ELECTRIC MACHINE IS THE EXTREME EXAMPLE OF A HIGH VOLTAGE, HIGH RESISTANCE POWER SOURCE. RONALDS DID WHAT HENRY SUGGESTED LATER, HE MATCHED AN 'INTENSITY' SOURCE TO AN 'INTENSITY' DETECTOR AND BOTH SUITED THE LONG RESISTIVE LINE HE USED.

UNTIL THIS TIME, 1831, THERE WAS NO CLEAR INFORMATION REGARDING THE DIFFERENCE OF EFFECT OBTAINED USING A SINGLE CELL WITH LARGE CAPACITY, OR A BATTERY CONSISTING OF A NUMBER OF SMALLER SEPARATE CELLS CONNECTED ZINC TO COPPER, ZINC TO COPPER ETC AS WITH THE ORGINAL VOLTAIC PILE. AS WE WOULD NOW SAY, CONNECTED IN SERIES. AFTER HENRYS WORK IS WAS REALIZED THAT THE RELEVANCE OF THIS INFORMATION DEPENDED UP THE NATURE OF THE CIRCUIT CONNECTED TO THE POWER SOURCE, NO CLEAR IDEA AS YET EXISTED AS TO WHAT EXACTLY THE GALVANOMETER WAS MEASURING.

NEXT WEEK WE WILL CONTINUE WITH HENRY CARRYING OUT FURTHER

EXPERIMENTS INCLUDING A CONSTRUCTION OF PROBABLY THE FIRST

ELECTRO-MAGNETIC TELEGRAPH AND THE CONSTRUCTION OF PROBABLY

THE FIRST ELECTRIC MOTOR.

73S FOR THIS WEEK DE COL VK2CTD, CLUB PRESIDENT

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(14 FEBRUARY - 20 FEBRUARY)

ISSUED ON 21 FEBRUARY 1997

SUMMARY

Date 14 15 16 17 18 19 20

10cm 71 72 72 73 73 72 73

A 6 3 10 14 8 4 (5 ESTIMATED)

T 19 2 12 0 -18 -0 1

SOLAR ACTIVITY WAS VERY LOW 14TH TO 19TH, AND LOW ON 20TH.

THE GEOMAGNETIC FIELD AT LEARMONTH, W.A. WAS QUIET ON 14TH AND

19TH TO 20TH FEBRUARY ; MOSTLY QUIET ON 15TH; QUIET TO

UNSETTLED ON 16TH TO 18TH. THERE WERE BRIEF ACTIVE PERIODS

OVERNIGHT ON 15TH TO 17TH.

FREQUENCIES WERE NEAR MOSTLY NEAR PREDICTED MONTHLY VALUES

WITH DEPRESSED PERIODS TO 15 PER CENT ON 16TH AND 18TH, AND

TO 20 PER CENT ON 17TH.

FORECAST (21 FEBRUARY - 27 FEBRUARY)

SOLAR: lOW TO VERY LOW

GEOMAGNETIC: UNSETTLED TO ACTIVE 22-24 FEB, QUIET TO

UNSETTLED DURING OTHER DAYS.

FREQUENCIES: UP TO 30 PER CENT DEPRESSIONS IN MUF'S EXPECTED

IN MID TO TO HIGH LATITUDE REGION DURING 22-24

FEBRUARY. POOR NIGHTTIME HF PROPAGATION

CONDITIONS EXPECTED DURING THIS PERIOD.

Notes of Interest:

ST. PETER & PAUL ROCKS, ZY0 - Randy, WX5L regretfully reports that due to RFI problems which cannot be resolved on the island, it is highly unlikely that there will be any further RTTY operation on this trip.

SEYCHELLES, S7 - IK2GNW will operate as S79GN from 12 to 19 February on CW, SSB and RTTY. QSL direct to home CBA.

MAURITIUS, 3B - After his trip to S7, look for 3B8/IK2GNW between 20 February and 1 March.

EAST MALAYSIA, 9M - PB0ALB will operate as 9M8CC on Amtor, RTTY and SSB from 19 April to 6 June. Suggested times for Europe are: 3.5 Mhz at 000Z, 14 Mhz at 1200Z, and 21 Mhz at 110Z.

ST. MAARTIN, PJ8 - ND5S, KF5LG, W8EB and KB8ZXO will be operating PJ9/home call on all bands, CW, SSB and RTTY from 23 February to 8 March. QSL to home calls CBA.

The VK2SG RTTY DX Notes are also available on the Internet at reflector digital-dx at st.rim.or.jp . See also the OH2BUA Webcluster at URL http://www.clinet.fi/~jukka/webcluster.html

ARLD009 DX news -- excerpts

This week's bulletin was made possible with info provided by Tedd, KB8NW, the OPDX Bulletin, the 599Rpt, Dennis, K7BV, Jack, W1WEF, the DXNL, the Yankee Clipper Contest Club PacketCluster Network, and Contest Corral from QST. Thanks to all.

GHANA, 9G. Steve, PA3GBQ, is QRV as 9G5BQ until early March. Lately, he has been found on 3514 kHz starting at 2200z and was heard as late as 2345z. QSL to PA3GBQ.

ARUBA, P4. Look for P40W to be QRV in the ARRL DX CW Contest as a Single Op, High Power, All Band entry. Check 160 and 80 meters on the hour or half hour.

ST. KITTS, V4. Alex, W2OX, will be QRV as V47KP from February 13 to early March. He will also be active in the ARRL DX CW and SSB, and CQ WW 160 Meter SSB, Contests. QSL via K2SB.

BURKINA FASO, XT. Dan, XT2DP, has been QRV on 80 meters around 3795 kHz at 2000z. QSL via WB2YQH. XT2AR is also QRV from Ouagadougou, and will be here until February 26. QSL via W4BYG.

CAMBODIA, XU. Robert, KE2FB, works at the US Embassy and is active as XU2FB on 80 through 10 meters. He uses CW, SSB and RTTY. He can also be found on 10 meter FM. QSL via N4JR.

Ohio/Penn DX Bulletin No. 292 -- excerpts

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, KE2VB, N2MAU, K4RB, W4BYG, NL7TB, WX7K, BV/N0IAT, 9K2HN, DJ5AV & DX News Letter, DL8OBC, EA5BY, EI6HB, F5SHQ, F6AJA, G4BUE & DX

News Sheets, ON6TT, PS7AB, XE1KK, YV5AMH and ZL1ANJ for the following DX information.

D4, CAPE VERDE. Didier, 6W/F5OGL, and Christian, 6W1QV, will try to be active from here Februay 26th to March 4th.

J2, DJIBOUTI. Dominique, F5RYC, is reported to be heading back here and will be active as J28YC. QSL via F6EJI.

MU0, GUERNSEY. Mathieu, F5SHQ, reports to OPDX that he is now active from here with the callsign 'MU0ASP'. He will be there for a few months. He is active on 20, 30 and 40 meters mostly on CW.

WP2, VIRGIN ISLANDS (U.S.). Operators KE2VB, K2ZJ and K2ZL will be active as WP2Z during the ARRL DX Phone Contest (March 1-2nd). The WP2Z will be a Multi 2 entry for the contest.

ZL, NEW ZEALAND. Look for operators Tapani, OH5BM, and Martin, ZL1ANJ, to be active as ZL1ANJ as a MultiOp-Single Transmitter enrty in the ARRL DX Phone Contest. Operations are planned to be on 80-10 meters.

ZK1, SOUTH COOK. The 'DX News Letter' reports that VE6JO is expected to be active from February 22nd until March 10th. They state he holds a valid licence, but he has to borrow equipment on the island.

COMING EVENTS

FEBRUARY 23rd WYONG FIELD DAY - COME AND SEE US

SAGEM TELEPRINTER PART WANTED

VICTOR VK3BVJ IS LOOKING FOR A 'MODULE BOARD' FOR A SAGEM

TX20 TELEPRINTER. IF YOU HAVE ONE OF THESE BOARDS FOR

DISPOSAL YOU CAN EITHER SEND A MESSAGE TO COL VK2CTD AT VK2WI

WHO WILL PASS IT TO VICTOR DURING THE SUNDAY CAST CALLBACKS.

OR YOU CAN CONTACT VICTOR VK3BVJ QTHR.

ALSO YOU COULD BRING THE MODULE TO THE CENTRAL COAST FIELD DAY

AND GIVE IT TO COL ON THE ANARTS STAND FOR ONWARD RELAY TO

VICTOR.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065

Australia, for such matters as membership and general

enquiries. Enquiries can also be made by packet to the

President (Col) VK2CTD at VKWI2, or the Secretary (Pat) VK2JPA

at VK2WI.

News items may be sent to Broadcast Officer PO Box 60

Blacktown 2148 Australia, or fax to (02) 9672-3392, or by

packet to VK2JPA at VK2WI.

Email addresses

Broadcast Officer : patl@pitt.conmusic.su.oz.au

or patl@extro.ucc.su.oz.au

President :

colin.davies@dse.com.au

or cdavies@sunink.com

The Society welcomes news items on any digital subjects from

anywhere in the broadcast coverage area. We are looking for-

ward to news from your areas to let other amateurs know what

you are doing in the hobby. Hope to hear from you.

>While listening to your favorite music, don't be
>suprised if you hear those strange and annoying
>sounds of that terrible Morse code!

Actually, that should be "while listening to your favorite OLD music"
since all the examples you mentioned are at least 10 years ancient.

If you're looking for something a bit more modern (as in "Modern Rock"),
check out the latest Pearl Jam CD.

The title? "No Code."

Joop
AEA is out of business, but the product lines are being sold and there
will be announcements in the near future. I assume the packet/digital
line will be among the survivors.

The rest of you guys...use proper net manners or get lost!!!

I plan on buying a new HF rig and would appreciate any opinion on the FT-840. Is it worth $700-$800? Some people have told me it was designed for moble use in mind. I would like to use it as a base. If anyone has one please let me know what you think.

Thanks,
AL

4916. Morse Code in Music

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-01 00:00:00 UTC
From: ka3vsp@voicenet.com
Message-ID: <5f862l$d6s@news1.voicenet.com>
Source record: 203352

Morse Code in Music

While listening to your favorite music, don't be
suprised if you hear those strange and annoying
sounds of that terrible Morse code!

Case in point, on Joe Walsh's solo album
"Songs for a Dying Planet" is a song titled
"Vote For Me". The song is preceded with Morse
code which pounds out "REGISTER AND VOTE FOR ME AR".
Brian, KF2HC, states that the same message appears
on Joe's first album "Barnstorm" in a song titled
"Mother". Joe holds an Advanced class Amateur license.

Another album worth noting is Roger Waters' album
"Radio Kaos". This album is filled with Morse messages.
Most of the code is underlying the haunting music and
very difficult to copy. The album's cover is littered
with Morse code characters which spell out the album's
song titles!

The rock band RUSH has a song title "YYZ" on their album
"Moving Pictures". This songs starts out with heavy
percussion belting out "YYZ" followed by bass and
guitar blaring out the same. Well, the characters YYZ are
the beacon identifier for the Toronto International Airport.
The inspiration for the song came from Alex Lifeson, the
guitarist for the band, who holds a private pilots license.

Carter Bennett, KI5SR, adds that there is badly formed
Morse code on Kate Bush's album "Hounds of Love".
Carter informs me that the song "Watching You Without Me"
contains the code "SOS". It was also reported that this
track has some RTTY going in and out of tune. KI5SR continues
with information regarding the album "Saving the Wildlife"
by Mannheim Steamroller. He states that there is a track
on the album which sounds too much like "CQ" in Morse.

Charlie, N2JQA, says that there is Morse Code on
Ronnie Montrose's album (Elektra 1982 EI-60034) "GAMMA 3".
The song "Stranger" contains Morse Code which spells
"STRANGER".

Wayne, WA6MPG, states that in 1967, the band
"PEARLS BEFORE SWINE" recorded a song with an adult-rated

CW message in it. The song was titled "MISS MORSE".
The song is said to have vulgarities in it spelled out
with Morse Code. The album was titled "ONE NATION UNDERGROUND".

Randall, KE0YG, provided the following info about Morse Code
in the computer game called "RED STORM RISING" by Microprose.
Randall says that in the opening credits there is music
which contains Morse Code which spells out
"THE RUSSIANS ARE COMING" at about 18 WPM.
Randall says that he can confirm this on the C-64 version
and he believes that the IBM version plays the CW message
in the theme song.

Craig, VK3CRA, reports a TV show called "INSPECTOR MORSE".
Craig has never seen the show but, from info gathered, states
that the inspector's name is never given in the show. It is
alleged, however, to be contained in Morse Code which is played
as part of the show's introductory music.

Howie, N2WX and Mark, KM6XU, claims that "Radioactivity" by
Kraftwerk has lots of good Morse code in it. Mark also states
that the band Missing Persons has a song with some code in it
but Mark didn't supply any info on the song.

A message from John, NI6D, says that there is pseudo Morse
code in the song "Radio Silence" on Thomas Dolby's album
titled "The Golden Age of Wireless".

Dave, N0DET, adds that there is code in the song
"Planet Claire" by the B-52's. In the intro to "Planet Claire",
a kind of Spy vs. Spy mood is created by the music,
and plainly audible CW. The Morse code says,
"NAKS DE CFH I I ZKR F13395 5156 AS 662 ....,", then fades
to music. Dave believes that 'NAKS' and 'CFH' are
commercial station callsigns.
More information pertaining to the code comes in from Ron,
VE3RYN. Ron says that "NAKS" should be "NAWS" which stands
for 'North Atlantic Weather Station' and "CFH" is a CDN
military ship/shore station located near Halifax, Nova
Scotia.

Michael, W9OJ, claims that the words "love you" are
spelled out in morse code at the end of the "Iron Butterfly
Theme" Iron Butterfly. This song is on their first album
"Heavy" and is also on the double album titled "Rare
Flight".

Ian, VK2IAQ, writes in with information stating that
the UK rock band 'Barclay James Harvest' has two songs
which contain morse code. Ian states that the song
"Nova Lepidoptera", a sci-fi song from the 1977 album "XII",
starts off with "UFO" repeated in slow morse code.

Also, the title track of the album "Ring of Changes"
starts with the title sent twice in morse code.
John Lees, the lead guitarist, is a licensed amateur operator
in the UK.

Bill, WA6ITF, reports some really good Morse code on
the CD "SEEK YOU" by Andrew, G3WZZ, and Lissa Huddleson.

Duane, KA9HKL, states that there is 20+ wpm cw in
"I Can Move A Mountain" by The Blues Magoos, The message
says "I can move a mountain", it is sent twice in somewhat sloppy
code. The song was origionally released on the Mercury album
"Basic Blues Magoos" #61167 in May of 1968. It can also be found on
"Kaleidescope Compendium" CD Mercury 314 512 313-2. A very 60's
psychedelic collection of songs. This band is probably best known for
"(We Ain't Got) Nothin' Yet".

Danny, K7SS, informs me that he did a tune on an album called the
SEATTLE SYNDROME in 1981. It was a compilation of local bands,
just prior to the grunge explosion in Seatte. The song was
"21.252" and was done back when 21.25 was the band edge of 15 meters.
It features some great JA pileups mixed with instrumental sax etc.
The group's name was "K7SS" and was a duo of myself and James Husted.

One of the more interesting examples of Morse Code in Music,
adds Chris AA9HD, is the song "Pencil Rain" by They Might Be Giants.
In the middle of this song, there is a bit of code that spells
"Ay, Ay, Ay, Ay, canta y no llores".
Translated to English, it means "Ay, Ay, Ay, Ay, sing and don't cry".
The name of this song is "Cielito Lindo", which means
"Pretty Little Sky."

Well, that's about it for now. Thanks to all who have provided
me with information on this subject and thanks to all who
have inquired abt the subject.

73 de Brian Pasternak

TRASH & TREASURE SALE

Because the last Sunday in March is Easter Day, the March Trash & Treasure Sale will be held on the Sunday After Easter - that's the 6th of April.

--Submitted by Eric Fossey VK2EFY - Divisional Secretary.

THE AFFILIATED CLUBS NET IS BACK

The Affiliated Clubs Net is to be resumed on the third Wednesday of the Month commencing 16 March at 7.30 pm EST on 3.595 MHZ plus or minus QRM.

So clubs I hope to see at least one and possibly more from each club on air.

--Ken Westerman VK2AGW, Affiliated Clubs Officer.

(NB: The text of this news item did say "third Wednesday", but the 16th March is actually a Sunday. We'll check with Ken and give you the correct date information in next week's broadcast...)

DIVISIONAL ELECTIONS

The Elections for the 1997-1998 Council of the Wireless Institute of Australia New South Wales Division will be held in association with the Annual General Meeting on the 19th April 1997.

Nominations for the council are now open and they will close NEXT SATURDAY at 12 noon sharp.

The Divisional Office will be open that day as well as it's normal opening hours, which will be given elsewhere in the broadcast.

A notice to intending candidates:

It is not the duty of the dvisional office staff or the divisional returning officer to obtain proposers and/or seconders for candidate's nomination forms. Any member wanting to stand for election to council must find their own proposer and seconder.

The Office's telephone number is (02) 9689-2417
The Office's fax number is (02) 9633-1525
The Office's free call number is 1800 817-644
The Divisional Office's address is
109 Wigram Street, Parramatta
P.O. Box 1066, Parramatta N.S.W. 2124

--Peter O'Connell VK2EMU, Divisional Returning Officer

WICEN NEWS

Phil VK3XQP advises that after 2 years of work, the VK2RWB 2 metre repeater located on the Victorian/New South Wales border at Yarrawonga is finally in operation. This repeater, operating on 147.200, is located on Mt Oominoominah (also known as Mt Gwynn) and is a solar powered system.

It helps to fill in a gap along the Murray River that existing repeaters were very patchy in servicing. The repeater operates under the auspices of the Murray Region of WICEN (NSW) and was built predominately by Peter VK3MU and Hilton VK3AHY, with assistance from many others.

This month sees the Central Coast meeting, on the 14th, and the Hunter meeting, on the 17th; the latter meeting will feature a talk by Telstra. Although not strictly a WICEN event, of interest to WICEN members is the Wyangala Triathlon, in the Orange area, to be held on Sunday 16th March; enquiries are directed towards Peter VK2ETK or Adam VK2XRA. Following this is the VRA Mid Year Conference, at Wombeyan Caves, on the weekend of 22nd-23rd March, at which WICEN will be well-represented. On 13th April is the Forster Triathlon. This is an all-day event, early morning to late evening, and about 25 operators are required for this event; food, drink, fuel and T-shirt are provided. Operators will need to bring equipment for 2m and 70cm voice, and will also need to contact Richard VK2CHC for further details. Following this is the Watagan Mountains Car Rally, over the weekend of 19-20th April, for which Andy VK2XRX is the contact; around 20 people are required for this exercise.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or info they would like published, then please contact the Publicity Officer. If further information about WICEN (NSW) is required, please contact the State Coordinator, Alan VK2YYJ, on 015-097-217.

--Dave Horsfall VK2KFU, WICEN (NSW) Publicity Officer

DX NEWS

ANTARCTICA Prabhu VU2AXA/p, will be active from Maitri Base at Indian Bay until March 4.

EASTERN MALAYSIA - From mid-March 9M6TCR and 9M6TPR will be active from Sabah, Malaysia.

ZAIRE - 9Q5PA will be active for the next 15 months.

QATAR - Chris A71CW, will be finishing operations there by the end of March, when he travels to Oman, A4. No callsign information as yet is available.

GUERNSEY - Listen for MU0ASP on CW; he expects to be there for
several months.

DJIBOUTI - Dominique F5RYC is active as J28YC.

MIDWAY ISLAND - Astronaut Chuck Brady N4BQW, will be active from
there February 27 to March 6, during the closing of the historic Midway
Island Naval Station. He intends on bringing HF and 2 meter equipment.
There is also the possibility of some RTTY operation. The callsign he will
use is unknown at this time. Check PacketCluster spots for the latest
information.

ANTIGUA - Team Antigua will be active again around the ARRL
International DX Phone Contest between February 27 and March 4. Look
for stations with the prefix "V26".

BRITISH VIRGIN ISLANDS - John KK9A will be active as VP2V/KK9A
during the ARRL International DX Phone Contest. He intends on operating
as a Single Band entry. He may also be found on 80 and 40 meters before
and after the contest.

--ARRL DX Bulletin #11, dated 27th February, 1997

HAARP TO AIR TEST TRANSMISSION FOR HAMS

The High Frequency Active Auroral Research Program (HAARP) facility in
Gakona, Alaska, will transmit a test signal on March 8, 1997, seeking
reports from hams and SWLs in Alaska and in the ''Lower 48'' to determine
how well the HAARP transmissions can be heard to the south.

During this test, the HAARP facility will transmit on or near the frequencies
3.4 MHz and 6.99 MHz to give listeners the opportunity to listen for the
HAARP facility and to claim a QSL card. The test will be conducted
beginning at 0430 UTC on March 8 (2330 Eastern Time on March 7).

The format of the test will be to transmit a constant carrier (no modulation)
signal followed by a CW message at 10 WPM, according to the following
schedule:

TIME FREQ SIGNAL ANTENNA POSITION
0430 6.99 MHz Carrier only Pointed up
0435 6.99 MHz CW message Pointed up
0440 6.99 MHz Carrier only Pointed to SE
0445 6.99 MHz CW message Pointed to SE
0450 3.4 MHz Carrier only Pointed up
0455 3.4 MHz CW message Pointed up

The transmission beginning at 0450 is primarily for Alaskan hams.
Reception reports should include signal strength during the constant carrier
transmission period along with the text of the CW message.

Complete details on this test and a QSL address will be listed on the
HAARP home page at http://server5550.itd.nrl.navy.mil/announce.html.

The HAARP facility--now in the developmental prototype stage--has been undergoing testing since it was completed in late 1994. Multiple transmitters feed multiple antenna elements (there are 48 antenna elements on the site, arranged in eight rows of six columns; however, at this time, only 18 elements are active. The test will use 17 antennas with a net transmitter power of 340 kW). The final configuration could have 180 antenna elements and a combined transmitter power of 3.6 MW. HAARP's stated scientific purpose is to study ''the properties and behavior of the ionosphere, with particular emphasis on being able to understand and use it to enhance communications and surveillance systems for both civilian and defense purposes.'' HAARP is managed by the US Air Force and the US Navy.

For more information, see ''The High Frequency Active Auroral Research Program'' (QST, Sep 1996, p 33), or check out the HAARP home page, via the VK2 Division's Web links page (Research Projects section)

-- ARRL Special Bulletin no. 5, dated 21 February

SURPLUS COMMERCIAL RADIO EQUIPMENT AUCTION

Owing to the imminent closure of its Mortlake Gas Works site, the Australian Gas Light Company will be selling a wide range of surplus equipment through an auction to be held on Tuesday March 4 & Wednesday March 5, 1977.

The vast majority of stock to be auctioned comprises items such as gas fittings, gantry cranes, compressors & other gas industry items which may or may not be of interest to amateurs.

However, this bundle of goodies includes one lot of surplus VHF High Band two-way radios & associated equipment.

The first lot comprises over 200 items of radio equipment & occupies 3 pallets.

Brands include AWA, Philips, Motorola, Tait, Willis & Syntrx.

Please note that this gear will only be sold as one lot, that is, you must purchase all three pallets if you submit the winning bid. Radios will not be auctioned as individual items.

The lot numbers for radio gear is : 1194

A second lot includes two communication trailers, both stripped of radio gear. Perhaps they could be used for WICEN.

Lot numbers for the trailers are 1134 and 1135

The details of the auction are as follows:

Location: AGL Mortlake Gas Works, Tennyson Rd Mortlake (near Concord), NSW

Date: Tuesday March 4 & Wednesday March 5, 1997.

For a precise date and approximate time at which the radios will be auctioned, please contact the auctioneers.

The auctioneers are Peter Gallagher (0419) 401-376 & Terry Buckley (018) 614-218.

--Colin Cool VK2AXX

CLUB NEWS

BAR-B-QUE LUNCH.

THE CONFERENCE SHOULD CONCLUDE AROUND 3.00PM IF YOU
HAVE A FREE SUNDAY PLEASE ATTEND. THE MORE PEOPLE - THE
MORE SUCCESSFUL THE CONFERENCE WILL BE.

--CORRY TAYLOR, Secretary

ORANGE & DISTRICT AMATEUR RADIO CLUB

The Orange Club still needs more two-metre operators for their big communications exercise "Wyangala 1997" on Sunday 16th March, only two weeks off. It is for the NSW State Cup Long-Course Triathlon Championships near Cowra and a field of about 400 competitors is expected, who face a very busy morning's work, like a 7am 2km swim race in Wyangala Dam, then an 80km cycle race up and down the hills to Woodstock and back and then a 20km run across the Dam wall and around the village! (Couldn't do it myself, but it's great to watch them at it, -- especially in that lovely country!)

Hey! Why not get together with your 2-metre FM mates, take a day's real break and help with this exercise? Anyway, get onto these Orange guys URGENTLY to register with them. Many thanks to those who have already signed on, but we are still waiting for quite a few to complete and return those registration forms.

Peter VK2ETK and Adam VK2XRA are the event coordinators and here are six different ways to contact them:

Telephone: 063 61 3439 or 063 61 2264
Mobile phone: 015 259 670

TRASH & TREASURE SALE

Because the last Sunday in March is Easter Day, the March Trash & Treasure Sale will be held on the Sunday After Easter - that's the 6th of April.

--Submitted by Eric Fossey VK2EFY - Divisional Secretary.

THE AFFILIATED CLUBS NET IS BACK

The Affiliated Clubs Net is to be resumed on the third Wednesday of the Month commencing 16 March at 7.30 pm EST on 3.595 MHZ plus or minus QRM.

So clubs I hope to see at least one and possibly more from each club on air.

--Ken Westerman VK2AGW, Affiliated Clubs Officer.

(NB: The text of this news item did say "third Wednesday", but the 16th March is actually a Sunday. We'll check with Ken and give you the correct date information in next week's broadcast...)

DIVISIONAL ELECTIONS

The Elections for the 1997-1998 Council of the Wireless Institute of Australia New South Wales Division will be held in association with the Annual General Meeting on the 19th April 1997.

Nominations for the council are now open and they will close NEXT SATURDAY at 12 noon sharp.

The Divisional Office will be open that day as well as it's normal opening hours, which will be given elsewhere in the broadcast.

A notice to intending candidates:

It is not the duty of the dvisional office staff or the divisional returning officer to obtain proposers and/or seconders for candidate's nomination forms. Any member wanting to stand for election to council must find their own proposer and seconder.

The Office's telephone number is (02) 9689-2417
The Office's fax number is (02) 9633-1525
The Office's free call number is 1800 817-644
The Divisional Office's address is
109 Wigram Street, Parramatta
P.O. Box 1066, Parramatta N.S.W. 2124

--Peter O'Connell VK2EMU, Divisional Returning Officer

WICEN NEWS

Phil VK3XQP advises that after 2 years of work, the VK2RWB 2 metre repeater located on the Victorian/New South Wales border at Yarrawonga is finally in operation. This repeater, operating on 147.200, is located on Mt Oominoominah (also known as Mt Gwynn) and is a solar powered system.

It helps to fill in a gap along the Murray River that existing repeaters were very patchy in servicing. The repeater operates under the auspices of the Murray Region of WICEN (NSW) and was built predominately by Peter VK3MU and Hilton VK3AHY, with assistance from many others.

This month sees the Central Coast meeting, on the 14th, and the Hunter meeting, on the 17th; the latter meeting will feature a talk by Telstra. Although not strictly a WICEN event, of interest to WICEN members is the Wyangala Triathlon, in the Orange area, to be held on Sunday 16th March; enquiries are directed towards Peter VK2ETK or Adam VK2XRA. Following this is the VRA Mid Year Conference, at Wombeyan Caves, on the weekend of 22nd-23rd March, at which WICEN will be well-represented. On 13th April is the Forster Triathlon. This is an all-day event, early morning to late evening, and about 25 operators are required for this event; food, drink, fuel and T-shirt are provided. Operators will need to bring equipment for 2m and 70cm voice, and will also need to contact Richard VK2CHC for further details. Following this is the Watagan Mountains Car Rally, over the weekend of 19-20th April, for which Andy VK2XRX is the contact; around 20 people are required for this exercise.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or info they would like published, then please contact the Publicity Officer. If further information about WICEN (NSW) is required, please contact the State Coordinator, Alan VK2YYJ, on 015-097-217.

--Dave Horsfall VK2KFU, WICEN (NSW) Publicity Officer

DX NEWS

ANTARCTICA Prabhu VU2AXA/p, will be active from Maitri Base at Indian Bay until March 4.

EASTERN MALAYSIA - From mid-March 9M6TCR and 9M6TPR will be active from Sabah, Malaysia.

ZAIRE - 9Q5PA will be active for the next 15 months.

QATAR - Chris A71CW, will be finishing operations there by the end of March, when he travels to Oman, A4. No callsign information as yet is available.

GUERNSEY - Listen for MU0ASP on CW; he expects to be there for
several months.

DJIBOUTI - Dominique F5RYC is active as J28YC.

MIDWAY ISLAND - Astronaut Chuck Brady N4BQW, will be active from
there February 27 to March 6, during the closing of the historic Midway
Island Naval Station. He intends on bringing HF and 2 meter equipment.
There is also the possibility of some RTTY operation. The callsign he will
use is unknown at this time. Check PacketCluster spots for the latest
information.

ANTIGUA - Team Antigua will be active again around the ARRL
International DX Phone Contest between February 27 and March 4. Look
for stations with the prefix "V26".

BRITISH VIRGIN ISLANDS - John KK9A will be active as VP2V/KK9A
during the ARRL International DX Phone Contest. He intends on operating
as a Single Band entry. He may also be found on 80 and 40 meters before
and after the contest.

--ARRL DX Bulletin #11, dated 27th February, 1997

HAARP TO AIR TEST TRANSMISSION FOR HAMS

The High Frequency Active Auroral Research Program (HAARP) facility in
Gakona, Alaska, will transmit a test signal on March 8, 1997, seeking
reports from hams and SWLs in Alaska and in the ''Lower 48'' to determine
how well the HAARP transmissions can be heard to the south.

During this test, the HAARP facility will transmit on or near the frequencies
3.4 MHz and 6.99 MHz to give listeners the opportunity to listen for the
HAARP facility and to claim a QSL card. The test will be conducted
beginning at 0430 UTC on March 8 (2330 Eastern Time on March 7).

The format of the test will be to transmit a constant carrier (no modulation)
signal followed by a CW message at 10 WPM, according to the following
schedule:

TIME FREQ SIGNAL ANTENNA POSITION
0430 6.99 MHz Carrier only Pointed up
0435 6.99 MHz CW message Pointed up
0440 6.99 MHz Carrier only Pointed to SE
0445 6.99 MHz CW message Pointed to SE
0450 3.4 MHz Carrier only Pointed up
0455 3.4 MHz CW message Pointed up

The transmission beginning at 0450 is primarily for Alaskan hams.
Reception reports should include signal strength during the constant carrier
transmission period along with the text of the CW message.

Complete details on this test and a QSL address will be listed on the
HAARP home page at http://server5550.itd.nrl.navy.mil/announce.html.

The HAARP facility--now in the developmental prototype stage--has been undergoing testing since it was completed in late 1994. Multiple transmitters feed multiple antenna elements (there are 48 antenna elements on the site, arranged in eight rows of six columns; however, at this time, only 18 elements are active. The test will use 17 antennas with a net transmitter power of 340 kW). The final configuration could have 180 antenna elements and a combined transmitter power of 3.6 MW. HAARP's stated scientific purpose is to study ''the properties and behavior of the ionosphere, with particular emphasis on being able to understand and use it to enhance communications and surveillance systems for both civilian and defense purposes.'' HAARP is managed by the US Air Force and the US Navy.

For more information, see ''The High Frequency Active Auroral Research Program'' (QST, Sep 1996, p 33), or check out the HAARP home page, via the VK2 Division's Web links page (Research Projects section)

-- ARRL Special Bulletin no. 5, dated 21 February

SURPLUS COMMERCIAL RADIO EQUIPMENT AUCTION

Owing to the imminent closure of its Mortlake Gas Works site, the Australian Gas Light Company will be selling a wide range of surplus equipment through an auction to be held on Tuesday March 4 & Wednesday March 5, 1977.

The vast majority of stock to be auctioned comprises items such as gas fittings, gantry cranes, compressors & other gas industry items which may or may not be of interest to amateurs.

However, this bundle of goodies includes one lot of surplus VHF High Band two-way radios & associated equipment.

The first lot comprises over 200 items of radio equipment & occupies 3 pallets.

Brands include AWA, Philips, Motorola, Tait, Willis & Syntrx.

Please note that this gear will only be sold as one lot, that is, you must purchase all three pallets if you submit the winning bid. Radios will not be auctioned as individual items.

The lot numbers for radio gear is : 1194

A second lot includes two communication trailers, both stripped of radio gear. Perhaps they could be used for WICEN.

Lot numbers for the trailers are 1134 and 1135

The details of the auction are as follows:

Location: AGL Mortlake Gas Works, Tennyson Rd Mortlake (near Concord), NSW

Date: Tuesday March 4 & Wednesday March 5, 1997.

For a precise date and approximate time at which the radios will be auctioned, please contact the auctioneers.

The auctioneers are Peter Gallagher (0419) 401-376 & Terry Buckley (018) 614-218.

--Colin Cool VK2AXX

THE CONFERENCE SHOULD CONCLUDE AROUND 3.00PM IF YOU
HAVE A FREE SUNDAY PLEASE ATTEND. THE MORE PEOPLE - THE
MORE SUCCESSFUL THE CONFERENCE WILL BE.

--CORRY TAYLOR, Secretary

ORANGE & DISTRICT AMATEUR RADIO CLUB

The Orange Club still needs more two-metre operators for their big communications exercise "Wyangala 1997" on Sunday 16th March, only two weeks off. It is for the NSW State Cup Long-Course Triathlon Championships near Cowra and a field of about 400 competitors is expected, who face a very busy morning's work, like a 7am 2km swim race in Wyangala Dam, then an 80km cycle race up and down the hills to Woodstock and back and then a 20km run across the Dam wall and around the village! (Couldn't do it myself, but it's great to watch them at it, -- especially in that lovely country!)

Hey! Why not get together with your 2-metre FM mates, take a day's real break and help with this exercise? Anyway, get onto these Orange guys URGENTLY to register with them. Many thanks to those who have already signed on, but we are still waiting for quite a few to complete and return those registration forms.

Peter VK2ETK and Adam VK2XRA are the event coordinators and here are six different ways to contact them:

Telephone: 063 61 3439 or 063 61 2264
Mobile phone: 015 259 670
Facsimile: 063 62 2782
Internet e-mail: aroberts@ix.net.au
Packet BBS: vk2etk@vk2tlh.#ct.nsw

-
Here is a summary of news items covered on edition #205 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 7-Mar:
-
1. MIREX QSO Unaffected by Fire Aboard Mir, All Occupants Safe
2. New Legislation Signed in Wyoming, Protects Antenna Rights
3. FCC to Re-offer Vanity Call Signs Comfiscated or Returned
4. Marconi Memorabilia Auction in London Called Off
5. Web Site Adds "This Week" Program File in "RealAudio" Format
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. Industry Canada Stalls RAC Plan to Privatize Amateur Services
8. "Computer Virus Awareness Month" Runs to Mid-March
9. "The RAIN Dial-up" from Chicago
10. Weekly Propagation Forecast
11. Special Event Station Calendar
12. AMSAT Scrambles to Raise $150,000 for Phase 3D Satellite Launch
13. "Worked All Analog Satellite" Award Offered Through June
14. RAC Announces Ontario Section Manager Election Results
15. "RealVideo" Program Offered for Home Computers
16. "This Week" Begins Fifth Year - A History Lesson
-
Funding for the program's transmission and production expense was
provided this week by a grant from the Stoddard Family and users of
the N9SBH repeater, in North Webster, Indiana, where "This Week in
Amateur Radio" is heard on 224.16 MHz and on 147.445 MHz simplex,
serving North Webster, Goshen, Warsaw, Plymouth, and Syracuse.
Presentation of "The RAIN Dial-up" has been made possible by a
grant from Matt Arthur, KA0PQW, of Ellendale, Minnesota.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EST) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier. On the Internet,
```

audio is available each Sunday in 8-bit .WAV file format, sampled at 11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm through the courtesy of the Blue Ridge Video and Digital Society of Roanoke, VA. A separate "RealAudio" file is also available at this site. The service is carried on VHF/UHF repeaters throughout North America and on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

-

Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

please allow for forwarding delays in the network.

If submitting printed copy, please use a dirty old dot matrix printer and an ornate font, so that it comes through the fax looking nothing like the original. No need to check the spelling or punctuation, or even whether what you write makes grammatical sense - the Broadcast Officer loves to spend his weekends deciphering secret codes.

Contributors are invited to see just how unreadable they can make their news items before the Broadcast Officer gives up and throws them in the bin. Who cares if the announcer can't make sense of your news item - nobody listens to it anyway, but don't worry, your poor spelling, punctuation, and grammar will be reproduced on packet and Internet for all Amateurs to see...

*Jeffrey Herman <jeffreyh@Hawaii.Edu> wrote in article

** Hi RJH - Don't be too hard on old Spew. While working at Coast Guard
** Monterey monitoring 2182 kHz (and a dozen other frequencies) I'd
** nightly have to listen to the drunk Mexican fishing boat crews sing to
** each other on 2182 (the international SSB distress and calling freq'y).
** After their voices gave out they'd play with their radio's Auto Alarm
** signal causing teletypes to come alive up and down the West and Gulf
** Coasts. Quite a large number of boats in their fleet would wreck havic
** nightly on this distress frequency. These folks have no knowledge/respect
** for international communication laws.

*Jeff,
*While it is generous to state that the behavior is "certainly undesirable,"
*you have to recognize that most of those fishermen have no more
*than an elementary school education (at best) ... they come, in most
*cases, from the poorest of the poor families ...
*What I'm saying is that they don't know any better because nobody
*has educated them to know better ... they in all probability have
*never been told in a way that they understand that "this frequency is
*ONLY for emergencies, don't 'chit-chat' there" What they've probably
*been told is simply "keep your radio on this channel at all times and
*keep your ears open, too, in case someone calls for help."
*Again, I'm not trying to say what they do is "OK" ... just that it's not
*entirely fair to state that their action is motivated by a lack of repect
*for the law or a desire to be intentionally disruptive. Also, I recognize
*that there are a few bad apples in every barrel and that a few may
*deliberately behave that way "to piss off the gringos."

Hi Carl - At age 15, after being cited by the Orange County Sheriffs
for riding a dirt bike on a residential street (no license), I was
taught something by the judge: Ignorance of the law is no excuse.

Yet, I'm not so sure those fishermen were ignorant of the proper use
of 2182 kc - we'd periodically copy a "mayday" from them on that freq'y
so someone must have told them it was an emergency channel.

I remember now that your wife is Mexican - I didn't mean to offend
her or anyone else from Mexico; my remarks concerned just the singing
fishermen on 2182.

I think we both know what it's like to be isolated on a boat for
a long period of time - a voice on the radio becomes something to
treasure. But surely someone in the Mexican fishing fleet must
have known the proper channel for ship-to-ship singing - they

could have spread the word to the rest of the fleet.

(Oh no - I see I used "kc" above - now you'll call me a retro-
technocrat or some other such nonsense!)

73, Jeff KH2PZ

Source record: 203362

Anyone wishing to register opposition for the ARRL/AMSAT submission should send a brief e-mail message to wrc97@fcc.gov. The Subject line should say "Reference No. ISP-96-005 IWG-2A." A simple statement to this effect, "I oppose the ARRL/AMSAT opposition to the NVNG MSS flexible allocation proposal," will be included in the public record and will help to drive home the point that there is broad-based approval to well conceived sharing proposals. It ought to be clear to the FCC the public good is poorly served by allowing hams exclusive use of these valuable frequencies.

Please note! The proposals the League opposes are not FCC proposals, nor are
they endorsed by any other branch of the government. They are industry proposals. The League's objective is to falsely demonstrate there is broad citizen opposition to the industry proposals.

Additional arguments or evidence also is welcome. Important! Comments should
reach the FCC no later than March 4, 1997!

If it were just "one" service that had discontinued Morse, I would agree. But the fact is that nearly EVERY service has abandoned Morse in favor of more modern modes...except for those "crusty old ham operators" who still REQUIRE it's knowledge for purposes of simply obtaining a license.

>Hams dropped AM in the 60s and the FCC eliminated AM from the marine
>bands in the mid-70s, yet every nation world-wide is still using
>AM for its domestic and external ("shortwave") broadcasts.

Apples and oranges. AM is a type of phone modulation, chosen for it's superior characteristics at long distances over FM. By comparison, Morse is a primitive method of communication using mechanical noises to represent letters & numerals. Not the same at all.

Here's another telling sign of how Morse has become obsolete:

Remember back when "kiddie-talkies" (cheap regenerative walkie-talkies for children) had Morse code keys on them? All but the most inexpensive units contained a bar or button on the front, right next to the Morse alphabet.

You don't see that anymore.

SB DX @ WW $OPDX.294
Ohio/Penn DX Bulletin No. 294

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 294
BID: $OPDX.294
March 3, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K2BF, N3SL, 9K2HN, DJ5AV & DX News Letter, DL3ABL, F6AJA, G4BUE & DX News Sheets, I4LCK, JH2PDS/1, LA6WEA, OZ8RO, SP6ECA, VE6NU, VK3EW and ZS1AEC for the following DX information.

3Y, BOUVET. The "DX News Sheet" reports Kaare, LA2GV, was active for only three hours during the morning of February 22nd as 3Y2GV, on 18090 kHz QSX 5/6 up, working Europe. Kaare, (who was a member of the first Peter 1 DXpedition), was travelling on a Norweigan Antarctic ship and was unable to give any warning of the operation. QSL to home call. Meanwhile, the South Sandwich Island Antarctic DX Group 1997/98 operation will depart Cape Town January, 1998, on the 67 metre vessel called "Afrique du Sud", and be active for 12 days. Tony, WA4JQS, and Barry, ZS1FJ, are planning the operation which will cost US $100k.

9M6, MALAYSIA. Charlotte, KQ1F, and Paul, K1XM, will be operating from Sabah starting in mid-March. Their callsigns are 9M6TCR and 9M6TPR respectively. This is a combined scuba-diving and amateur radio trip. They will bring a small station consisting of an Icom IC-735 and Cushcraft AP-8 vertical. Operation is planned from three islands, all using the same callsigns: Borneo, Sipadan and Layang Layang. QSL all via KQ1F.

C6, BAHAMAS. Andrea, DL3ABL, and Michael, DL6MHW, are going to The Bahamas for their spring holiday. They will be staying on New Providence from March 24th until April 4th. They plan to give a contact to anyone who needs C6. If possible, they will focus on the Japanese, who seem to be hardest to reach. Their expected calls are C6A/DL6MHW and C6A/DL3ABL. Using a ICOM 706, a Butternut HF6 and some wires for the low bands, they will be active on CW/SSB on all HF-bands (especially look for them on 14260 kHz). Andrea is also going to take part in the CQWW WPX Contest during their time there. QSL via the bureau or direct to: Andrea Diekmann, Bruno-Taut-Ring 56,

D-39130 Magdeburg, Germany.

FINAL TALLY FROM V5. The recent Namibian V5 operations by W0YG, KV0Q, WB0HBS and W8UVZ is now history. Nearly 4000 QSOs were made before and after the ARRL CW Contest, with an emphasis on the low bands. In fact, nearly 1300 QSOs were made on 160 meters including the first ever V5 Japanese QSOs. The operators worked every state except KL7, on top band (including one KH6 QSO). During the ARRL CW Contest, nearly 3500 QSOs were made on all 6 bands. QSL routes are as follows:
V5/ZS6YG via W0YG (formerly KY0A)
V5/W8UVZ via W8UVZ home call.
V51Z direct only via ZS6EZ.
Meanwhile, Charlie, W0YG, who is a professional photographer, is still in Africa and will not be back to Colorado until March 10th. The V5/ZS6YG QSL will be a photo card to be printed AFTER his return. Therefore, QSLing is not expected to begin until mid-April at the earliest.

FR, REUNION ISLAND. Guy, F5MNW, will be active as FR/F5MNW or TO5UFT from here March 22nd to April 6th. He will be mostly active on CW. Also, look for FR/IK2GNW to be active, especially on 80 and 160 meters from March 15-20th.

HF0POL, SOUTH SHETLAND ISLANDS (UPDATE). The operator at the HF0POL station is Mark, SP3GVX. He is active mostly on CW +7 kHz from the band edge and can be found on the band around 0100z and later. During his daytime hours he is very busy in the camp. This is the Antarctic summer, and he has a lot of work to do. More activity will come later in the year. His equipment is a FT-757 and Atlas, amp. 1kW, 2 PC's. Currently he has only simple wire antennas because all previous antennas were broken. His antenna farm is very swampy right now because of the summer. QSL via SP3FYM to receive a very nice colored QSL with a view of the camp site. Correct SP3FYM's address: Henryk Karwowski SP3FYM, P.O.Box 832, 66 400 GORZOW WLKP, POLAND.

HS9, TERUTAO ISLAND (NEW IOTA). The South Thailand DX Group and the Diamond DX club ITALIA are organizing an IOTA DXpedtion to this island located in the Butang Group. Look for operators HS0/IK4MRH, I4LCK, E21AOY/8 and HS1ASN, from March 14-22th, using a special callsign HS9AL. They will be active with two stations SSB and CW all bands (possibly on WARC bands as well). QSL via I4LCK.

JW, SVALBARD. Ray, OZ8RO, will once again reactivate JW5HE from March 24-31th. He likes working the WARC bands. QSL via OZ8RO and 1 green stamp is enough for return postage. Ray requests, "Please use international size enevelopes!!!"

JX, JAN MAYEN. Per, JX7DFA, continues to be active on the lower bands. He has been on almost every day during the last week working stateside stations during their evening hours (around 0300z). For CW, check 3512 and 1824.5 kHz and for SSB on 3599 and 1842 kHz. Meanwhile, Per has promised to come on RTTY before he leaves the island. He is currently

facing some problem with the rtty interface but hopes to solve the problem soon. QSL to his homecall LA7DFA. Do not expect QSLs before late April, after his return to Norway.

QSL INFO AND NEWS......
The 2nd District QSL regrets to inform FPDX that Gene Ege, WB2LCH, manager for many Carribean area stations and others has failed to claim the QSLs sent via the bureau for the stations he manages since January, 1995. After many notices, unanswered letters and an attempt at a dialogue, the bureau considers his account closed and the many cards that were on-hand have been destroyed in accordance with bureau policy. All QSLs where WB2LCH is the manager must now be sent DIRECT ONLY!

F5GTW has received the last part of the logs (up to December 29th, 1996) for FT5WE. Also, he has received a lot of QSLs for FT5ZG and states HE IS NOT the manager for this station. The QSL for FT5ZG is via F5RQQ.

Rich, WA9BXB, is offering his QSL Services to DX stations. He is currently the QSL Manager for VK3MO, TI2IDX and TI4IDX. He pays for all the QSL Cards himself - all he needs is the logs to be posted to him on a monthly basis! You can reach him at (e-mail VinCop@aol.com) or CBA: Richard Breckinridge, WA9BXB, 3827 Kemman Avenue, Brookfield, Illinois 60513-1521 USA

KH6RS QSLs. Hillar, N6HR, states QSLs for the KH6RS ARRL CW Contest operation will be QSLed unsolicited 100% via bureaus. The cards are currently at the printer.

9K2RR/NLD and 9K2RR QSLs. Operator 9K2RR, Faisal, states all QSLs for 9K2RR and 9K2RR/NLD should now go to KU9C. KU9C now has the 9K2RR log books.

T33, BANABA ISLAND. Ron, ZL1AMO, hopes to go to Banaba Island in April. No other details were given.

VI3GP, SPECIAL EVENT STATION. On Sunday, March 9th, the city of Melbourne, Victoria, Australia, will for the second successive year, host the first race of the Formula 1 Grand Prix season. Most of the GP circuit, which surrounds the picturesque Albert Park Lake on the southern outskirts of the city, is a normal part of the urban network used by daily commuters, other than the Grand Prix week when it is closed to all but race traffic. In conjunction with this major event, the Eastern and Mountain District Radio Club (EMDRC Inc.) has once again been granted approval to operate an Amateur Radio Special Event Station with the call sign VI3GP (Victor India 3 Grand Prix). The station will be operational from 0000z on Thursday, 6th March to 2359z on Sunday, 9th March from Club members' homes on a roster basis. "The Special Station will NOT be on air from the race track itself." The following frequencies (+/- QRM) will be used at appropriate times:
SSB: 3620, 7050, 14180, 14250, 21180, 21250, 28480 kHz

CW: 3515, 7015, 14015, 21015, 28015 kHz.
FM: 146.550 MHz
Dave, VK3EW, one the operators, states to look for him to be active on SSB on 3799 kHz and 1840 kHz. Stations contacting VI3GP should QSL to VK3ER either via the Bureau or direct to the Callbook address (P.O. Box 87, MITCHAM, Victoria 3132). If direct, Australian stations should please enclose a self addressed stamped envelope, and Overseas stations should enclose a self addressed envelope together with sufficient IRCs or Green Stamps for return postage of a standard size QSL card. If insufficient postage is enclosed, cards will be returned via the Bureau.

XF3, COZUMEL ISLAND. Rick, NE8Z, will be here from now until March 8th, as NE8Z/XF3. Cozumel Island is IOTA NA-090. Rick states he will not be taking his own rig this time, but he plans on visiting a local friend there...if possible he will be on the IOTA frequency 14260 kHz.

ZK1, SOUTH COOK ISLAND. Willy, VE6JO, will be in Raratonga from now until March 10th. His callsign will be ZK1JOO. Details on operating were not provided.

If you will check the database, you will find that WA7WYV, Andy Griffith, is much younger than the actor. Just the same name?

Andy, W7CXA

Hello Anthony,

Forget the Mods for this radio. It is a wonderful and durable radio and works fine on two meters but has a built in design that doesn't provide the avenue for modification. Others will echo this and if you can search on the boards for prior postings they will also bear that out. The radio is built on the original Icom IC2AT plans that were sold to tandy and manufactored for them.

Sorry but No Mods and if someone says that there are watch out.

Gary

I to am interested in information from users of this radio. I got to operate one in Ham Radio Outlet's Atlanta Store and was very impressed with it's receivers performance. I was able to almost isolate a signal in the noise and eliminate the noise on SSB .. It was next to unbelievable. I got it on my list as well and I went to look for a Yaesu FT 1000MP.

Just got a ts440s and have been told the ssb audio is low. FM and AM
appear to supply sufficent drive, whils the SSB clarity sounds like an
early modle HT with the same mikes as in the FM/AM tests?
I can't seem to locate the internal ADJUStMENTS any help would be really
appreicated.

Hi Tony,
you are correct....there IS no TYPE ACCEPTANCE for amateur gear other
than Part 15 for the rcvrs....IF MR Gasta could read along, I point him
and others (Phil, YOU need to read this also) to Page 12-6 of the ARRL
"FCC RULE BOOK" 10th edition 1st printing (copyrighted ARRL 1995)...
And I QUOTE:

"Like other radio services, amateur equipment must meet certain
standards.
Unlike other services, however, most amateur equipment does not have to
be TYPE ACCEPTED. Type acceptance is an equipment authorization granted
by the FCC, based on equipment-measurement data submitted by the
applicant...."

and on pages 12-7 & 8:

"There is one type of amateur equipment that does require type
acceptance. In 1978, the FCC banned the manufacture and marketing of any
external radio-frequency power amplifier or amplifier kit that is capable
of operating on any frequency below 144 Mhz UNLESS the FCC has issed a
grant of type acceptance for that model amplifier."

> broadcasting service, and AM is dying a lingering death. Since AM and FM
> don't share common spectrum, it wasn't necessary, as it was with spark,
> for the authorities to drive a stake through its heart. The marketplace
> was sufficient.

HUH??? Am dying a lingering death?? Check the figures. The top ten
radio stations in the US in terms of billing are AM. The top station
WFAN (660) billed over 60 million last year..43 of it for the morning
drive (Imus in the morning). Howard Stern was 6th nationwide. The
largest FM station billed 10 million in 1996.

AM stations are being bought by an almost 2 to 1 ratio over FM and are
commanding nearly 2 1/2 times the price of a competing FM station in the
same market.

The main difference is the the FM stations are killing each other with
limited formats while AM is more talk radio, more news, etc.

AM is far from dead, just as CW is far from dead (despite what some wish.

Just setting the record or CD sstraight

Hams define a lack of self confidence.
Everything you say above is what most people of character strive for and precisely the opposite of what hams DO.

Many SYSOPs are little men trying to be something.

Dont know about the detection, some of these have a lens diameter of about 2.5mm

However, the best stuff to jam them is a blob of shaving foam over then lens.
You might have to use some ingenuity to get the spray can up high, if the
camera is mounted near the roof (Most are) However, a shaving foam can on a
stick might make people look at you. What exactly do you have in mind with
this little project?

While chatting on VE3MPC Steve, VE3RUU told me that both Prince Charles and Princess Diana are radio amateurs. If this is true it would open up an interesting possibility. Should one or the other visit Canada it would be a simple matter to loan them a transceiver and obtain permission to operate in Canada. This would certainly make for some interesting QSOs. How about a Royal QSL on the wall of your shack?
I suggest that if anyone is interested in pursuing this possibility that he or she contact the Governor-General's residence at 993-8200 during normal business hours. Any takers?

Jeff,

My statements were that modifying amateur radio equipment was and is poor engineering practice. That means that I am against it. The legal issue is not withstanding. If experimentation is the reason; then it is a good way to learn. BUT IT DOES NOT MEAN IT IS ACCEPTABLE FOR THAT SERVICE!

As a "radio tweaker", which Dana has called me... I know better to take a ham rig and substitute it for PROPER EQUIPMENT.

I'm talking about the ones who are really learning what's going
on ... not the dolts ...

> You're giving today's kids too much credit - our colleges have to teach
> them subjects at a remedial-level before we can begin their real college
> education. And now there is a drive at many universities to weaken the
> traditional curriculum even more due to students' inability to master
> the material at a level that once was easily met with a fair amount of
> work.

Oh, I didn't mean to imply that all kids today are Einsteins ... or
that the schools were doing a good job ... I believe I've mentioned
before that my ex-wife had a son who was about to graduate from
Carl Poly as an EE ... he's a very nice kid, but he doesn't know
shit ... and he's about to get an EE ... I was AMAZED at how
little he knew for a 4th year EE student ...

> Glass houses and rocks again. What equipment do you operate
> on the air that you've built yourself, Carl? (That must be the
> tenth time I've asked you that question.)

At the moment, none ... but I've not even bothered to
establish a fixed station since I moved ... I'm living in a small
appartment and I've been too busy at work, had health problems,
etc. ... I am planning to move to more practical (workspace and
antenna-wise) quarters by fall ...

However, I don't think that anyone could fairly characterize me
as an "appliance operator," though ... over the years I've build
far more equipment than I've bought ... including quite a few
repeater systems and other things that are still in service in

locations that I've long-since departed ... I've probably build more stuff over the last 20 years than 90+% of hams ...

For the moment, my building needs are, due to practical considerations, being satisfied by my work ...

Source record: 203234

>>You could buy many of them, and sell them easily for $20 each
>>or more at Hamfests...

Not when we already have Walnut Creek's QRZ! CD-ROM - a proven,
excellent CD-ROM with thousands of Amateur Radio-related texts/programs
available at Swaps for $12.00, Jonathan.

Oh - and it has an excellent callsign database system, too.

Just letting you know what the "competition" is. If we are to make it
competitive, we'd need to sell it for about $10.-$12./each.

>not withstanding. If experimentation is the reason; then it is a good way
>to learn. BUT IT DOES NOT MEAN IT IS ACCEPTABLE FOR THAT SERVICE!

You're just soooo stubborn, William. You're saying it is *always*
poor technical practice to use a modified amateur radio in non-amateur
service. You're just incapable of accepting evidence to the contrary,
instead launching into personal attacks. There are numerous examples
of commercial gear made by Japanese manufacturers that share RF decks
with amateur radios. The *same* RF deck. Technically, then, your
argument has a hole in it.

Legally, a non-type accepted radio may not be used in a service
requiring type acceptance. Period.

None of your insults and patronizing explanations of RF filters
will change the truth.

>As a "radio tweaker", which Dana has called me... I know better to take a
>ham rig and substitute it for PROPER EQUIPMENT.

Well, that's just funny. As an "incompetent engineer", as Wetzel has
called me, I know that commercial gear is often superior to
amateur gear - which is why I've been using Motorolas and GEs in
amateur service for a number of years.

Based on the private email I've received, I believe I can safely ignore
your personal attacks. I've been assured that your attacks have hurt
your credibility rather than mine.

I believe that shortwave broadcasting is allowed up to 26.100 on the 12
meter band. That could be where the interference came from.

>I'm interested in some AEA products like the PK96 or the dsp232
>modems..... But here in the Netherlands I've heardthat there is
>something going on at the AEA firm...
>I haven't got detailed answers but I'm afraid that it is possible that
>within a short period AEA products wouldn't be sold anymore...
>A modem like the pk96 isn't availible at this moment.....
>Can someone inform me what's going on with the AEA products..

The company has been sold and the products should still be available for
sale.

The following is late news about Amateur Radio for Radio Amateurs as prepared from NEWSLINE RADIO scripts by the staff of the AMATEUR RADIO NEWSLINE, INC., formerly the WESTLINK RADIO NETWORK. Amateur Radio Newsline is a audio news service distributed via telephone.

This hardcopy version is produced by Dale Cary - WD0AKO from scripts provided to him weekly by Newsline. It is then distributed to on-line services, bbs networks and internet user jointly by Dale Cary and Steve Coletti.

Editorial comments, news item and all other business should be directed to:

Bill Pasternak, WA6ITF
Newsline Producer & Editor

Internet E-mail: Billwa6itf@aol.com
newsline@ix.netcom.com
Phone: (805) 296-7180
Fax: (805) 296-7180
(Fax senders wait for voice prompt.)

Hardcopy comments or complements can be directed to:

Dale Cary, WD0AKO
Hardcopy Distribution for Newsline

Internet E-mail: wd0ako@rrnet.com
Phone: (218) 236-6324

The following is a QST

The FCC tells the public that multiple coordinators are wanted for Private Land Mobile Radio. Can this decision impact on Amateur Radio? Find out on Newsline report number 1020 coming your way right now!

(*****

PLMRS FREQUENCY COORDINATION BECOMES COMPETITIVE

The FCC says that it wants frequency coordination in the private sector to become a competitive business. This decision could also impact on Amateur Radio if the agency decides that this kind of financial rivalry provides the best service to the general public, including the ham radio public.

On Thursday, February 20th, the FCC adopted rules that set forth a consolidation plan for the Private Land Mobile Radio Services below 800 MHZ. The plan also addresses other issues raised in conjunction with consolidation including a discussion of who will provide for frequency coordination of the various services.

Here, it is the Commissions contention that adding the element of competition will eventually provide the best coordination services at the lowest possible cost to the spectrums end users. In fact, throughout this proceeding, the Commission says that it has held a broad objective of promoting a more efficient use of the existing Private Land Mobile Radio spectrum allocation to satisfy future communications requirements.

From an operational standpoint, what the FCC wants to eventually see several organizations providing coordination of the same pool of frequencies in the same geographic areas to the same potential user base. Previously, frequency coordinators had sole control over the frequencies within their pool.

In addition to consolidating the Private Land Mobile Radio services, the Commission has also established a method for the users of this service to implement highly efficient trunked systems in the bands below 800 MHZ. It also adopts a plan for disposing of the low power "offset" channels in the 450-470 MHZ band.

No mention is made of coordination in the Amateur Radio Service as it would be beyond the scope of the rule making. But this FCC move to commercialize the coordination process comes at a time when hams have been trying to get recognition for a single point of contact on repeater coordination issues.

And it is interesting to note that the proposal to commercialize the coordination process in Private Land Mobile Radio now, is not unlike a ham radio related decision issued by former FCC Special Services Branch Chief Raymond A. Kowalski over a decade ago. It too indirectly stated that competitive coordinators could exist and that they could coordinate the same spectrum in the same geographic area. That regulatory interpretation has been the main reason that ham radio coordinators have banded together to ask for a single point of contact to the FCC. The question now becomes one of will the FCC buy the concept of a single point of contact for ham radio frequency coordination at the same time that they are telling Private Land Mobile Radio service users that many points are defiantly OK.

Titled a Report and Order on FCC Docket 97-61, the full text is available for viewing in the February 20th Daily Releases on the FCC's world wide web site. Go to:

http://www.fcc.gov

and use the provided search engine to find document nrwl117014.txt.

HAARP TO AIR TEST TRANSMISSIONS

Hams are being asked to take part in a test of the High Frequency Active Auroral Research Program, or HAARP radio transmitting installation located near Gakona, Alaska. On March 8th, that facility will transmit a test signal and will be seeking reports from hams and SWL's in Alaska and in the "Lower 48 states." This, to determine how well the HAARP transmissions can be heard to the south.

During this test, the HAARP facility will transmit on or near the frequencies 3.4 MHZ and 6.99 MHZ . This will give listeners the opportunity to listen for the HAARP signal and to claim a QSL card.

The test will be conducted beginning at 04:30 UTC on March 8. That's 23:30 Eastern Time on March the 7th.

(*****

GPS STUDY

Hams involved with APRS and GPS are being asked to contribute to a federal study into the benefits of establishing a national differential global positioning system radio beacon service. The U.S. Coast Guard and the U.S. Army Corps of Engineers are setting up to provide DGPS signals in coastal areas and along navigable waterways. Terrestrial DGPS signals in the 285 to 325 kHz spectrum complement satellite GPS data by increasing their accuracy.

Ted Pugh is with P B Farradyne Inc. That's the story studying the benefits and feasibility of setting up an inland DGPS system. Pugh says he wants to hear from the amateur community about its use of GPS and APRS in public safety applications, and how DGPS might help. Comments may be sent to him at:

pugh@farradyne.com

HAM ROUND THE WORLD BALLOON FLIGHT

A ham radio operator plans to fly a high altitude balloon around the world. Bob Martin is KC5LHL and later this year he and two companion balloon pilots will climb into a sealed aluminum capsule and ascend to the edge of space under a four hundred and fifty foot free flying balloon named the Dymocks Flyer. There, he hopes that the earths winds will carry him around the globe and back to his Australia launch site.

Martin will be carrying an airborne ham radio station and is expected to be available for QSO's during the flight. To find out more about this exciting high altitude ham radio adventure we suggest you visit Bob's home page on the world wide web. The address is simple. Its:

http://www.dymocksflyer.com

You can also reach it on a link from our Newsline home page on the world wide web.

CW AND WRC '99

Last week we quoted sections of an ARRL Board of Directors report on the future of the Morse Code in the Amateur Radio Service world wide. The portion we refereed to dealt with the possible point of view of developed nation regarding their position at WRC-99.

Also noted in the report is the likely position of emerging third world nations. According to the report the belief here is that smaller countries feel that staffing and operations in support of retaining the Morse requirement is a poor use of their scarce resources. As a result, it is expected that many of these emerging nations will favor deleting the mandatory Morse testing provision.

ITU Article S 25.5 is the rule that forces all nations to test candidates for ham licenses in Morse code skill. If it is deleted, then the only option ham radio will have to retain Morse testing will be to lobby to try to get a rider added to Article S 25.6. This would be a simple statement that would permit licensing requirements with respect to sending and receiving Morse code to be left to the discretion of each administration. Such a phrase might signal the desirability of keeping CW as a desirable skill for Amateur Radio operators.

Even if such an amendment is put in place another question immediately arises. How may nations, under intense pressure from industry lobbyists that want to sell radio gear will quickly knuckle under and make the Morse code in their nations go away? We will have a part of the answer in late 1999.

DOCTOR HELPS CHILD VIA HAM RADIO

Ham radio has assisted in treating a sick child in Brazil. Dr. Jeff Zlotnick, KB2EVB, of Easton, Pennsylvania, was able to provide some over the air aid via phone patch when the call went out from PP8ZBL on the Maritime Net on February the 1st.

According to Clarence Snyder, W3PYF, Dr. Zlotnick asked for information on the child's condition, and made some recommendations for assistance, which PP8ZBL said they would follow.

Bob Puharic, WF3H, of Whitehall, Pennsylvania, monitored the call and made the patch to KB2EVB. Both are members of the Delaware - Lehigh Valley Amateur Radio Club.

FIRE HELP

Monroe County, Michigan, ARES turned out on February 7th to support the local Red Cross chapter in the wake of a major fire in an apartment building that displaced forty nine families.

According to Dale Williams, WA8EFK, hams provided communication to support mass care efforts, including feeding the scores of firefighters. They also helped in providing food, temporary shelter, and basic needs to fire victims. Eight hams pitched in during the day-long operation.

Ironically, this same group turned out about eighteen months ago to help the Red Cross following a major fire in the same building. This time, the structure was totally destroyed.

T HUNT BATTLE

A battle is shaping up in Albuquerque, New Mexico between the "T Hunters" and some locals hams operating on 146.580 MHZ. According to postings on the VHF Reflector, at least fifteen area hams are on 146.580 all the time.

Nothing wrong with that except the that the National T Hunt frequency is 146.565 and whenever a T HUNT is on, their frequency is covered up by the folks on .580.

And here is where it all has gotten gnatty. During a recent hunt someone comes up and tell the operators on .58 that they will have to stop chatting until the hunt is over. Well you know how that sits with a few people. While some move off, others stand their ground and say no. That they are not going to move and the hunters will have to find another frequency.

According to several reflector postings, 146.565 is a national frequency reserved for hidden transmitter hunting, but strictly as a gentlemens agreement. As the local Duke City rag chewers say, they were never asked if they wanted in on this agreement, and they have no intention on going away. So stay tuned. Who knows where this will end.

NOVEMBER FUND REPORT

His job has kept him on the road and in the air, but he is back in town for a few weeks. So while we have him, here is our fund administrators report for November 1996:

We begin this month's report with a thank you to the soldiers and civilians of the Radio Society of Okinowa, JR6YQF. From this reporter's home turf, we heard from the Cuyahoga Falls, Ohio Amateur Radio Club. and the Thomson Amateur Radio Club, W9RCA of Indianapolis. We heard from the Illinois Valley Amateur Radio Club, and the Argonne Labs Radio Network, who, as a U.S. government contractor, cannot make direct contributions, but as a group of individuals, wrote us a check. Yours truly has popped up on their net in the past.

We heard from Michael Schroeder, N0ALT from Rogers, Arkansas, and JB Guillaume, N5CPE of Rougon, Louisiana, the Clearlake Amateur Radio Club of Houston, and the Brazos Valley ARC of Missouri City, Texas.

Moving west, we heard from the Pikes Peak Radio Amateur Association of Colorado Springs, the Wide Area Data Group of Sparks, Nevada, and H.T. Heydenfeldt and the Loma Linda University ARC, W6FZV, of Loma Linda, California.

Remember that clubs that support us with the club name, repeater call, and service area, get a mention during the newscast ID break.

AOL HACKER CONVICTED

America Online is applauding the conviction of Nicholas Ryan. Ryan, a computer hacker known as Happy Hardcore, recently pleaded guilty in federal district court in Alexandria, Va., to a felony offense under the Computer Fraud and Abuse Act.

According to a press release, Ryan illegally accessed America Online and engaged in fraudulent activities that violated the services terms of service. After detecting the illegal activity and assembling evidence against him, America Online notified the Secret Service. They began their own investigation culminating in Ryans' guilty plea.

This case is considered to be a legal milestone because it represents the first successful computer fraud prosecution involving an Internet online network.

(Via AoL Press Release)

(*****

NO MORE DATE OF BIRTH

Want to find out how old a ham is? Well, the FCC has now made it a little bit harder. Effective February 21 the FCC no longer will distribute date of birth information as part of its Amateur Radio license data.

No reason has been given for the change, but the field has been physically removed from the data stream. At least some call Several call sign look up systems could be affected by this change.

(Via FCC Press Release)

(*****

SPORTS MINDED HAMS

From the Newsline sports page, word that the Ak-Sar-Ben Amateur Radio Club of Omaha, Nebraska provided communications to the 2nd Annual Cornhusker State Winter Games the weekend of February 7, 8, 9th.

The Cornhusker State Winter Games attracts amateur athletes from across the state into Omaha for a weekend of competition in 20 different sports. In 1997 version of the Winter Games grew over 40 percent and was spread across the Omaha Metropolitan area community centers and schools, to ski areas located 50 miles apart.

Modes used included FM voice and fast scan amateur television. About 50 area hams, provided over 350 hours of communications. While many site directors were provided with cellular phones, they quickly realized that amateur radio was more reliable. With numerous site directors trying to make phone calls to the same game headquarters, ham relayed questions we answered far more quickly.

By the way? Wonder what the name Ak-Sar-Ben means? Try spelling it backward.

(Via Ak-Sar-Ben ARC)

YOUNG HAM OF THE YEAR '97

The nominating period is now open for the 1997 Young Ham of the Year Award. In cooperation with Yaesu U.S.A. Corporation and CQ Magazine, we at Newsline present this award annually to a young ham who has contributed to his community or the nation using ham radio.

To qualify, a nominee must be 18 years of age or younger, be an FCC licensed radio amateur and reside in the continental United States. More information on the award and an official nominating form can be found on our web page at

http://rrnet.com/rrra/newsline

Then scroll down to Young Ham of the Year Award 97 and click on it with your mouse.

You can also get this information by mail by sending a self addressed
stamped envelope to the:

1997 Young Ham of the Year Award

```
Archive-name: linux/howto/AX25-HOWTO/part1
Last-modified: 2 Jan 97

-----BEGIN PGP SIGNED MESSAGE-----

*** The `Linux AX25 HOWTO' is posted automatically by the
*** Linux HOWTO coordinator, Greg Hankins <gregh@sunsite.unc.edu>. Please
*** direct any comments or questions about this HOWTO to the author,
*** Terry Dawson <terry@perf.no.itg.telecom.com.au>.

- --- BEGIN Linux AX25 HOWTO part 1/2 ---

Linux AX25-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telecom.com.au
v1.3, 28 December 1996

The Linux Operating System is perhaps the only operating system in the
world that can boast native and standard support for the AX.25 packet
radio protocol utilised by Amateur Radio Operators worldwide. This
document aims to describe how to install and configure this support.

1. Introduction.

This document was originally an appendix to the HAM-HOWTO, but grew
too large to be reasonably managed in that fashion. This document
describes how to install and configure the native AX.25 and NetRom
support for Linux. A few typical configurations are described that
could be used as models to work from.

1.1. Changes from the previous version

Additions:
Thomas's SoundModem driver.
Jonathons user_call programs.
Added some ax25d configurations hints - Tomi's suggestion.
Corrections/Updates:
fixed axparms command to reflect current version.
fixed some old file definitions that I'd missed.
updated net-tools location
Updated 2.1.* section.
Made the call program more obvious.

1.2. Other related documentation.

There is a lot of related documentation. There are many documents that
relate to Linux networking in more general ways and I strongly
recommend you also read these as they will assist you in your efforts
```

and provide you with stronger insight into other possible configurations.

They are:

The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>,

the Net-2-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/NET-2-HOWTO.html>,

the Ethernet-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/Ethernet-HOWTO.html>,

and

the Firewall-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/Firewall-HOWTO.html>

2. Where to obtain new versions of this document.

The best place to obtain the latest version of this document is from a Linux Documentation Project archive. The Linux Documentation Project runs a Web Server and this document appears there as The AX25-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/AX25-HOWTO.html>. You can always contact me, but I pass new versions of the document directly to the LDP HOWTO coordinator, so if it isn't there then chances are I haven't finished it.

3. Linux and the AX.25 and NetRom Packet Radio Protocols.

The AX.25 protocol offers both connected and connectionless modes of operation, and is used either by itself for point-point links, or to carry other protocols such as TCP/IP and NetRom.

It is similar to X.25 level 2 in structure, with some extensions to make it more useful in the amateur radio environment.

The NetRom protocol is an attempt at a full network protocol and uses AX.25 at its lowest layer as a datalink protocol. It provides a network layer that is an adapted form of AX.25.

Alan Cox developed some early kernel based AX.25 software support for Linux. Jonathon Naylor <g4klx@g4klx.demon.co.uk> has taken up ongoing development of the code, has added NetRom support and is now the developer of the AX.25 related kernel code. DAMA support was developed by Joerg, DL1BKE, jreuter@lykos.tng.oche.de. Baycom support was added by Thomas Sailer, <sailer@ife.ee.ethz.ch>. The AX.25 utility software is now supported by me.

The Linux code supports KISS based TNC's (Terminal Node Controllers), the Ottawa PI card, the Gracilis PacketTwin card and other Z8530 SCC based cards with the generic SCC driver and both the Parallel and Serial port Baycom modems.

The User programs contain a simple PMS (Personal Message System), a beacon facility, a line mode connect program, `listen' an example of

how to capture all AX.25 frames at raw interface level and programs to configure the NetRom protocol. Included also are an AX.25 server style program to handle and despatch incoming AX.25 connections and a NetRom daemon which does most of the hard work for NetRom support.

4. The AX.25/NetRom software components.

The AX.25 software is comprised of three components, the kernel source, the network configuration tools and the utility programs.

The version 2.0.xx Linux kernels include the AX.25, NetRom, Z8530 SCC, PI card and PacketTwin drivers by default. I recommend you obtain and use the version 2.0.xx kernel source.

4.1. Finding the kernel, tools and utility packages.

4.1.1. The kernel source:

The kernel source can be found in its usual place at:

ftp.funet.fi

/pub/Linux/PEOPLE/Linus/v2.0/

It is stronly recommended that you upgrade to the most recent 2.0 kernel. Jonathon specifically recommends not using a kernel less than 2.0.12 for AX.25 purposes as some minor bugs were fixed in that and later versions.

4.1.2. The network tools:

The latest alpha release of the standard Linux network tools support AX.25 and NetRom and can be found at:

ftp.inka.de

/pub/comp/Linux/networking/net-tools/net-tools-1.32-alpha.tar.gz

or:

ftp.linux.org.uk

/pub/linux/Networking/PROGRAMS/base/net-tools-1.32-alpha.tar.gz

The latest ipfwadm package can be found at:

ftp.xos.nl

/pub/linux/ipfwadm/

4.1.3. The AX25 utilities:

There are two different strains of AX25-utilities. One is or the 2.0.* kernels and the other is for the 2.1.* kernels. The ax25-utils version number indicate the oldest version of kernel that they will work with. Please choose a version of the ax25-utils appropriate to your kernel.

The AX.25 utility programs can be found at Jonathon Naylors home site:

www.cs.nott.ac.uk <http://www.cs.nott.ac.uk/~jsn/>

or by ftp from:

ftp.cs.nott.ac.uk

/jsn/ax25-utils-2.0.12c.tar.gz

or:

sunsite.unc.edu

/pub/Linux/apps/ham/ax25-utils-2.0.12c.tar.gz

5. Installing the AX.25/NetRom software.

To successfully install AX.25 support on your linux system you must configure and install an appropriate kernel and then install the AX.25 utilities.

5.1. Compiling the kernel.

If you are already familiar with the process of compiling the Linux Kernel then you can skip this section, just be sure to select the appropriate options when compiling the kernel. If you are not, then read on.

The normal place for the kernel source to be unpacked to is the /usr/src directory into a subdirectory called linux. To do this you should be logged in as root and execute a series of commands similar to the following:

```
# mv linux linux.old
# cd /usr/src
# tar xvfz linux-2.0.27.tar.gz
# cd linux
```

After you have unpacked the kernel source into place you need to run the configuration script and choose the options that suit your hardware configuration and the options that you wish built into your kernel. You do this by using the command:

```
# make config
```

You might also try:

```
# make menuconfig
```

if you prefer a full screen menu based method. I'm going to describe the original method, but you use whichever you are most comfortable with.

In either case you will be offered a range of options at which you must answer `Y' or `N'. (Note you may also answer `M' if you are using modules. For the sake of simplicity I will assume you are not, please

make appropriate modifications if you are).

The options most relevant to an AX.25 configuration are:

```
Prompt for development and/or incomplete code/drivers [Y/n] Y
Networking support (CONFIG_NET) [Y/n/?] Y
Loopback device support (CONFIG_BLK_DEV_LOOP) [N/y/m/?] Y
Network firewalls (CONFIG_FIREWALL) [N/y/?]
TCP/IP networking (CONFIG_INET) [Y/n/?] Y
IP: forwarding/gatewaying (CONFIG_IP_FORWARD) [N/y/?]
IP: firewalling (CONFIG_IP_FIREWALL) [N/y/?] (NEW)
IP: tunneling (CONFIG_NET_IPIP) [N/y/m/?] (NEW)
Amateur Radio AX.25 Level 2 (CONFIG_AX25) [N/y/?] Y
AX.25 over Ethernet (CONFIG_BPQETHER) [N/y/?] (NEW)
Amateur Radio NET/ROM (CONFIG_NETROM) [N/y/?] (NEW)
Kernel/User network link driver(ALPHA) (CONFIG_NETLINK) [N/y/?]
Network device support (CONFIG_NETDEVICES) [Y/n/?] Y
SLIP (serial line) support (CONFIG_SLIP) [N/y/m/?] Y
Radio network interfaces (CONFIG_NET_RADIO) [N/y/?]
BAYCOM ser12 and par96 kiss emulation driver for AX.25 (CONFIG_BAYCOM) [N/y/m/?]
Z8530 SCC kiss emulation driver for AX.25 (CONFIG_SCC) [N/y/m/?]
Other ISA cards (CONFIG_NET_ISA) [N/y/?]
Ottawa PI and PI/2 support (CONFIG_PI) [N/y/?] (NEW)
Gracilis PackeTwin support (CONFIG_PT) [N/y/?] (NEW)
Standard/generic serial support (CONFIG_SERIAL) [Y/n/?]
```

The options I have flagged with a `Y' are those that you must must answer `Y' to. The rest are dependent on what hardware you have and what options you want to include. Some of these options are described in more detail later on, so if you don't know what you want yet, then read ahead and come back to this step later.

After you have completed the kernel configuration you should be able to cleanly compile your new kernel:

```
# make dep
# make clean
# make zImage
```

Make sure you move your arch/i386/boot/zImage file wherever you want it and then run lilo to ensure that you actually boot from it.

5.2. The network configuration tools.

Now that you have compiled the kernel you should compile the new network configuration tools. These tools allow you to modify the configuration of network devices and to add routes to the routing table.

The new alpha release of the standard net-tools package includes support for AX.25 and NetRom support. I've tested this and it seems to work well for me.

5.2.1. Building the standard net-tools release.

Don't forget to read the Release file and follow any instructions
there. The steps I used to compile the tools were:

```
# cd /usr/src
# tar xvfz net-tools-1.32-alpha.tar.gz
# cd net-tools-1.32-alpha
# make config
```

At this stage you will be presented with a series of configuration
questions, similar to the kernel configuration questions. Be sure to
include support for all of the protocols and network devices types
that you intend to use. If you do not know how to answer a particular
question then answer `Y'.

The tools should compile cleanly against the kernel source without
error.

When the compilation is complete, you should need only use the:

```
# make install
```

command to install the programs in their proper place.

If you wish to use the IP firewall facilities then you will need the
latest firewall administration tool ipfwadm. This tool replaces the
older ipfw tool which will not work with new kernels.

I compiled the ipfwadm utility with the following commands:

```
# cd /usr/src
# tar xvfz ipfwadm-2.0beta2.tar.gz
# cd ipfwadm-2.0beta2
# make install
# cp ipfwadm.8 /usr/man/man8
# cp ipfw.4 /usr/man/man4
```

5.3. The AX.25 user programs.

After you have successfully compiled and booted your new kernel, you
need to compile the user programs. To compile and install the user
programs you should use a series of commands similar to the following:

```
# cd /usr/src
# tax xvfz ax25-utils-2.0.12c.tar.gz
# cd ax25-utils-2.0.12c
# make config
# make
# make install
```

The files will be installed under the /usr directory by default in
subdirectories: bin, sbin, etc and man.

If you get messages something like:

```
gcc -Wall -Wstrict-prototypes -O2 -I../lib -c call.c
call.c: In function `statline':
call.c:268: warning: implicit declaration of function `attron'
call.c:268: `A_REVERSE' undeclared (first use this function)
call.c:268: (Each undeclared identifier is reported only once
call.c:268: for each function it appears in.)
```

then you should double check that you have the ncurses package properly installed on your system. The configuration script attempts to locate your ncurses packages in the common locations, but some installations have ncurses badly installed and it is unable to locate them.

6. Configuring a RAW AX.25 connected mode interface.

The first stage to configuration of an AX.25 interface is to configure it to work as a `vanilla' AX.25 interface with no TCP/IP. The following configuration will get you to the point of being able to make AX.25 calls from your Linux machine to other AX.25 nodes.

The AX.25 software has been designed to work with a TNC in kiss mode or with other cards such as the Ottawa PI2 card, PacketTwin and other SCC cards via special drivers that emulate a kiss tnc.

For real KISS TNC's there are two steps to complete in order to create an AX.25 port ready to use to make outgoing calls. For other types of hardware you need only complete the first step.

Note: all AX.25 ports must have unique callsigns. This is currently a non-negotiable design constraint.

6.1. Creating the /etc/ax25/axports file.

The AX.25 ports have a configuration file that is read by many programs that want to find information about an AX.25 port. This file is called the:

/etc/ax25/axports

file. The format of the file is as follows:

portname callsign baudrate paclen window description

where:

portname
is a text name that you will refer to the port by.

callsign
is the AX.25 callsign you want to assign to the port.

baudrate
is the speed at which you wish the port to communicate with your TNC.

paclen
is the maximum packet length you want to configure the port to
use for AX.25 connected mode connections.

window
is the AX.25 window (K) parameter. This is the same as the
MAXFRAME setting of many tnc's.

description
is a textual description of the port.

In my case, mine looks like:

radio VK2KTJ-0 4800 256 2 144.800 MHz

6.2. Creating the AX.25 device

If you are using an SCC card like the PI2 or PacketTwin then you do
not need to create the network device, as the kernel driver will
automatically do this for you. If you are using a KISS TNC then you
will need to create the AX.25 interface as it will not already exist.
Creating an AX.25 port is very similar to creating a slip device.

You will need to have the TNC preconfigured and connected to your
serial port. You can use a communications program like minicom or
seyon to configure the TNC into kiss mode if you wish.

In it simplest form you can use the axattach program as follows:

/usr/sbin/axattach /dev/ttyS0 radio

would configure your /dev/ttyS0 serial device to be a kiss interface
configured as per the details for the line beginning with the portname
"radio" in the /etc/ax25/axports file.

All this step has done is to actually activate the device in the
kernel, you need to run other programs before you an actually make use
of the port.

6.2.1. Setting the callsign for 8530 SCC cards.

If you are using a PI or PacketTwin card then you should use the
axparms -setcall command to change the callsign of the appropriate
port to that which you intend to use. Refer to the PI/PacketTwin
section for the names of the network devices to use.

6.3. Configuring for Dual Port TNC's

The mkiss utility included in the ax25-utils distribution allows you
to make use of both modems on a dual port TNC. Configuration is fairly
simple. It works by taking a single serial device connected to a
single multiport TNC look like a number of devices each connected to a
single port TNC. You do this before you do any of the AX.25
configuration. The devies that you then do the AX.25 configuration on
are pseudo-TTY interfaces, (/dev/ttyp*), and not the actual serial
device.

Example: if you have a dual port tnc and it is connected to your /dev/ttyS0 serial device at 9600 bps, the command:

```
# /usr/sbin/mkiss -s 9600 /dev/ttyS0 /dev/ptyp0 /dev/ptyp1
# /usr/sbin/axattach /dev/ttyp0 port1
# /usr/sbin/axattach /dev/ttyp1 port2
```

would create two tty devices: /dev/ttyp0 and /dev/ttyp0 that each look like a normal single port TNC. You would then treat /dev/ttyp0 and /dev/ttyp1 just as you would a conventional serial device with TNC connected. This means you'd then use the axattach command as described above, on each of those, in the example for AX.25 ports called port1 and port2. You shouldn't use axattach on the actual serial device as the mkiss program uses it.

The mkiss command has a number of optional arguments that you may wish to use. They are summarised as follows:

-c enables the addition of a one byte checksum to each KISS frame. This is not supported by most KISS implementation, it is supported by the G8BPG KISS rom.

-s <speed>
sets the speed of the serial port.

-h enables hardware handshaking on the serial port, it is off by default. Most KISS implementation do not support this, but some do.

-l enables logging of information to the syslog logfile.

6.4. Testing the AX.25 interface.

You now should be able to make outgoing AX.25 connections. To test AX.25 connected mode you could use the call program as demonstrated:

```
/usr/bin/call radio VK2DAY via VK2SUT
```

Note: you must tell call which AX.25 port you wish to make the call on, as the same AX.25 node might be reachable on any of the ports you have configured.
The call program is a linemode terminal program for making AX.25 calls. It recognises lines that start with `~' as command lines. The `~.' command will close the connection.

Please refer to the man page in /usr/man for more information.

7. Configuring an AX.25 interface for tcp/ip.

It is very simple to configure an AX.25 port to carry tcp/ip. Jonathon has modified the axattach command so that you can include the IP address that you want the interface to be configured with on the command line. For example, to modify the example presented earlier, I could use the command:

```
# /usr/sbin/axattach -i 44.136.8.5 -m 512 /dev/ttyS0 radio
# /sbin/route add -net 44.136.8.0 netmask 255.255.255.0 sl0
# /sbin/route add default sl0
```

to create the AX.25 interface with an IP address of 44.136.8.5 and an MTU of 512 bytes. You should still use the ifconfig to configure the other parameters if necessary.

You do not need to do it this way, you can of course just use the ifconfig program to configure the ip address and netmask details for the port and add a route via the port, just as you would for any other tcp/ip interface.

```
# /sbin/ifconfig sl0 44.136.8.5
# /sbin/ifconfig sl0 netmask 255.255.255.0
# /sbin/ifconfig sl0 broadcast 44.136.8.255
# /sbin/ifconfig sl0 arp mtu 256 up
# /sbin/route add -net 44.136.8.0 netmask 255.255.255.0 sl0
# /sbin/route add default sl0
```

The commands listed above are typical of the sort of configuration many of you would be familiar with if you have used NOS or any of its derivatives or any other tcp/ip software. Note that the default route might not be required in your configuration if you have some other network device configured.

To test it out, try a ping or a telnet to a local host.

```
# ping -i 5 44.136.8.58
```

Note the use of the `-i 5' arguments to ping to tell it to send pings every 5 seconds instead of its default of 1 second.

8. Configuring an AX.25 interface for NetRom.

To configure NetRom on an AX.25 interface you must configure two files.

8.1. Configuring /etc/ax25/nrports

The first is the /etc/ax25/nrports file. This file describes the NetRom port in much the same way as the /etc/ax25/axports file describes the AX.25 ports.

This file is formatted as follows:

```
name callsign alias paclen description
```

Where:

name
is the text name that you wish to refer to the port by.

callsign
is the callsign that the NetRom traffic from this port will use.

alias
is the NetRom alias this port will have assigned to it.

paclen
is the maximum size of NetRom frames transmitted by this port.

description
is a free text description of the port.

An example would look something like the following:

netrom VK2KTJ-9 LINUX 235 Linux Switch Port

Note that the ports are referred to by name by programs such as call.

8.2. Configuring /etc/ax25/nrbroadcast

The second file is the /etc/ax25/nrbroadcast file.

This file is formatted as follows:

axport min_obs def_qual worst_qual verbose

Where:

axport
is the port name obtained from the /etc/ax25/axports file. If
you do not have an entry in /etc/ax25/nrbroadcasts for a port
then this means that no NetRom routing will occur and any
received NetRom broadcasts will be ignored for that port.

min_obs
is the minimum obselesence value for the port.

def_qual
is the default quality for the port.

worst_qual
is the worst quality value for the port, any routes under this
quality will be ignored.

verbose
is a flag determining whether full NetRom routing broadcasts
will occur from this port or only a routing broadcast
advertising the node itself.

An example would look something like the following:

radio 1 200 10 1

8.3. Creating the NetRom device

When you have the two configuration files completed you must create
the NetRom device in much the same way as you did for the AX.25
devices. This time you use the nrattach command:

nrattach netrom

This command would start the NetRom device (nr0) named netrom
configured with the details specified in the /etc/ax25/nrports file.

8.4. Starting the NetRom daemon

The NetRom daemon manages the NetRom routing tables and generates the
NetRom routing broadcasts. You start NetRom with the command:

/usr/sbin/netromd

You should soon see the /proc/net/nr_neigh file filling up with
information about your NetRom neighbours.

Remember to put the /usr/sbin/netromd command in your rc files so that
it is started automatically each time you reboot.

8.5. Testing the NetRom interface.

You now should be able to make outgoing NetROM connections. To test
NetRom connections you can use the call program as demonstrated:

/usr/bin/call netrom VK2DAY

Note: you must tell call which NetRom port you wish to make the call
on. You might have to wait until your NetRom routing tables fill with
routes before you can reach a remote node.

The call program is a linemode terminal program for making NetRom
calls. It recognises lines that start with `~' as command lines. The
`~.' command will close the connection.

Please refer to the man page in /usr/man for more information.

9. Configuring IP on a NetRom interface.

Configuring a NetRom interface for tcp/ip is almost identical to
configuring an AX.25 interface for tcp/ip.

Again you can either specify the ip address and mtu on the nrattach
command line, or use the ifconfig and route commands, but you need to
manually add arp entries for hosts you wish to route to because there
is no mechanism available for your machine to learn what NetRom
address it should use to reach a particular IP host.

So, to create an nr0 device with an IP address of 44.136.8.5, an mtu
of 512 and configured with the details from the /etc/ax25/nrports file
for a NetRom port named netrom you would use:

/usr/sbin/nrattach -i 44.136.8.5 -m 512 netrom
route add 44.136.8.5 nr0

or you could use something like the following commands manually:

ifconfig nr0 44.136.8.5 hw netrom VK2KTJ-9
route add 44.136.8.5 nr0

Then for each IP host you wish to reach via NetRom you need to set route and arp entries. To reach a destination host with an IP address of 44.136.80.4 at NetRom address BBS:VK3BBS via a NetRom neighbour with callsign VK2SUT-0 you would use commands as follows:

```
# route add 44.136.80.4 nr0
# arp -t netrom -s 44.136.80.4 vk2sut-0
# nrparms -nodes vk3bbs + BBS 120 6 sl0 vk2sut-0
```

The `120' and `6' arguments to the nrparms command are the NetRom quality and obsolescence count values for the route.

10. Configuring an Ethernet device for AX.25 ala BPQ

Linux support BPQ Ethernet compatibility. This enables you to run the AX.25 protocol over your Ethernet LAN and to interwork your linux machine with other BPQ machines on the LAN.

Configuration is quite straightforward. You firstly must have configured a standard Ethernet device. This means you will have compiled your kernel to support your Ethernet card, and executed configuration commands similar to the following:

```
# ifconfig eth0 44.136.8.5 netmask 255.255.255.248 up
# ifconfig eth0 broadcast 44.136.8.103
# route add -net 44.136.8.96 netmask 255.255.255.248 eth0
```

If you don't actually want to run tcp/ip on your ethernet device then all you need to do is use the:

```
# ifconfig eth0 up
```

command to activate the interface.

To configure the BPQ support you need to associate an AX.25 callsign with your Ethernet hardware address. You should use the following:

```
# axparms -dev eth0 ether
```

This says that AX.25 callsign specified for the port ether in the /etc/ax25/axports file is to be associated with the eth0 device.

10.1. Configuring BPQ to talk to the Linux AX.25 support.

BPQ Ethernet normally uses a multicast address. The Linux implementation does not, and instead it uses the normal Ethernet broadcast address. The NET.CFG file for the BPQ ODI driver should therefore look similar to this:

```
LINK SUPPORT

MAX STACKS 1
MAX BOARDS 1

LINK DRIVER E2000 ; or other MLID to suit your card
```

```
INT 10 ;
PORT 300 ; to suit your card

FRAME ETHERNET_II

PROTOCOL BPQ 8FF ETHERNET_II ; required for BPQ - can change PID

BPQPARAMS ; optional - only needed if you want
; to override the default target addr

ETH_ADDR FF:FF:FF:FF:FF:FF ; Target address
```

11. Ottawa PI/PI2 card driver and Gracilis PacketTwin driver.

The Ottawa PI and the Gracilis PacketTwin are Z8530 SCC based card for IBM PC type machines that are in common usage by Amateur Radio operators worldwide. The PI card supports a high speed half duplex (single DMA channel) port, and a low speed (<9k6bps interrupt driven) half duplex port. The PI2 is a new version of the card that supports an on board radio modem and improved hardware design. The PacketTwin card supports two high speed port and is capable of accepting on board modems.

The PI card driver was written by David Perry, <dp@hydra.carleton.edu> The PacketTwin card driver was written by Craig Small VK2XLZ, <csmall@triode.apana.org.au>. Both drivers are a standard feature of the 1.3.xx kernel.

Please refer to the AX.25 section above for details on how to configure the kernel to include the PI card or the PacketTwin card drivers.

Once you have the appropriate driver configured into your kernel then you should reboot and when you do, you should see mention of the PI or PacketTwin card driver in the messages that appear on the screen while the kernel is booting. The drivers test each of the I/O port addresses that the card might be configured for and reports any that it finds. You should then look at the /proc/net/dev file and you should see reference to devices called pi0a and pi0b or pt0a and pt0b for the PI and PacketTwin cards respectively.

If the devices don't appear then recheck that you have configured and compiled your kernel correctly and that you are in fact actually running your new kernel. If you still don't then this suggests that your PI or PacketTwin card was not detected by the kernel while it booted and may indicate that you have some sort of hardware conflicting with your PI/PT card that prevented it being detected.

If all of the above went as planned then you will need to configure your PI/PT card with an AX.25 address and for IP. The configuration of the PI/PT cards is virtually identical to that of any other IP interface. Something like the following should work ok for you:

```
# /usr/sbin/axparms -setcall pi0a VK2KTJ-2
# /sbin/ifconfig pi0a 44.136.8.5
```

```
# /sbin/ifconfig pi0a netmask 255.255.255.0
# /sbin/ifconfig pi0a broadcast 44.136.8.255
# /sbin/ifconfig pi0a arp mtu 256 up
# /sbin/route add -net 44.136.8.0 netmask 255.255.255.0 pi0a
# /sbin/route add default pi0a
```

Note that pi0a refers to the `a' port on the first PI card found, and that pi0b would therefore refer to the `b' port on the first PI card found. pt0a would therefore be the first port on the first PacketTwin card detected.

Note also the use of the axparms -setcall command to set the AX.25 callsign of the port.

As usual, when this has been done you can test the interface with the ping or telnet command to ensure it is working.

12. Z8530 SCC Kiss Emulation

Joerg Reuter, DL1BKE, jreuter@lykos.tng.oche.de has developed generic support for Z8530 SCC based cards. His driver is configurable to support a range of different types of cards and present an interface that looks like a KISS TNC so you can treat it as though it were a KISS TNC.

12.1. Obtaining and building the configuration tool package.

While the kernel driver is included in the standard kernel distribution, Joerg distributes more recent versions of his driver with the suite of configuration tools that you will need to obtain as well.

You can obtain the configuration tools package from:

db0bm.automation.fh-aachen.de

/incoming/dl1bke/

or:

insl1.etec.uni-karlsruhe.de

/pub/hamradio/linux/z8530/

or:

ftp.ucsd.edu

/hamradio/packet/tcpip/linux
/hamradio/packet/tcpip/incoming/

You will find multiple versions, choose the one that best suits the kernel you intend to use:

z8530drv-2.4a.dl1bke.tar.gz 2.0.*
z8530drv-utils-3.0.tar.gz 2.1.6 or greater

The following command were what I used to compile and install the package for kernel version 2.0.25:

```
# cd /usr/src
# gzip -dc z8530drv-2.4a.dl1bke.tar.gz | tar xvpofz -
# cd z8530drv
# make clean
# make dep
# make module # If you want to build the driver as a module
# make for_kernel # If you want the driver to built into your kernel
# make install
```

After the above is complete you should have three new programs installed in your /sbin directory: gencfg, sccinit and sccstat. It is these programs that you will use to configure the driver for your card.

You will also have a group of new special device files created in your /dev called scc0 .. scc7. These will be used later and will be the `KISS' devices you will end up using.

If you chose to 'make for_kernel' then you will need to recompile your kernel. To ensure that you include support for the z8530 driver you must be sure to answer `Y' to: `Z8530 SCC kiss emulation driver for AX.25' when asked during a kernel `make config'.

If you chose to 'make module' then the new scc.o will have been installed in the appropriate /lib/modules directory and you do not need to recompile your kernel. Remember to use the insmod command to load the module before your try and configure it.

12.2. Configuring the driver for your card.

The z8530 SCC driver has been designed to be as flexible as possible so as to support as many different types of cards as possible. With this flexibility has come some cost in configuration.

There is more comprehensive documentation in the package and you should read this if you have any problems. You should particularly look at doc/scc_eng.doc or doc/scc_ger.doc for more detailed information. I've paraphrased the important details, but as a result there is a lot of lower level detail that I have not included.

The main configuration file is read by the sccinit program and is called /etc/z8530drv.conf. This file is broken into two main stages: Configuration of the hardware parameters and channel configuration. After you have configured this file you need only add:

```
# sccinit
```

into the rc file that configures your network and the driver will be initialised according to the contents of the configuration file. You must do this before you attempt to use the driver.

12.2.1. Configuration of the hardware parameters.

The first section is broken into stanzas, each stanza representing an 8530 chip. Each stanza is a list of keywords with arguments. You may specify up to four SCC chips in this file by default. The #define MAXSCC 4 in scc.c can be increased if you require support for more.

The allowable keywords and arguments are:

chip
the chip keyword is used to separate stanzas. It will take anything as an argument. The arguments are not used.

data_a
this keyword is used to specify the address of the data port for the z8530 channel `A'. The argument is a hexadecimal number e.g. 0x300

ctrl_a
this keyword is used to specify the address of the control port for the z8530 channel `A'. The arguments is a hexadecimal number e.g. 0x304

data_b
this keyword is used to specify the address of the data port for the z8530 channel `B'. The argument is a hexadecimal number e.g. 0x301

ctrl_b
this keyword is used to specify the address of the control port for the z8530 channel `B'. The arguments is a hexadecimal number e.g. 0x305

irq
this keyword is used to specify the IRQ used by the 8530 SCC described in this stanza. The argument is an integer e.g. 5

pclock
this keyword is used to specify the frequency of the clock at the PCLK pin of the 8530. The argument is an integer frequency in Hz which defaults to 4915200 if the keyword is not supplied.

board
the type of board supporting this 8530 SCC. The argument is a character string. The allowed values are:

PA0HZP
the PA0HZP SCC Card

EAGLE
the Eagle card

PC100
the DRSI PC100 SCC card

PRIMUS
the PRIMUS-PC (DG9BL) card

```
BAYCOM
BayCom (U)SCC card

escc
this keyword is optional and is used to enable support for the
Extended SCC chips (ESCC) such as the 8580, 85180, or the 85280.
The argument is a character string with allowed values of `yes'
or `no'. The default is `no'.

vector
this keyword is optional and specifies the address of the vector
latch (also known as "intack port") for PA0HZP cards. There can
be only one vector latch for all chips. The default is 0.

special
this keyword is optional and specifies the address of the
special function register on several cards. The default is 0.

option
this keyword is optional and defaults to 0.

Some example configurations for the more popular cards are as follows:

BayCom USCC

chip 1
data_a 0x300
ctrl_a 0x304
data_b 0x301
ctrl_b 0x305
irq 5
board BAYCOM
#
# SCC chip 2
#
chip 2
data_a 0x302
ctrl_a 0x306
data_b 0x303
ctrl_b 0x307
board BAYCOM

PA0HZP SCC card

chip 1
data_a 0x153
data_b 0x151
ctrl_a 0x152
ctrl_b 0x150
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no
```

```
#
#
#
chip 2
data_a 0x157
data_b 0x155
ctrl_a 0x156
ctrl_b 0x154
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no

DRSI SCC card

chip 1
data_a 0x303
data_b 0x301
ctrl_a 0x302
ctrl_b 0x300
irq 7
pclock 4915200
board DRSI
escc no
```

If you already have a working configuration for your card under NOS, then you can use the gencfg command to convert the PE1CHL NOS driver commands into a form suitable for use in the z8530 driver configuration file.

To use gencfg you simply invoke it with the same parameters as you used for the PE1CHL driver in NET/NOS. For example:

```
# gencfg 2 0x150 4 2 0 1 0x168 9 4915200
```

will generate a skeleton configuration for the OptoSCC card.

12.2.2. Channel Configuration

The Channel Configuration section is where you specify all of the other parameters associated with the port you are configuring. Again this section is broken into stanzas. One stanza represents one logical port, and therefore there would be two of these for each one of the hardware parameters stanzas as each 8530 SCC supports two ports.

These keywords and arguments are also written to the /etc/z8530drv.conf file and must appear after the hardware parameters section.

Sequence is very important in this section, but if you stick with the suggested sequence it should work ok. The keywords and arguments are:

device
this keyword must be the first line of a port definition and
specifies the name of the special device file that the rest of
the configuration applies to. e.g. /dev/scc0

speed
this keyword specifies the speed in bits per second of the
interface. The argument is an integer: e.g. 1200

clock
this keyword specifies where the clock for the data will be
sourced. Allowable values are:

dpll
normal halfduplex operation

external
MODEM supplies its own Rx/Tx clock

divider
use fullduplex divider if installed.

mode
this keyword specifies the data coding to be used. Allowable
arguments are: nrzi or nrz

rxbuffers
this keyword specifies the number of receive buffers to allocate
memory for. The argument is an integer, e.g. 8.

txbuffers
this keyword specifies the number of transmit buffers to
allocate memory for. The argument is an integer, e.g. 8.

bufsize
this keyword specifies the size of the receive and transmit
buffers. The arguments is in bytes and represents the total
length of the frame, so it must also take into account the AX.25
headers and not just the length of the data field. This keyword
is optional and default to 384

txdelay
the KISS transmit delay value, the argument is an integer in mS.

persist
the KISS persist value, the argument is an integer.

slot
the KISS slot time value, the argument is an integer in mS.

tail
the KISS transmit tail value, the argument is an integer in mS.

fulldup
the KISS full duplex flag, the argument is an integer. 1==Full
Duplex, 0==Half Duplex.

wait
the KISS wait value, the argument is an integer in mS.

min
the KISS min value, the argument is an integer in S.

maxkey
the KISS maximum keyup time, the argument is an integer in S.

idle
the KISS idle timer value, the argument is an integer in S.

maxdef
the KISS maxdef value, the argument is an integer.

group
the KISS group value, the argument is an integer.

txoff
the KISS txoff value, the argument is an integer in mS.

softdcd
the KISS softdcd value, the argument is an integer.

slip
the KISS slip flag, the argument is an integer.

12.3. Using the driver.

To use the driver you simply treat the /dev/scc* devices just as you would a serial tty device with a KISS TNC connected to it. For example, to configure Linux Kernel networking to use your SCC card you could use something like:

axattach -s 4800 /dev/scc0 VK2KTJ

You can also use NOS to attach to it in precisely the same way. From JNOS for example you would use something like:

attach asy scc0 0 ax25 scc0 256 256 4800

12.4. The sccstat and sccparam tools.

To assist in the diagnosis of problems you can use the sccstat program to display the current configuration of an SCC device. To use it try:

sccstat /dev/scc0

you will displayed a very large amount of information relating to the configuration and health of the /dev/scc0 SCC port.
The sccparam command allows you to change or modify a configuration after you have booted. Its syntax is very similar to the NOS param command, so to set the txtail setting of a device to 100mS you would use:

sccparam /dev/scc0 txtail 0x8

13. Configuring an interface for a Baycom modem.

Thomas Sailer, <sailer@ife.ee.ethz.ch>, despite the popularly held
belief that it would not work very well, has developed Linux support
for Baycom modems. His driver supports the Ser12 serial port, Par96
and the enhanced Par97 parallel port modems. Further information
about the modems themselves may be obtained from the Baycom Web site
<http://www.baycom.de>.

When the driver is running it follows the standard of looking like a
KISS interface, so you treat it in much the same way as you would the
PI card, PacketTwin or SCC driver ports.

13.1. Compiling the kernel

The driver is only available as a module, so you must have compiled
module support into your kernel, and also selected the appopriate
options to support the Baycom driver during the make config stage when
compiling your kernel.

The relevant options that you must answer `Y' for are:

Prompt for development and/or incomplete code/drivers [Y/n]
Radio network interfaces (CONFIG_NET_RADIO) [N/y/?]
BAYCOM ser12 and par96 kiss emulation driver for AX.25 (CONFIG_BAYCOM) [N/y/m/?]

13.2. Compiling the setbaycom utility

A configuration utility is available available from Thomas Sailer's
home page <http://www.ife.ee.ethz.ch/~sailer/ham/baycom.tar.gz>. The
setbaycom utility allows you to configure multiple Baycom devices. If
you intend to do this then you should obtain it and install it.

To compile and install, do the following:

```
# cd /usr/src
# tar xvfz baycom.tar.gz
# cd baycom
# make
# make install
```

13.3. Creating the /dev device files.

The Baycom driver uses special device files in the /dev directory.
You need to create these manually. The following commands should work
ok for you:

```
# mknod /dev/bc0 c 51 0
# mknod /dev/bc1 c 51 1
# mknod /dev/bc2 c 51 2
# mknod /dev/bc3 c 51 3
```

You will use these later. If you installed the setbaycom utility then
this will have been done for you.

13.4. Loading the module.

When the kernel compilation is complete and you have installed the module baycom.o wherever you normally keep your modules (conventionally they are stored in /lib/modules/2.0.0/), you must start the module. The module takes configuration paramters from the insmod command line, so you must start it manually from an rc file or if you use the kerneld program you must configure it with the relevant paramters so that it supplies them when it loads the module.

If you use kerneld you will need to add the following line to your /etc/conf.modules file:

alias char-major-51 baycom

There are four main items to specify when loading the module, they are:

modem
the baycom modem type you are configuring it for.

1. Ser12 type modem.

2. Par96 or Par97 type modem.

iobase
the i/o address of the serial or parallel port you will use.

0x3f8
COM1:

0x2f8
COM2:

0x378
LPT1:

0x278
LPT2:

irq
the Interrupt Request (IRQ) line your port will use.

4 COM1:

3 COM2:

7 LPT1:

5 LPT2:

options
some baycom specific options.

0 use hardware generated DCD signal.

1 use software DCD signal.

13.5. A small trap to be aware of.

Because the Baycom driver uses the serial and parallel ports of your machines, and because it is a low level driver for these, it competes with the existing serial and parallel drivers in the kernel. There are some ways of working around this problem. The first way is to make sure that you load the Baycom module first so that it takes the hardware it needs before the serial or parallel device driver modules load and search for their own. With the serial driver you have the luxury of being able to disable it for a single port using the setserial command, this will be demonstrated in the examples. If you are using the parallel port modems then beware of the lp.o Line Printer and plip.o Parallel Line IP modules.

13.6. Some example configurations.

These examples are for the two most common configurations.

Disable the serial driver for COM1: then configure the Baycom driver for a Ser12 serial port modem on COM1: with the software DCD option enabled:

```
# setserial /dev/ttyS0 uart none
# insmod baycom modem=1 iobase=0x3f8 irq=4 options=1
```

Par96 parallel port type modem on LPT1: using hardware DCD detection:

```
# insmod baycom modem=2 iobase=0x378 irq=7 options=0
```

The first device created is /dev/bc0, the second is /dev/bc1 etc.

13.7. Configuring multiple devices.

Using the insmod program and its command line arguments you can only configure one Baycom modem. The setbaycom utility allows you to configure multiple Baycom devices.

The command line arguments needed are identical to those you'd supply to the module if you were configuring just a single device. For example, to configure both of the devices presented above you would use the commands:

```
# setbaycom -i /dev/bc0 -p ser12 0x3f8 4 1
# setbaycom -i /dev/bc1 -p par96 0x378 7 0
```

13.8. Actually using the devices.

This device driver when loaded looks like a serial tty driver with a KISS TNC attached. This means that configuration of the AX.25 software for this driver is identical to the configuration for a KISS TNC presented earlier. You need to use the axattach program and add the port to your /etc/ax25/axports file. The only difference is that you would use the device /dev/bc0 instead of /dev/ttyS0.

14. Configuring ax25d to accept incoming AX.25/NetRom connections.

Linux is a powerful operating system and offers a great deal of flexibility in how it is configured. With this flexibility comes a

cost in configuring it to do what you want. When configuring your Linux machine to accept incoming AX.25 or NetRom connections there are a number of questions you need to ask yourself. The most important of which is: "What do I want users to see when they connect?". As detailed in the HAM-HOWTO there are BBS systems that are being developed that you might want users to see when they connect, alternatively you might want to give users a login prompt so that they can make use of a shell account, or you might even have written your own program, such as a customised database or a game, that you want people to connect to. Whatever you choose, you must tell the AX.25 software about this so that it knows what software to run when it accepts an incoming AX.25 connection.

14.1. Creating the /etc/ax25/ax25d.conf file.

This file is the configuration file for the ax25d AX.25 daemon which handles incoming AX.25 and NetRom connections.

The file is a little cryptic looking at first, but you'll soon discover it is very simple in practice, with a small trap for you to be wary of.

The format of the ax25d.conf file is as follows:

```
# This is a comment and is ignored by the ax25d program.
[<interface_call>]
<peer1> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer2> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
defaults window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer3> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
default window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
```

Where:

at the start of a line marks a comment and is completely ignored by the ax25d program.
<interface_call>
is the AX.25 callsign of the AX.25 or NetRom interface that this particular paragraph is for.

<peer>
is the callsign of the peer node that this particular configuration applies to. If you don't specify an SSID here then any SSID will match.

window
is the AX.25 Window parameter (K) or MAXFRAME parameter for this configuration.

T1 is the Frame retransmission (T1) timer in half second units.

T2 is the amount of time the AX.25 software will wait for another incoming frame before preparing a response in 1 second units.

T3 is the amount of time of inactivity before the AX.25 software will disconnect the session in 1 second units.

N2 is the number of consecutive retransmissions that will occur before the connection is closed.

<mode>
provides a mechanism for determining certain types of general permissions. The modes are enabled or disabled by supplying a combination of characters, each representing a permission. The characters may be in either upper or lower case and must be in a single block with no spaces.

u/U
UTMP - currently unsupported.

v/V
Valid call - currently unsupported.

q/Q
Quiet - Don't log connection

n/N
check NetRom Neighbour - currently unsupported.

d/D
Disallow Digipeaters - Connections must be direct, not digipeated.

l/L
Lockout - Don't allow connection.

*/0
marker - place marker, no mode set.

<uid>
is the userid that the program to be run to support the connection should be run as.

<cmd>
is the full pathname of the command to be run, with no arguments specified.

<cmd-name>
is the text that should appear in a ps as the command name running (normally the same as <cmd> except without the directory path information.

<arguments>
are the command line argument to be passed to the <:cmd> when it is run. You pass useful information into these arguments by use of the following tokens:

%U AX.25 callsign of the connected party without the SSID, in uppercase.

%u AX.25 callsign of the connected party without the SSID, in lowercase.

%S AX.25 callsign of the connected party with the SSID, in uppercase.

%s AX.25 callsign of the connected party with the SSID, in lowercase.

You need one section in the above format for each AX.25 or NetRom interface you want to accept incoming AX.25 or NetRom connections on.

There are two special lines in the paragraph, one starts with the string `defaults' and other starts with the string `default' (yes there is a difference). These lines serve special functions.

The `default' lines purpose should be obvious, this line acts as a catch-all, so that any incoming connection on the <interface_call> interface that doesn't have a specific rule will match the `default' rule. If you don't have a `default' rule, then any connections not matching any specific rule will be disconnected immediately without notice.

The `defaults' line is a little more subtle, and here is the trap I mentioned earlier. In any of the fields for any definition for a peer you can use the `*' character to say `use the default value'. The `default' line is what sets those default values. The kernel software itself has some defaults which will be used if you don't specify any. The trap is that the these defaults apply only to those rules below the `default' line not to those above. You may have more than one `default' rule per interface definition, and in this way you may create groups of default configurations.

14.2. A simple example ax25d.conf file.

Ok, an illustrative example:

```
# ax25d.conf for VK2KTJ - 21/11/95
# This configuration uses the AX.25 port defined earlier.
[VK2KTJ-0]
NOCALL * * * * * L guest /usr/games/fortune
#
defaults 1 10 * * * * root /usr/sbin/axspawn axspawn %u +
VK2XLZ-1 * * * * * * * * *
VK2DAY-1 * * * * * * * * *
default 1 10 5 100 5 * root /usr/sbin/pms pms -a -o vk2ktj
#
```

This example says that anybody connecting to the interface on my machine with the callsign VK2KTJ-0 will have the following rules applied:

Anyone whose callsign is set to `NOCALL' should use the kernel default parameters and have the fortune program run as guest for them.

The defaults line changes two parameters from the kernel defaults (Window and T1) and will run the /usr/sbin/axspawn program for them. Any copies of /usr/sbin/axspawn run this way will appear as axspawn in a ps listing for convenience. The next two lines definitions for two stations who will receive those permissions.

The last line in the paragraph is the `catch all' definition that everybody else will get (including VK2XLZ and VK2DAY using any other SSID other than -1). This definition sets all of the parameters implicitly and will cause the pms program to be run with a command line argument indicating that it is being run for an AX.25 connection (assuming VK2KTJ-0 to be an AX.25 interface) and that the owner callsign is VK2KTJ. (See the `Configuring the PMS' section below for more details).

- --- BEGIN Linux AX25 HOWTO part 2/2 ---

If you wanted to define rules for another interface, a NetRom
interface for example, then you would add another paragraph coded in
the same way with rules and callsign appropriate to it.

This example is a contrived one but I think it illustrates clearly the
important features of the syntax of the configuration file. Jonathon
includes a much longer and more detailed example in the ax25-utils
package that you should look at if you need more information.

14.3. Some ax25d configuration hints.

Here are some simple hints for you to consider while configuring ax25d
on your machine:

Split your services up
You have 10 SSID's, make use of them. If you have configured
your ax25 port for tcp/ip then it will use the callsign you
assigned in your axattach command. It is best to avoid mixing
tcp/ip, NetRom and plain AX.25 connections on the same SSID.
Split them up and you will avoid problems later.

Use the defaults feature
Choosing sensible defaults can simplify your configurations
immensely. If you choose sensible defaults you will only need to
add exceptions to the default as things change over time.

14.4. Starting ax25d

When you have the two configuration files completed you start ax25d
with the command:

/usr/sbin/ax25d

When this is run people should be able to make AX.25 connections to
your Linux machine. Remember to put the ax25d command in your rc files

so that it is started automatically when you reboot each time.

14.5. Configuring the node software.

The node software was developed by Tomi Manninen
<tomi.manninen@hut.fi> and was based on the original PMS program. It
provides a fairly complete and flexible node capability that is easily
configured. It allows users once they are connected to make telnet,
netrom or telnet connections out and to obtain various sorts of
information such as Finger, Nodes and Heard lists etc.

The node would normally be invoked from the ax25d program although it
is also capable of being invoked from the tcp/ip inetd program to
allow users to telnet to your machine and obtain access to it, or by
running it from the command line.

14.5.1. Creating the /etc/ax25/node.conf file.

The node.conf file is where the main configuration of the node takes
place. It is a simple text file and its format is as follows:

```
# /etc/ax25/node.conf
# configuration file for the node(8) program.
#
# Lines beginning with '#' are comments and are ignored.

# Hostname
# Specifies the hostname of the node machine
hostname radio.gw.vk2ktj.ampr.org

# Local Network
# allows you to specify what is consider 'local' for the
# purposes of permission checking using nodes.perms.
localnet 44.136.8.96/29

# Hide Ports
# If specified allows you to make ports invisible to users. The
# listed ports will not be listed by the (P)orts command.
hiddenports 70cm 2m

# Callserver
# If configured the node provides users with access to a callserver.
callserver zone.oh7rba.ampr.org

# Node Idle Timeout
# Specifies the idle time for connections to this node in seconds.
idletimout 1800

# Connection Idle Timeout
# Specifies the idle timer for connections made via this node in
# seconds.
conntimeout 1800
```

```
# Reconnect
# Specifies whether users should be reconnected to the node
# when their remote connections disconnect, or whether they
# should be disconnected complete.
reconnect on

# Command Aliases
# Provide a way of making complex commands simple.
alias CONV "telnet vk1xwt.ampr.org 3600"
alias BBS "connect radio vk2xsb"
```

14.5.2. Creating the /etc/ax25/node.perms file.

The node allows you to assign permissions to users. These permissions allow you to determine which users should be allowed to make use of options such as the (T)elnet, and (C)onnect commands, for example, and which shouldn't. The node.perms file is where this information is stored and contains five key fields. For all fields an asterisk `*' character matches anything. This is useful for building default rules.

user
The first field is the callsign or user to which the permissions should apply. Any SSID value is ignored, so you should just place the base callsign here.

method
Each protocol or access method is also given permissions. For example you might allow users who have connected via AX.25 or NetRom to use the (C)onnect option, but prevent others, such as those who are telnet connected from a non-local node from having access to it. The second field therefore allows you to select which access method this permissions rule should apply to. The access methods allowed are:

```
method description
------ ------------------------------------------------------------
ax25 User connected by AX.25
netrom User connected by NetRom
host User started node from command line
local User is telnet connected from a 'local' host
ampr User is telnet connected from an amprnet address (44.0.0.0)
inet user is telnet connected from a non-loca, non-ampr address.
```

port
For AX.25 users you can control permissions on a port by port basis too if you choose. This allows you to determine what AX.25 are allowed to do based on which of your ports they have connected to. The third field contains the port name if you are using this facility. This is useful only for AX.25 connections.

password
You may optionally configure the node so that it prompts users to enter a password when they connect. This might be useful to help protect specially configured users who have high authority

levels. If the fourth field is set then its value will be the
password that will be accepted.

permissions
The permissions field is the final field in each entry in the
file. The permissions field is coded as a bit field, with each
facility having a bit value which if set allows the option to be
used and if not set prevents the facility being used. The list
of controllable facilities and their corresponding bit values
are:

value description
----- --
1 Login allowed.
2 AX25 (C)onnects allowed.
4 NetRom (C)onnects allowed.
8 (T)elnet to local hosts allowed.
16 (T)elnet to amprnet (44.0.0.0) hosts allowed.
32 (T)elnet to non-local, non-amprnet hosts allowed.
64 Hidden ports allowed for AX.25 (C)onnects.

To code the permissions value for a rule, simply take each of the
permissions you want that user to have and add their values
together. The resulting number is what you place in field five.

A sample nodes.perms might look like:

```
# /etc/ax25/node.perms
#
# The node operator is VK2KTJ, has a password of 'secret' and
# is allowed all permissions by all connection methods
vk2ktj * * secret 127

# The following users are banned from connecting
NOCALL * * * 0
PK232 * * * 0
PMS * * * 0

# INET users are banned from connecting.
* inet * * 0

# AX.25, NetRom, Local, Host and AMPR users may (C)onnect and (T)elnet
# to local and ampr hosts but not to other IP addresses.
* ax25 * * 31
* netrom * * 31
* local * * 31
* host * * 31
* ampr * * 31
```

14.5.3. Configuring node to run from ax25d

The node program would normally be run by the ax25d program. To do
this you need to add appropriate rules to the /etc/ax25/ax25d.conf

file. In my configuration I wanted users to have a choice of either connecting to the node or connecting to other services. ax25d allows you to do this by cleverly creating creating port aliases. For example, given the ax25d configuration presented above, I want to configure node so that all users who connect to VK2KTJ-1 are given the node. To do this I add the following to my /etc/ax25/ax25d.conf file:

```
[VK2KTJ-1 VIA VK2KTJ-0]
default * * * * * 0 root /usr/sbin/node node radio
```

This simply says that all users who connect to VK2KTJ-1 on the same device (by the same port) as VK2KTJ-0 should cause the node program to be run with the name of the port they have connected via, in this case you will recall the /etc/ax25/axports specifies the port name as radio that supports the callsign VK2KTJ-0.

14.5.4. Configuring node to run from inetd

If you want users to be able to telnet a port on your machine and obtain access to the node you can go this fairly easily. The first thing to decide is what port users should connect to. In this example I've arbitrarily chosen port 4000, though Tomi gives details on how you could replace the normal telnet daemon with the node in his documentation.

You need to modify two files.

To /etc/services you should add:

```
node 4000/tcp #OH2BNS's node software
```

and to /etc/inetd.conf you should add:

```
node stream tcp nowait root /usr/sbin/node node
```

When this is done, and you have restarted the inetd program any user who telnet connects to port 4000 of your machine will be prompted to login and if configured, their password and then they will be con&#65533;nected to the node.

14.6. Configuring axspawn.

The axspawn program is a simple program that allows AX.25 stations who connect to be logged in to your machine. It is invoked from the ax25d program as described above. To allow a user to log in to your machine you should add a line similar to the following into your /etc/ax25/ax25d.conf file:

```
default * * * * * 1 root /usr/sbin/axspawn axspawn %u
```

If the line ends in the + character then the connecting user must hit return before they will be allowed to login. The default is to not wait. Any individual host configurations that follow this line will have the axspawn program run when they connect. When axspawn is run it

first checks that the command line argument it is supplied is a legal
callsign, strips the SSID, then it checks that /etc/passwd file to see
if that user has an account configured. If there is an account, and
the password is either "" (null) or + then the user is logged in, if
there is anything in the password field the user is prompted to enter
a password. If there is not an existing account in the /etc/passwd
file then axspawn may be configured to automatically create one.

14.6.1. Creating the /etc/ax25/axspawn.conf file.

You can alter the behaviour of axspawn in various ways by use of the
/etc/ax25/axspawn.conf file. This file is formatted as follows:

```
# /etc/ax25/axspawn.conf
#
# allow automatic creation of user accounts
create yes
#
# guest user if above is 'no' or everything else fails. Disable with "no"
guest no
#
# group id or name for autoaccount
group ax25
#
# first user id to use
first_uid 2001
#
# maximum user id
max_uid 3000
#
# where to add the home directory for the new users
home /home/ax25
#
# user shell
shell /bin/bash
#
# bind user id to callsign for outgoing connects.
associate yes
```

The eight configurable characteristics of axspawn are as follows:

# indicates a comment.

create
if this field is set to yes then axspawn will attempt to
automatically create a user account for any user who connects
and does not already have an entry in the /etc/passwd file.

guest
this field names the login name of the account that will be used
for people who connect who do not already have accounts if
create is set to no. This is usually ax25 or guest.

group
this field names the group name that will be used for any users
who connect and do not already have an entry in the /etc/passwd
file.

first_uid
this is the number of the first userid that will be
automatically created for new users.

max_uid
this is the maximum number that will be used for the userid of
new users.

home
this is the home (login) directory of new users.

shell
this is the login shell of any new users.

associate
this flag indicates whether outgoing AX.25 connections made by
this user after they login will use their own callsign, or your
stations callsign.

14.7. Configuring the pms

The pms program is an implementation of a simple personal message system. It was originally written by Alan Cox. Dave Brown, N2RJT, <dcb@vectorbd.com> has taken on further development of it. At present it is still very simple, supporting only the ability to send mail to the owner of the system and to obtain some limited system information but Dave is working to expand its capability to make it more useful.

Configuring the pms program is still a little clumsy at the moment because it is new but bare with it while Dave works on it. The only difficult part is modifying the source code to support your local mail delivery agent and whether you use the ttylinkd program or the talk-ax25 program.

After that is done there are a couple of simple files that you should create that give users some information about the system and then you need to add appropriate entries into the ax25d.conf file so that connected users are presented with the PMS.

14.7.1. Customising pms.c

If you take a look at the pms.c file in the ax25-utils package you will see that there a few items that you can configure. Perhaps the most important to configure is the one that allows you to specify what local mail delivery agent you use. In most installations the deliver program may well work, but in the minimal installation on my gateway machine I needed to modify the line that previously said:

#define MAIL_DELIVERY_AGENT "deliver %s"

to:

#define MAIL_DELIVERY_AGENT "/bin/mail.local %s"

There is no easy way of knowing what local delivery agent your machine is configured to use, so perhaps you could simply look for either of these files in the obvious places and choose whichever seems to be there.

I also have the ttylinkd program installed, so I needed to modify the section relating to it. I keep my copy of the ttylinkd program in my /usr/sbin directory, so I modified the line that previously said:

/* #define MY_TALK "/usr/local/bin/ttylinkd" */

to:

#define MY_TALK "/usr/sbin/ttylinkd"

If you use the talk-ax25 program then you would remove the /* and */ from around that line instead.

There is one last definition that might be useful to you, and that is if you have a default email gateway. This line is the line containing the string MY_GATEWAY. If you have an email gateway that you use, then you should remove the comments from this line and change the address to that of your gateway.

14.7.2. Create the /etc/ax25/pms.motd file.

The /etc/ax25/pms.motd file contains the `message of the day' that users will be presented with after they connect and receive the usual BBS id header. The file is a simple text file, any text you include in this file will be sent to users.

14.7.3. Create the /etc/ax25/pms.info file.

The /etc/ax25/pms.info file is also a simple text file in which you would put more detailed information about your station or configuration. This file is presented to users in response to their issuing of the Info command from the PMS> prompt.

14.7.4. Associate AX.25 callsigns with system users.

When a connected user sends mail to an AX.25 callsign, the pms expects that callsign to be mapped, or associated with a real system user on your machine. This is described in a section of its own.

14.7.5. Add the PMS to the /etc/ax25/ax25d.conf file.

Adding the pms to your ax25d.conf file is very simple. There is one small thing you need to think about though. Dave has added command line arguments to the PMS to allow it to handle a number of different text end-of-line conventions. AX.25 and NetRom by convention expect the end-of-line to be carriage return, linefeed while the standard unix end-of-line is just newline. So, for example, if you wanted to

add an entry that meant that the default action for a connection received on an AX.25 port is to start the PMS then you would add a line that looked something like:

default 1 10 5 100 5 0 root /usr/sbin/pms pms -a -o vk2ktj

This simply runs the pms program, telling it that it is an AX.25 connection it is connected to and that the PMS owner is vk2ktj. Check the man page for what you should specify for other connection methods.

14.7.6. Test the PMS.

To test the PMS, you can try the following command from the command line:

/usr/sbin/pms -u vk2ktj -o vk2ktj

Substitute your own callsign for mine and this will run the pms, telling it that it is to use the unix end-of-line convention, and that user logging in is vk2ktj. You can do all the things connected users can.

Additionally you might try getting some other node to connect to you to confirm that your ax25d.conf configuration works.

14.8. Configuring the user_call programs.

The `user_call' programs are really called: ax25_call and netrom_call. They are very simple programs designed to be called from ax25d to automate network connections to remote hosts. They may of course be called from a number of other places such as shell scripts or other daemons such as the node program.

They are like a very simple call program. They don't do any meddling with the data at all, so the end of line handling you'll have to worry about yourself.

Let's start with an example of how you might use them. Imagine you have a small network at home and that you have one linux machine acting as your Linux radio gateway and another machine, lets say a BPQ node connected to it via an ethernet connection.

15. Associating AX.25 callsigns with Linux users.

There are a number of situations where it is highly desirable to associate a callsign with a linux user account. One example might be where a number of amateur radio operators share the same linux machine and wish to use their own callsign when making calls. Another is the case of PMS users wanting to talk to a particular user on your machine.

The AX.25 software provides a means of managing this association of linux user account names with callsigns. We've mentioned it once already in the PMS section, but I'm spelling it out here to be sure you don't miss it.

You make the association with the axparms command. An example looks like:

```
# axparms -assoc vk2ktj terry
```

This command associates that AX.25 callsign vk2ktj with the user terry on the machine. So, for example, any mail for vk2ktj on the pms will be sent to Linux account terry.

Remember to put these associations into your rc file so that they are available each time your reboot.

Note you should never associate a callsign with the root account as this can cause configuration problems in other programs.

16. HOWTO link NOS and the Linux kernel networking software

Many people like to run some version of NOS under Linux because it has all of the features and facilities they are used to. Most of those people would also like to have the NOS running on their machine capable of talking to the Linux kernel so that they can offer some of the linux capabilities to radio users. Normally if you wanted radio users to be able to connect to the BPQ node they would either have to digipeat through your linux node, or connect to the node program on your linux node and then connect from it. The ax25_call program can simplify this if it is called from the ax25d program.

Imagine the BPQ node has the callsign VK2KTJ-9 and that the linux machine has the AX.25/ethernet port named `bpq'. Let us also imagine the Linux gateway machine has a radio port called `radio'.

An entry in the /etc/ax25/ax25d.conf that looked like:

```
[VK2KTJ-1 via radio]
parameters 1 5 2 900 900 15 0
default * * * * * * * root ax25_call bpq vk2ktj-9
```

would enable users to connect direct to `VK2KTJ-1' which would actu
ally be the Linux ax25d daemon and then be automatically switch to an AX.25 connection to `VK2KTJ-9' via the `bpq' interface.

There are all sorts of other possible configurations that you might try. One amateur has used this utility to make connections to a remote BBS easier. Normally the users would have to manually enter a long connection string to make the call so he created an entry that made the BBS appear as though it were on the local network by having his ax25d proxy the connection to the remote machine.

16.1. Linking NOS and Linux using a pipe device

Brandon S. Allbery, KF8NH, contributed the following information to explain how to interconnect the NOS running on a Linux machine with the kernel code using the Linux pipe device.

Since both Linux and NOS support the slip protocol it is possible to link the two together by creating a slip link. You could do this by

using two serial ports with a loopback cable between them, but this would be slow and costly. Linux provides a feature that many other Unix-like operating systems provide called `pipes'. These are special pseudo devices that look like a standard tty device to software but in fact loopback to another pipe device. To use these pipes the first program must open the master end of the pipe, and the open then the second program can open the slave end of the pipe. When both ends are open the programs can communicate with each other simply by writing characters to the pipes in the way they would if they were terminal devices.

To use this feature to connect the Linux Kernel and a copy of NOS, or some other program you first must choose a pipe device to use. You can find one by looking in your /dev directory. The master end of the pipes are named: ptyp[1-f] and the slave end of the pipes are known as: ttyp[1-f]. Remember they come in pairs, so if you select /dev/ptypf as your master end then you must use /dev/ttypf as the slave end.

Once you have chosen a pipe device pair to use you should allocate the master end to you linux kernel and the slave end to the NOS program, as the Linux kernel starts first and the master end of the pipe must be opened first. You must also remember that your Linux kernel must have a different IP address to your NOS, so you will need to allocate a unique address for it if you haven't already.
You configure the pipe just as if it were a serial device, so to create the slip link from your linux kernel you can use commands similar to the following:

```
# /sbin/slattach -s 38400 -p slip /dev/ptypf &
# /sbin/ifconfig sl0 broadcast 44.255.255.255 pointopoint 44.70.248.67 /
mtu 1536 44.70.4.88
# /sbin/route add 44.70.248.67 sl0
# /sbin/route add -net 44.0.0.0 netmask 255.0.0.0 gw 44.70.248.67
```

In this example the Linux kernel has been given IP address 44.70.4.88 and the NOS program is using IP address 44.70.248.67. The route command in the last line simply tells your linux kernel to route all datagrams for the amprnet via the slip link created by the slattach command. Normally you would put these commands into your /etc/rc.d/rc.inet2 file after all your other network configuration is complete so that the slip link is created automatically when you reboot. Note: there is no advantage in using cslip instead of slip as it actually reduces performance because the link is only a virtual one and occurs fast enough that having to compress the headers first takes longer than transmitting the uncompressed datagram.

To configure the NOS end of the link you could try the following:

```
# you can call the interface anything you want; I use "linux" for convenience.
attach asy ttypf - slip linux 1024 1024 38400
route addprivate 44.70.4.88 linux
```

These commands will create a slip port named `linux' via the slave end of the pipe device pair to your linux kernel, and a route to it to make it work. When you have started NOS you should be able to ping and telnet to your NOS from your Linux machine and vice versa. If not, double check that you have made no mistakes especially that you have the addresses configured properly and have the pipe devices around the right way.

17. The /proc/ file system entries.

The /proc filesystem contains a number of files specifically related to the AX25 and NetRom kernel software. These files are normally used by the AX52 utilities, but they are plainly formatted so you may be interested in reading them. The format is fairly easily understood so I don't think much explanation will be necessary.

arp
contains the list of Address Resolution Protocol mappings of IP addresses to MAC layer protocol addresses. These can can AX.25, ethernet or some other MAC layer protocol.

ax25
contains the AX.25 port configuration information.

ax25%lowbar;bpqether
contains the AX25 over ethernet BPQ style callsign mappings.
ax25_calls
contains the linux userid to callsign mappings set my the axparms -assoc command.

ax25_route
contains AX.25 digipeater path information.

nr contains the NetRom port configuration information.

nr_neigh
contains information about the NetRom neighbours known to the NetRom software.

nr_nodes
contains information about the NetRom nodes known to the NetRom software.

18. Walking on the wilder side .. the developmental software

If all of the above doesn't satisfy your desire to push the limits there is plenty more for you to play with.

There have a been a number of enhancements that are available as experimental software for you to try. They come either as patches against the 2.0.* kernels, or in the alpha 2.1.* kernels.

Be warned though, this software is new, pretty much untested and likely to contain bugs. If that worries you, then ignore this section of the document.

18.1. Enhanced versions of just about everything.

The 2.1.* kernels have enhanced versions of nearly all of the protocols and drivers. The most significant of the enhancements are:

modularised
the protocols and drivers have all been modularised so that you can insmod and rmmod them whenever you wish. This reduces the kernel memory requirements for infrequently used modules and makes development and bug hunting much simpler.

all drivers are now network drivers
all of the network devices such as Baycom, SCC, PI, Packettwin etc now present a normal network interface, that is they now look like the ethernet driver does, they no longer look like KISS TNC's. A new utility called net2kiss allows you to build a kiss interface to these devices if you wish.

bug fixed
there have been many bug fixes and new features added to the drivers and protocols.

To take advantage of the features of the 2.1.* AX.25 support you must use the new ax25-utils package. You shouldn't use a kernel older than 2.1.17 and you should use ax25-utils-2.1.17.tar.gz which is available from the sites listed in "The AX25 Utilities" section above.

18.2. ROSE Packet Layer Support

The Rose packet layer protocol is similar to layer three of the X.25 specification. The kernel based Rose support is a modified version of the FPAC Rose implementation
<http://fpac.lmi.ecp.fr/f1oat/f1oat.html>.

18.2.1. Configuring /etc/ax25/rsports

The file where you configure your Rose interfaces is the /etc/ax25/rsports file. This file describes the Rose port in much the same way as the /etc/ax25/axports file describes the AX.25 ports.

This file is formatted as follows:

name addresss description

Where:

name
is the text name that you wish to refer to the port by.

address
is the 10 digit Rose address you wish to assign to this port.

description
is a free text description of the port.

An example would look something like the following:

rose 5050924760 Rose Port

Note that the ports are referred to by name by programs such as call.

18.2.2. Creating the Rose device

When you have created the /etc/ax25/rsports file you may create the Rose device in much the same way as you did for the AX.25 devices. This time you use the rsattach command:

rsattach rose

This command would start the Rose device (rose0) named rose configured with the details specified in the /etc/ax25/rsports file.

18.2.3. Configuring Rose Routing

The Rose protocol currently supports only static routing. The rsparms utility allows you to configure your Rose routing table under Linux.

For example:

rsparms -nodes add 5050295502 radio vk2xlz

would add a route to Rose node 5050295502 via an AX.25 port named `radio' in your /etc/ax25/axports file to a neighbour with the call&#65533;sign VK2XLZ.

Kernels 2.1.17 and later support variable length Rose masks, so that you you may specify a route that looks like:

rsparms -nodes add 5050295502/4 radio vk2xlz

which would be identical to the previous example except that it would match any destination address that matched the first four digits sup&#65533;plied, in this case any address commencing with the digits 5050. An alternate form for this command is:

rsparms -nodes add 5050/4 radio vk2xlz

which is probably the less ambiguous form.

18.2.4. Testing the Rose interface.

You now should be able to make outgoing Rose connections. To test Rose connections you can use the call program as demonstrated:

/usr/bin/call rose VK2DAY 5050928860

to connect to VK2DAY at Rose node 5050928860.

The call program is a linemode terminal program for making Rose calls. It recognises lines that start with `~' as command lines. The `~.' command will close the connection.

Please refer to the man page in /usr/man for more information.

18.2.5. Configuring ax25d to accept incoming Rose connections

The ax25d daemon included in the ax25-utils-2.1.* packages supports accepting incoming Rose connections. The procedure is virtually identical to configuration for AX.25, or NetRom with the major difference being that the port label has taken on a slightly modified syntax. An example Rose configuration would look something like:

```
#
# Format for ROSE:
# {Callsign VIA ROSE port}
#
{* VIA rose}
parameters 7 100 10 * * 5 0
#
default * * * * * * * root /usr/sbin/pms -b -u %u -o vk2ktj
```

The `* VIA rose' says: `Accept connections to any callsign via the rose device named `rose' in the /etc/ax25/rsports file. If the entry looked like:

```
{VK2KTJ-9 VIA rose}
...
...
```

then only connections to VK2KTJ-9 received via the port named `rose' would match.

18.3. Enhanced Baycom modem driver.

In kernel 2.1.17 and newer, the setbaycom utility has been replaced by the sethdlc utility. Additionally the Baycom driver no longer uses device file in the /dev directory, so if you've upgraded you can delete the old ones with:

```
# rm /dev/bc[0-9]
```

18.3.1. Configuring the Baycom driver.

Your first step should be to determine the i/o and addresses of the serial or parallel port(s) you have Baycom modem(s) connected to. When you have these you must configure the Baycom driver with them.

The sethdlc utility allows you to configure the driver with these parameters, or, if you have only one Baycom modem installed you may specify the parameters on the insmod commmand line when you load the Baycom module.

For example, a simple configuration. Disable the serial driver for COM1: then configure the Baycom driver for a Ser12 serial port modem on COM1: with the software DCD option enabled:

```
# setserial /dev/ttyS0 uart none
# insmod baycom modem=1 iobase=0x3f8 irq=4 options=1
```

Par96 parallel port type modem on LPT1: using hardware DCD detection:

```
# insmod baycom modem=2 iobase=0x378 irq=7 options=0
```

This is not really the preferred way to do it. The sethdlc utility works just as easily with one device as with many.

The sethdlc man page has the full details, but a couple of examples will illustrate the most important aspects of this configuration. The following examples assume you have already loaded the baycom module using:

insmod baycom

Configure the bc0 device driver as a Parallel port Baycom modem on LPT1: with software DCD:

sethdlc -p -i bc0* mode par96 io 0x378 irq 7

Configure the bc1 device driver as a Serial port Baycom modem on COM1:

sethdlc -p -i bc1 modem ser12 io 0x3f8 irq 4

18.3.2. Configuring the AX.25 channel access parameters.

Configuring the what ? The AX.25 channel access parameters are the equivalent of the KISS ppersist, txdelay and slottime type parameters. Again you use the sethdlc utility for this.

Again the sethdlc man page is the source of the most complete information but another example of two won't hurt:

Configure the bc0 device with TxDelay of 100 mS, SlotTime of 50mS, PPersist of 128 and full duplex:

sethdlc -i bc0 -a txd 10 slot 5 ppersist 128 full

Note that the timing values are in 10's of milliseconds.

18.4. Soundcard DSP based modem driver.

Thomas Sailer has built a new driver for the kernel that allows you to use your soundcard as a modem. Connect your radio directly to your soundcard to play packet! Thomas recommends at least a 486DX2/66 if you want to use this software as all of the digital signal processing is done by the main CPU.
The driver currently emulates 1200 bps AFSK and 9600 FSK (G3RUH compatible) modem types. The only sound cards currently supported are SoundBlaster and WindowsSoundSystem Compatible models. The sound cards require some circuitry to help them drive the Push-To-Talk circuitry, and information on this is available from Thomas's SoundModem PTT circuit web page <http://www.ife.ee.ethz.ch/~sailer/pcf/ptt_circ/ptt.html>. There are quite a few possible options, they are: detect the sound output from the soundcard, or use output from a parallel port, serial port or midi port. Circuit examples for each of these are on Thomas's site.

The SoundModem driver creates network devices called: sm0, sm1, sm2 etc when it is configured.

Note: the SoundModem driver competes for the same resources as the Linux sound driver. So if you wish to use the SoundModem driver you must ensure that the Linux sound driver is not installed. You can of course compile them both as modules and insert and remove them as you wish.

18.4.1. Configuring the sound card.

The SoundModem driver does not initialise the sound card. The ax25-utils package includes a utility to do this called `setcrystal'. Its syntax is fairly straightforward:

setcrystal [-w wssio] [-s sbio] [-f synthio] [-i irq] [-d dma] [-c dma2]

So, for example, if you wished to configure a soundblaster card at i/o base address 0x388, irq 10 and DMA 1 you would use:

setcrystal -s 0x388 -i 10 -d 1

To configure a WindowSoundSystem card at i/o base address 0x534, irq 5, DMA 3 you would use:

setcrystal -w 0x534 -i 5 -d 3

The [-f synthio] parameter is the set the synthesiser address, and the [-c dma2] parameter is to set the second DMA channel to allow full duplex operation.

18.4.2. Configuring the SoundModem driver.

When you have configured the soundcard you need to configure the driver telling it where the sound card is located and what sort of modem you wish it to emulate.

The sethdlc utility allows you to configure the driver with these parameters, or, if you have only one soundcard installed you may specify the parameters on the insmod commmand line when you load the SoundModem module.
For example, a simple configuration, with one SoundBlaster soundcard configured as described above emulating a 1200 bps modem:

insmod soundmodem hw=0 mode=0 iobase=0x220 irq=5 dma=1

This is not really the preferred way to do it. The sethdlc utility works just as easily with one device as with many.

The sethdlc man page has the full details, but a couple of examples will illustrate the most important aspects of this configuration. The following examples assume you have already loaded the SoundModem modules using:

insmod soundmodem

Configure the driver to support the WindowsSoundSystem card we configured above to emulate a G3RUH 9600 compatible modem as device sm0 using a parallel port at 0x378 to key the Push-To-Talk:

```
# sethdlc -p -i sm0 mode wss:fsk9600 io 0x534 irq 5 dma 3 pario 0x378
# ifconfig sm0 up
```

Configure the driver to support the SoundBlaster card we configured above to emulate a 1200 bps AFSK modem as device sm1 using the serial port located at 0x2f8 to key the Push-To-Talk:

```
# sethdlc -p -i sm1 mode sbc:afsk1200 io 0x388 irq 10 dma 1 serio 0x2f8
# ifconfig sm1 up
```

18.4.3. Configuring the AX.25 channel access parameters.

Configuring the what ? The AX.25 channel access parameters are the equivalent of the KISS ppersist, txdelay and slottime type parameters. Again you use the sethdlc utility for this.

Again the sethdlc man page is the source of the most complete information but another example of two won't hurt:

Configure the sm0 device with TxDelay of 100 mS, SlotTime of 50mS, PPersist of 128 and full duplex:

```
# sethdlc -i sm0 -a txd 10 slot 5 ppersist 128 full
```

Note that the timing values are in 10's of milliseconds.

18.4.4. Setting the audio levels and tuning the driver.

It is very important that the audio levels be set correctly for any radio based modem to work. This is equally true of the SoundModem. Thomas has developed some utility programs that make this task easier. They are called smdiag and smmixer.

smdiag
provides two types of display, either an oscilloscope type display or an eye pattern type display.

smmixer
allows you to actually adjust the transmit and receive audio levels.

To start the smdiag utility in 'eye' mode for the SoundModem device sm0 you would use:

```
# smdiag -i sm0 -e
```

To start the smmixer utility for the SoundModem device sm0 you would use:

```
# smmixer -i sm0
```

18.4.5. Configuring the Kernel AX.25 to use the SoundModem

The SoundModem driver creates standard network devices that the AX.25 Kernel code can use. Configuration is much the same as that for a PI or PacketTwin card.

The first step is to configure the device with an AX.25 callsign. The axparms utility is used to perform this.

```
# axparms -setcall sm0 vk2ktj-4
```

will assign the SoundModem device sm0 the AX.25 callsign VK2KTJ-4.

The next step is to create an entry in the /etc/ax25/axports file as you would for any other device. The entry in the axports file is associated with the network device you've configured by the callsign you configure. The entry in the axports file that has the callsign that you configured the SoundModem device with is the one that will be used to refer to it.

You may then treat the new AX.25 device as you would any other, configure it for tcp/ip, add it to ax25d and run NetRom or Rose over it as you please.

18.5. Run time configurable parameters

The 2.1.* kernels have a new feature that allows you to change many previously unchangable parameters at run time. If you take a careful look at the /proc/sys/net/ directory structure you will see many files with useful names that describe various parameters for the network configuration. The files in the /proc/sys/net/ax25/ directory each represents one configured AX.25 port. The name of the file relates to the name of the port. The structure of the files is as follows:

```
No. Name Meaning Default
1 IP Default Mode 0=DG 1=VC 0
2 AX.25 Default Mode 0=Normal 1=Extended 0
3 Allow Vanilla Connects 0=No 1=Yes 1
4 Backoff 0=Linear 1=Exponential 1
5 Connected Mode 0=No 1=Yes 1
6 Standard Window 1 <= N <= 7 2
7 Extended Window 1 <= N <= 63 32
8 T1 Timeout 1s <= N <= 30s 10s
9 T2 Timeout 1s <= N <= 20s 3s
10 T3 Timeout 0s <= N <= 3600s 300s
11 Idle Timeout 0m <= N 20m
12 N2 1 <= N <= 31 10
13 AX.25 Frame Length 1 <= N <= 512 256
14 Max Queue 1 <= N <= 20 2
15 Digipeater Mode 0=None 1=Inband 2=XBand 3=Both 3
```

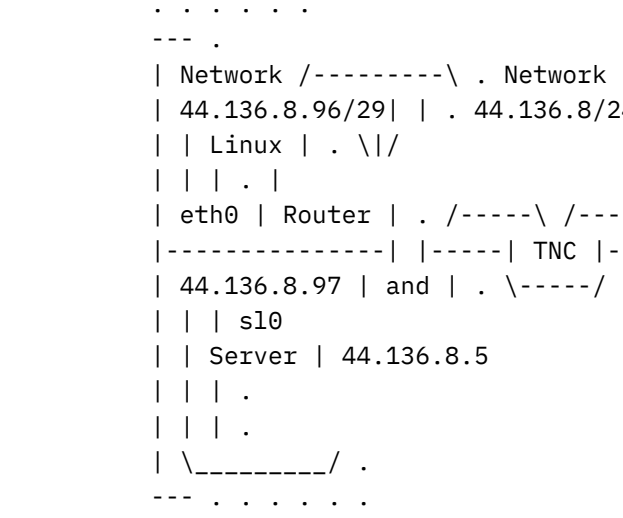
In the table T1, T2 and T3 are given in seconds, and the Idle Timeout is given in minutes. But please note that the values used in the sysctl interface are given in internal units where the time in seconds is multiplied by 10, this allows resolution down to 1/10 of a second. With timers that are allowed to be zero, eg T3 and Idle, a zero value indicates that the timer is disabled.

19. Some sample configurations.

Following are examples of the most common types of configurations. These are guides only as there are as many ways of configuring your network as there are networks to configure, but they may give you a start.

19.1. Small Ethernet LAN with Linux as a router to Radio LAN

Many of you may have small local area networks at home and want to connect the machines on that network to your local radio LAN. This is the type of configuration I use at home. I arranged to have a suitable block of addresses allocated to me that I could capture in a single route for convenience and I use these on my Ethernet LAN. Your local IP coordinator will assist you in doing this if you want to try it as well. The addresses for the Ethernet LAN form a subset of the radio LAN addresses. The following configuration is the actual one for my linux router on my network at home:



```
#!/bin/sh
# /etc/rc.net
# This configuration provides one KISS based AX.25 port and one
# Ethernet device.

echo "/etc/rc.net"
echo " Configuring:"

echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."

echo -n " ethernet:"
/sbin/ifconfig eth0 44.136.8.97 netmask 255.255.255.248 \
broadcast 44.136.8.103 up
/sbin/route add 44.136.8.97 eth0
/sbin/route add -net 44.136.8.96 netmask 255.255.255.248 eth0
echo " done."
```

```
echo -n " AX.25: "
axattach -i 44.136.8.5 -m 512 /dev/ttyS1 4800
ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.8.255
route add -host 44.136.8.5 sl0
route add -net 44.136.8.0 window 1024 sl0

echo -n " Netrom: "
nrattach -i 44.136.8.5 netrom

echo " Routing:"
/sbin/route add default gw 44.136.8.68 window 1024 sl0
echo " default route."
echo done.

# end

/etc/ax25/axports

# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz

/etc/ax25/nrports

# name callsign alias paclen description
netrom VK2KTJ-9 LINUX 235 Linux Switch Port

/etc/ax25/nrbroadcast

# ax25_name min_obs def_qual worst_qual verbose
4800 1 120 10 1
```

• You must have IP_FORWARDING enabled in your kernel.

• The AX.25 configuration files are pretty much those used as examples in the earlier sections, refer to those where necessary.

• I've chosen to use an IP address for my radio port that is not within my home network block. I needn't have done so, I could have easily used 44.136.8.97 for that port too.

• 44.136.8.68 is my local IPIP encapsulated gateway and hence is where I point my default route.

• Each of the machines on my Ethernet network have a route:

```
route add -net 44.0.0.0 netmask 255.0.0.0 \
gw 44.136.8.97 window 512 mss 512 eth0
```

The use of the mss and window parameters means that I can get optimum performance from both local Ethernet and radio based connections.

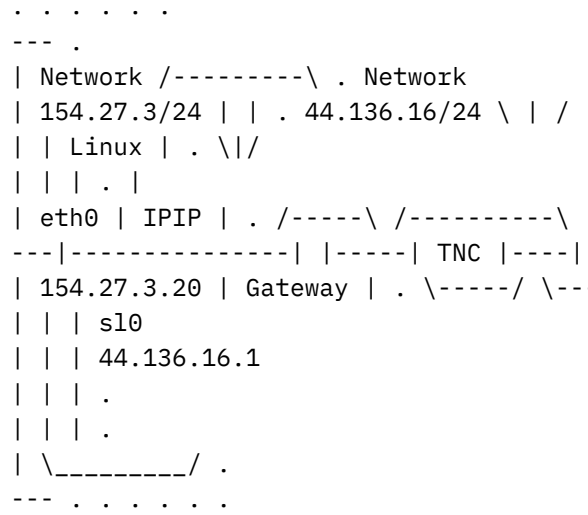
• I also run my smail, http, ftp and other daemons on the router machine so that it needs to be the only machine to provide others with facilities.

• The router machine is a lowly 386DX20 with a 20Mb harddrive and a very minimal linux configuration.

19.2. IPIP encapsulated gateway configuration.

Linux is now very commonly used for tcp/ip encapsulated gateways
around the world. The new tunnel driver supports multiple encapsulated
routes and makes the older ipip daemon obsolete.

A typical configuration would look similar to the following.



The configuration files of interest are:

```
# /etc/rc.net
# This file is a simple configuration that provides one KISS AX.25
# radio port, one Ethernet device, and utilises the kernel tunnel driver
# to perform the IPIP encapsulation/decapsulation
#
echo "/etc/rc.net"
echo " Configuring:"
#
echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."
#
echo -n " ethernet:"
/sbin/ifconfig eth0 154.27.3.20 netmask 255.255.255.0 \
broadcast 154.27.3.255 up
/sbin/route add 154.27.3.20 eth0
/sbin/route add -net 154.27.3.0 netmask 255.255.255.0 eth0
echo " done."
#
echo -n " AX.25: "
axattach -i 44.136.16.1 -m 512 /dev/ttyS1 4800
/sbin/ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.16.255
/sbin/route add -host 44.136.16.1 sl0
/sbin/route add -net 44.136.16.0 netmask 255.255.255.0 window 1024 sl0
#
echo -n " tunnel:"
```

```
/sbin/ifconfig tunl0 44.136.16.1 mtu 512 up
#
echo done.
#
echo -n "Routing ... "
source /etc/ipip.routes
echo done.
#
# end.
```

and:

```
# /etc/ipip.routes
# This file is generated using the munge script
#
/sbin/route add -net 44.134.8.0 netmask 255.255.255.0 tunl0 gw 134.43.26.1
/sbin/route add -net 44.34.9.0 netmask 255.255.255.0 tunl0 gw 174.84.6.17
/sbin/route add -net 44.13.28.0 netmask 255.255.255.0 tunl0 gw 212.37.126.3
...
...
...
```

/etc/ax25/axports

```
# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz
```

Some points to note here are:

• The new tunnel driver uses the gw field in the routing table in place of the pointopoint parameter to specify the address of the remote IPIP gateway. This is why it now supports multiple routes per interface.

• You can configure two network devices with the same address. In this example both the sl0 and the tunl0 devices have been configured with the IP address of the radio port. This is done so that the remote gateway sees the correct address from your gateway in encapsulated datagrams sent to it.

• The route commands used to specify the encapsulated routes can be automatically generated by a modified version of the munge script. This is included below. The route commands would then be written to a separate file and read in using the bash source /etc/ipip.routes command (assuming you called the file with the routing commands /etc/ipip.routes) as illustrated. The source file must be in the NOS route command format.

• Note the use of the window argument on the route command. Setting this parameter to an appropriate value improves the performance of your radio link.

The new tunnel-munge script:

```
#!/bin/sh
#
# From: Ron Atkinson <n8fow@hamgate.cc.wayne.edu>
#
# This script is basically the 'munge' script written by Bdale N3EUA
# for the IPIP daemon and is modified by Ron Atkinson N8FOW. It's
# purpose is to convert a KA9Q NOS format gateways route file
# (usually called 'encap.txt') into a Linux routing table format
# for the IP tunnel driver.
#
# Usage: Gateway file on stdin, Linux route format file on stdout.
# eg. tunnel-munge < encap.txt > ampr-routes
#
# NOTE: Before you use this script be sure to check or change the
# following items:
#
# 1) Change the 'Local routes' and 'Misc user routes' sections
# to routes that apply to your own area (remove mine please!)
# 2) On the fgrep line be sure to change the IP address to YOUR
# gateway Internet address. Failure to do so will cause serious
# routing loops.
# 3) The default interface name is 'tunl0'. Make sure this is
# correct for your system.

echo "#"
echo "# IP tunnel route table built by $LOGNAME on `date`"
echo "# by tunnel-munge script v960307."
echo "#"
echo "# Local routes"
echo "route add -net 44.xxx.xxx.xxx netmask 255.mmm.mmm.mmm dev sl0"
echo "#"
echo "# Misc user routes"

20. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio tcp/ip discussions), and you might also try the #linpeople channel on the linuxnet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

The linux-hams mailing list is archived at:

zone.pspt.fi <http://zone.pspt.fi/archive/linux-hams/> and
zone.oh7rba.ampr.org <http://zone.oh7rba.ampr.org/archive/linux-hams/>. Please use the archives when you are first starting, because many common questions are answered there.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which tcp/ip is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

21. Copyright.

- --- BEGIN Linux HAM HOWTO part 1/2 ---

Linux HAM HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telecom.com.au
v2.2, 10 October 1996

It is hoped that this document will assist Amateur Radio operators in
finding and trying the various amateur radio software that has been
written for or ported to Linux. It is also hoped that as a consequence
of this information being available that more amateur radio operators
will choose Linux as the platform of choice for their experimentation,
and that software developers will choose Linux as the platform for
their software development, further expanding the role of operating
systems like Linux in the Amateur Radio field.

1. Introduction.

This list was prompted by comments that had been expressed in the
various Linux newsgroups about the number of amateur radio operators
that were involved with Linux. It is now clear that Linux is becoming
a popular platform for Amateur Radio development work.

This list was originally called the RADIOLINUX list, but has been
moved into the Linux Documentation Project HOWTO collection, so it has
been renamed the HAM-HOWTO. I make no apologies for the name.

1.1. Changes from the previous version

Additions:
cw2hex - a program to assist in making keyer eproms

Corrections/Updates:
Fixed XNet web site details, ooops, thanks Carl.
Many minor smgl syntax fixes.

2. Where to obtain new versions of this document.
```

The Linux Documentation Project runs a Web Server and this document appears there as The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>.

Dennis Boylan N4ZMZ dennis@nanovx.atl.ga.us makes it available at the following three locations:

www.com <http://www.com/linux/radio/index.html>, www.hboc.com <http://www.hboc.com/linux/index.html> and www.lan.com <http://www.lan.com/linux/index.html>.

John Gotts N8QDW jgotts@engin.umich.edu makes it available at: www.engin.umich.edu <http://www-personal.engin.umich.edu/~jgotts/linuxhamsoft.html>.

Dan Todd dantodd@fusilli.ucdavis.edu makes it available at the following two locations: wheel.dcn.davis.ca <http://wheel.dcn.davis.ca/~dantodd/Linux/HAM-HOWTO.html>, and fusilli.ucdavis.edu <http://fusilli.ucdavis.edu/Linux/HAM-HOWTO.html>.

Alan Hargreaves VK2KVF alan@dap.CSIRO.AU makes it available in Australia at: www.dap.csiro.au <http://www.dap.csiro.au/RadioLinux>.

The Tuebingen Radio Club has it available from their home page at: DARC Home Page <http://www.neckar-alb.de/darc/welcome.html>

Please let me know if you'd like to make it available somewhere too. I'd like to see it on some Web Servers that are accessible from radio.

3. Satellite Software.

The following software is for use in experimentation with Satellite communication.

3.1. MicroSat Ground Station Software

Author
John Melton, G0ORX/N6LYT, g0orx@amsat.org and Jonathan Naylor G4KLX, g4klx@amsat.org

Description
Microsat Ground Station software.

Status
BETA. Version 0.9-Xaw released.

System requirements
Alan Cox's kernel based AX.25 support ver 1.1.12 or better. X-Windows. The programs make use of the Athena Widgets and look much better with the 3D libraries.

Detail
This software allows you to use of a KISS tnc to directly communicate with the Microsat series of satellites. It provides an Athena Widgets based X-Windows interface, and allows you a comprehensive range of means of interacting with the satellite.

The software should work with any window manager.

The software provides the following programs:

xpb:
broadcast monitor

xpg:
ftl0 file upload program, message upload program

xtlm:
telemetry display program

downloaded:
downloaded file list viewer

directory:
directory list viewer

message:
message preparation application

viewtext:
uncompressed ASCII text file viewer

viewlog:
display the contents of some log files

xweber:
special program for downloading webersat images

phs:
general purpose PACSAT header stripper
Where and How to obtain it.
John's software is available from: ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/microsat-0.9-Xaw.tar.gz>
or ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/satellite/pacsat/microsat-0.9-Xaw.tar.gz>.
Please check for new versions.

Licensing/Copyright
GNU Public License. Freely redistributable, No warranty.

John Melton, G0ORX/N6LYT, Alan Cox, GW4PTS, Jonathon Naylor,
G4KLX

3.2. SatTrack - Satellite tracking program

Name
SatTrack

Author
Manfred Bester, DL5KR, manfred@ssl.berkeley.edu, (510) 849-9922

Description
Satellite realtime tracking and orbit prediction program with
X11 color graphics.

Status
Version 3.1 has been released.

System requirements
A vt100 terminal and or X11 server. A Maths Coprocessor is
useful, but not essential, for good performance.

Detail
SatTrack is a satellite tracking program that has been written
in 'C' language on a UNIX workstation. It provides two different
live displays, for single or multiple satellites, and two
different orbit prediction facilities. Cursor controls used in
both live displays are compatible with the VT100 standard, which
allows the program to be run basically from any terminal. An
optional X Window graphics display shows the typical world map
tracking chart. The orbit prediction can be run either
interactively or in a batch mode. In the latter case all
necessary parameters are specified on the command line. The
program uses the NORAD/NASA two-line Keplerian element (TLE)
sets directly.

The current version of SatTrack can track a single satellite
and/or display multiple satellites for a single ground station.
It also can control suitable ground station hardware, like
antennas and radio equipment, and has an autotrack mode in which
it switches automatically between a number of specified
satellites. For calibration purposes tracking of the Sun and the
Moon are also provided. Future releases will provide more
options. SatTrack requires about 5 MB of disk space in the full
distribution with eight different world maps (2 styles, with 4
different sizes each, to fit everyone's screen and taste) and
less than 1.5 MB of memory at run time. More information can be
obtained from the SatTrack WWW Home Page
<http://www.primenet.com/~bester/sattrack.html>

Compiling the software under Linux is quite straightforward.
Manfred has designed the Makefile to compile the software
directly under your home directory, this is easy to change.
The steps I took were:

```
# cd /usr/src
# export HOME=/usr/src
# gzip -dc sattrack-3.1.1.tar.gz | tar xvf -
# cd SatTrack/src
# vi Makefile
{Comment SUN4 compile options}
{Uncomment the linux options}
{Select the options you want}
# make
```

Where and How to obtain it.
SatTrack can be found at: ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/sattrack-3.1.1.tar.gz>
or ftp.jvnc.net
<ftp://ftp.jvnc.net/priv/kupiec/sattrack/sattrack-3.1.1.tar.gz>
or the SatTrack WWW Home Page
<http://ssl.berkeley.edu/isi_www/sattrack-3.1.1.tar.gz>

Licensing/Copyright
The software is Copyright of Manfred Bester. It can be used without special permission for non-profit, non-commercial use. For commercial applications a license from the author is required.

Contributed by:
Manfred Bester, DL5KR

3.3. Predict

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A satellite orbital prediction program that also tracks the sun's position to predict visible satellite passes.

Status
Complete and working.

System requirements
predict is a screen-oriented program that utilizes the ncurses-1.8.5 (or later) library. A color terminal is a plus, but not a necessity.

Detail
Features of predict include azimuth and elevation headings of satellite passes, orbital phase, sub-satellite point locations, slant ranges, orbit numbers, and sunlight visibility as a function of date and time. The program is simple, fast, and easy to use. Predict maintains an orbital database for 21 satellites that can be updated by the user through the keyboard or by using files containing NASA 2-line orbital element data. Since this program operates under a multiuser environment, each user on the system owns and maintains his or her own unique orbital data base.

This program has been compiled using the highest level of compiler optimization for high speed execution, and uses an a.out binary format for greatest compatibility.

To install the package use the following:

```
# cd /
# tar xvfz predict.tgz
```

Where and How to obtain it.
You can obtain predict from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.4. UO11

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple UoSAT-OSCAR-11 satellite telemetry decoding program.

Status
Complete and working.

System requirements
A 1200 baud UoSAT-OSCAR-11 FSK demodulator (Bell-202 is
suitable), a VHF-FM receiver that can tune to 145.825 MHz, a
small yagi antenna, and a communications program such as Minicom
that can save 1200 baud ASCII telemetry data to a text file.

Detail
uo11 decodes ASCII telemetry data that has been captured through
a terminal program, error checks the received data, and applies
calibration equations to the received data to produce a report
that can be easily understood and analyzed. uo11 comes pre-
compiled (a.out format) with a man page entry for ease of use.

To install you should use the following commands:

cd /
tar xvfz uo11.tgz

Where and How to obtain it.
You can obtain uo11 from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.
Contributed by
John A. Magliacane, KD2BD

3.5. Dove

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple DOVE-OSCAR-17 satellite telemetry decoding program.

Status
Complete and working.

System requirements
A terminal node controller (TNC), a VHF-FM receiver that can
tune to 145.825 MHz, a small yagi antenna, and a communications
program such as Minicom that can save 1200 baud ASCII telemetry
data to a text file.

Detail
dove decodes ASCII telemetry data that has been captured through
a terminal program and applies calibration equations to the
received data to produce a report that can be easily understood
and analyzed. dove comes pre-compiled (a.out format) with a man
page entry for ease of use.

To install Dove you should use the following commands:

cd /
tar xvfz dove.tgz

Where and How to obtain it.
You can obtain Dove from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.6. Kepgen

Author
John A. Magliacane, KD2BD, kd2bd@amsat.org

Description
A simple, yet useful utility that generates Keplerian data files
in the NASA 2-line format from data entered through the
keyboard.

Status
Complete.

System requirements
kepgen is a screen-oriented program that utilizes the
ncurses-1.8.5 (or later) library. A color terminal is a plus,
but not a necessity.

Detail
kepgen allows the user to create checksummed Keplerian data
files in the NASA 2-line format using orbital data entered via

the keyboard. kepgen was created out of the need for generating
2-line orbital files from orbital data copied from WA3NAN audio
transmissions during Space Shuttle missions. The files created
can be read by virtually any satellite tracking or orbital
prediction program. kepgen comes pre-compiled (a.out format)
with a man page entry for ease of use.

To install kepgen you should use the following commands:

cd /
tar xvfz kepgen.tgz

Where and How to obtain it.
You can obtain kepgen from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

4. Shack Automation Software.

Software for simplifying tasks in the shack. Examples might include
software for controlling the newer breed of radios, logging programs,
QSL database, or antenna rotation.

4.1. FT-890 remote control

Author
Emarit Ranu, KG0CQ, drranu@holly.ColoState.EDU

Description
A simple program to control a Yaesu FT-890 transciever via its
CAT port from linux.

Status
Working

System requirements
Yaesu FT-890, Yaesu FIF-232C interface converter or homebuilt
equivalent (Feb 1993 "QST", page 37). Linux, serial cable.

Detail
The program is started with one parameter specifying the com
port to use. Once started the program is menu driven. Future
versions will support an X-Windows interface.

Where and How to obtain it.
The software is currently only available from the author by
email.
Licensing/Copyright
You may copy this program millions of times, the only

restrictions are:

- You may not charge ANYONE for the program itself.

- You may not distribute modified versions of the program.

- If you distribute the program, it MUST be the ORIGINAL tar file as received by the author. The README file has to be included.

Contributed by:
Emarit Ranu, KG0CQ

5. Packet Radio

Software for use in conjunction with, or for facilitating packet radio.

5.1. XNet

Author
Richard R. Parry, W9IF, rparry@qualcomm.com

Description
A traffic analyser for AX.25 networks.

Status
Stable, released.

System Requirements
TCL-7.5/Tk-4.1, KISS TNC.

Detail
The XNet software provides a variety of tools that an AX.25 lan manager could use to analyze and manage traffic. The tools present a graphical view of all of the traffic received at the monitoring node allowing the observer to easily see where the traffic flows normally and other information such as:

- Packet counts

- Node statistics

- Network Utilisation figures

The network is displayed with icons representing hosts and lines between them representing the traffic flow. The graphical display provides an instantly absorbable view of the traffic on the network being monitored. Richard has more information and sample displays at: www.qualcomm.com <http://www.qualcomm.com/~rparry/xnet.html>.

Where and how to obtain it
You can obtain the software from: www.qualcomm.com <http://www.qualcomm.com/~rparry/xnet/xnet-1.1.tar>

Licensing/Copyright etc.
XNET is a freeware program. It may be freely distributed.

Contributed by
Richard Parry, W9IF

5.2. monax25

Author
Skip Hansen, WB6YMH and Harold Price, NK6K.

Maintained by
Jonathon Naylor, jsn@cs.nott.ac.uk

Description
The monax25 provides a number of utilities for collecting
statistics on AX.25 channel usage.

Status
Version 1.1, Stable

System Requirements
KISS TNC.

Detail
The original ax25mon programs were written for MSDOS. This
package is a port of that software to Linux.

Where and how to obtain it
The `monax25' package may be obtained from: sunsite.unc.edu ham
applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/monax25-1.1.tar.gz>.

Licensing/Copyright etc.
Freely copyable, not GPL though.

5.3. splitscreen

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Split screen `ttylink' style program with scroll back and log to
file.

Status
Version 1.4.1, stable.

System Requirements
Requires the `ncurses' package.

Detail
The splitscreen is a unix implementation of the NOS ttylink
command. It provides a splitscreen display that makes user to
user chats much easier than the usual telnet interface. The
scroll back buffer and log to file features are useful when you

use the splitscreen program to access services like convers

Where and how to obtain it
The splitscreen package is available from: sunsite.unc.edu ham
applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/splitscreen-1.4.1.tar.gz>

Licensing/Copyright etc.
Public Domain

5.4. talk-ax25

Author
Dave Brown, N2RJT, dcb@vectorbd.com

Description
Berkeley `talk' client modified to support Linux AX.25

Status
working.

System Requirements
Requires the `ncurses' package.

Detail
The `talk-ax25' program is a modifed version of the conventional
Berkeley `talk' program to support Linux AX.25 operation.

Where and how to obtain it
The `talk-ax25' program is available from: sunsite.unc.edu ham
applications directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/talk-ax25-960426.tgz>
or from: ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/talk-
ax25-960426.tgz>.

Licensing/Copyright etc.
Berkeley style. Freely distributable, copyright messages must be
retained.

5.5. 7Plus for Linux

Author
Axel Bauda, DG1BBQ, DG1BBQ@DB0CL.#HB.DEU.EU

Description
Uuencode-like file coder for BBS Send and Forward of binary
files.

System Requirements
none special

Detail
Provides the ability to 7Plus encode binary files to allow them
to be transmitted within AX.25 BBS messages.

Where and how to obtain it
The 7Plus encoder is available from: sunsite.unc.edu ham applications directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/7pl217sr.tgz>.

Licensing/Copyright etc.
Hamware - Free for use by amateur radio use.

5.6. TNOS

Author
Brian A. Lantz, brian@lantz.com

Description
TNOS is a NOS derivative that is being actively supported and which is available for both DOS and Linux. It features enhancements not found in other NOS versions.

Status
The current version is 2.0 and is stable.

System Requirements
Kernel networking slip support if you want to link the normal Linux network facilities with TNOS. A kiss tnc.

Detail
Brian maintains a World Wide Web server which contains up to date information on TNOS, you can find it at www.lantz.com <http://www.lantz.com/tnos/tnos.html>.

Where and how to obtain it
The current version of TNOS is always available from: ftp.lantz.com <ftp://ftp.lantz.com/tnos/current/linux/>, sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/tnos/>.

Licensing/Copyright etc.
Free for use by amateur radio operators and educational oraganisations

5.7. N0ARY Packet BBS for UN*X

Author
Bob Arasmith, N0ARY, ported to Linux (and others) by Bob Proulx, KF0UW, rwp@fc.hp.com

Description
A packet bbs implemented under UN*X.

Status
ALPHA. Bob is running version ARY-0.9 on both Linux and HP-UX. The next version from N0ARY which is called 4.0 is in alpha test/development release. Bob has not been able to bring this online yet and is still running 0.9+kf0uw mods. Bob has about half it working with Alan Cox's AX.25 kernel which would be the

desirable combination.

System Requirements.
Linux installation, C Compiler, plus HAM radio TNC hardware.

Detail
This bbs has an excellent packet user interface. It has a compatible set of commands with the RLI bbs so users will be familiar with it immediately. It then extends the command set to be a very nice natural language style interface (e.g "list at allus about KPC-3"). Many csh style bang commands are supported. Also included is a mail interface to provide a packet to internet gateway.

Currently you need to customize the source code for your installation so you need some C programming proficiency.

Where and How to obtain it.
For a Linux version or for Linux information send mail to rwp@fc.hp.com. For a SunOS version contact bob@arasmith.com. This code is not packaged for distribution yet since it is not past the alpha stage of development.

Licensing/Copyright
Copyright by Bob Arasmith, N0ARY, but freely redistributable.

Contributed by:
Bob Proulx, KF0UW

5.8. LBBS - Linux BBS message gateway

Author
Daryl L Miles, G7LED, dlm@frink.demon.co.uk

Description
A BBS package designed to operate with either the native AX.25 kernel code or with the Wampes package.

Status
In development, working.

System requirements
Kernel AX.25 support or the Wampes package. sendmail, CNEWS.

Detail
Daryl's aim was to build a platform on which amateurs could build a Packet BBS to smtp gateway for Linux. I'm not sure what the current status is as the last version I could find was dated 30 Jun 1995. The latest binary version supports:

- MBL, FBB batching, FBB compressed, FBB type 1 compressed forwarding with restart facility implemented, deferring, and rejection.

• various Linux transport mechanisms including TCP kernel, AX.25 kernel, Wampes NetROM, AX25 or TCP.

• Simple dialer, to allow connections through AX.25 or NetROM nodes.

• White Pages

• Transient handling of type A (ACK messages).

• SMTP/NNTP<>BBS gatewaying implemented heavily to the extent that the user front end will be accessing the NetNews spool to retrieve articles.

• Message filter mechanism

• Field swapping (like SWAPP.SYS in FBB).

• Multiuser/connect.

To install, I did the following:

```
# cd /usr/src
# mkdir LBBS
# tar xvfz LBBS-0.1.6A.tar.gz
# cd LBBS
# ./Install.sh
```

This created a /usr/lbbs directory. The README.Setup file suggest an order in which to configure the BBS.

Where and How to obtain it.
You can obtain LBBS from: G7PIT's ftp site <ftp://rsl_pc3.ion.le.ac.uk/pub/LBBS>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright
Freely distributable for any non-commercial Amateur Radio use only. No warranty. Will be changed to GPL when software is stable.

5.9. MBL/RLI message to NNTP and email converter.

Author
SM0OHI, pme@it.kth.se

Description
Software that will convert incoming MBL/RLI messages into either NNTP or RFC-822 formatted mail messages.

Status
Development, not yet released.

System requirements
Unknown.

Detail
This software would be ideally suited to those who want to establish a mail and news gateway between conventional tcp/ip networks and the amateur radio mail network.

Where and How to obtain it.
Not yet availale.

Licensing/Copyright
Unknown.

Contributed by:
SM0OHI

5.10. Packet Cluster Node software

Author
Franta Bendl, DJ0ZY, and Bernhard ("Ben") Buettner, DL6RAI, root@dl6rai.muc.de

Description
A PacketCluster like system running on Linux.

Status
Released in October 1995.

System Requirements
Linux Kernel version 1.2.0 or greater with Alan Cox's AX.25 version 025 driver, TCP/IP networking, SysV IPC. Also needs Perl and KISS TNC hardware on serial device.

Detail
PacketCluster nodes have been available for about six years. The original software was written by Dick Newell, AK1A, and is running under DOS. clx is a system which clones a PacketCluster node. To the outside user commands and features are mostly identical, remote PacketCluster nodes, which can be networked, don't see the difference between a generic PacketCluster node and clx. So it fits well into an established network of PacketCluster nodes.

clx is not a user application, it is network node software. As such it is not of much use for the individual amateur. SysOPs of PacketCluster nodes with some experience on both PacketCluster and Linux will find this application interesting.

Here are some of the features of CLX:

- It is fully compatible with the internal PCxx protocol and from a users' point of view. It allows multitasking and different priorities for different things.

- The software detects looping DX spots without generating endless messages. clx filters out such duplicate information. We have implemented a concept which allows us to connect the network at

multiple points, which would formerly have been called a "Cluster Loop". clx knows of so-called "active" and "passive" links. The outcome is that more DX information is seen by clx.

• An interface to call your external programs (even dialog programs).

• clx uses modern programming concepts like shared memory for common data, lex & yacc to implement command language, shared libraries to keep binaries small (this is still on our wish list), remote procedure calls for inter process communication. It is strictly modularized with its own dedicated process for every major task.

• Comprises the following modules:

```
con_ctl
interfaces AX.25 kernel code and provides a socket for local
users.

rcv_ctl
manages receive spooling.

snd_ctl
manages transmit spooling.

rm_disp
receive message dispatcher, forwards messages to other
processes.

usr_req
user database requests, forks a process for every database
task to make it run in the background. The background process
later sends the results directly to send_ctl.

mb_ctl
mailbox control. The mailbox keeps messages in a file system,
header information is stored in the database.

usr_ctl
user administration (logins, logouts, logbook).

usc_mng
manages external user commands and command extensions.

iu_com
inter user communication (talk, conference).

send_ctl
transmit spooling, handling priorities.

icl_com
inter node communication (processing and generating PCxx
messages).
```

clx_ctl
system administration, installing shared memory pages.

int_com
manages internal program communications.

• The following is the only application program which can be run on the console:

loc_usr
allows console operator(s) to log in like a normal user.

Future enhance planned are:

• A console monitor to watch ongoing activities

• Speed optimization

• An internal clx protocol

• An additional command shell for experienced users

Where and How to obtain it:
ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/Linux/cluster>

There are five files that make up the package:

• 00Index

• clx_200.tgz

• install.clx

• README

Licensing/Copyright
clx (c) by Franta Bendl (DJ0ZY) and is available for non-commercial use, but the authors want to keep track of who is using their product, so before you can actually use the software you have to ask for an encrypted callsign string to be placed in the configuration file. You must send mail to <clx_us@dl6rai.muc.de> to organise this.

Contributed by:
Bernhard ("Ben") Buettner, DL6RAI

5.11. DPTNT Terminal and DPBOX BBS package.

Author
Mark Wahl, DL4YBG, DL4YBG@DB0GR.#BLN.DEU.EU, wahlm@berlin.snafu.de and Joachim Schurig, DL8HBS, DL8HBS@DB0GR.#BLN.DEU.EU, h0187akk@rz.hu-berlin.de
Description
A suite of programs that provide BBS and Terminal programs for Linux.

Status
Stable and working.

System requirements
TNC supporting WA8DED hostmode or KISS protocols.

Detail
TNT is a full featured hostmode terminal program. Compiling it on Linux is as difficult as untarring the source and typing `make'. It provides both a `dumb' terminal and X11 version. It comes with some comprehensive documentation which describes its features in some detail. Its main features are:

Multiple sessions:
TNT supports multiple packet radio connections on virtual screens that you can switch between. Each session window provides split screen (seperate transmit and receive text) operation with a status line. Commands can be entered in either a command session, or in any terminal session using a command key. Each of the virtual screens can be larger than the physical screen and can be scrolled around.

Data capture, file transfer and logging:
A number of options are available for logging received text to files. You can log transmit, receive or both to a log file. You can overwrite or append received data to existing files. You can use the `autobin' protocol to transmit or receive binary files.

Remote Shell operation:
You can provide a shell to remote users so that they can access other programs on your computer. You can also run a program and direct its input/output to a channel so that users can use it.

Redirection of devices to a channel:
TNT allows you to redirect input/output from a channel to a device, a modem for example.

Umlaut conversion:
TNT provides umlaut conversion if necessary.

Remote mode:
Remote users can issue command themselves if allowed to do so.

Socket mode:
You can configure tnt so that it opens a socket for users to telnet to that allows them operation just as you have from the console. This is useful where your linux machine is on an ethernet and you want other terminal on the net to have use of your radio.

DPBOX is a full featured BBS supporting the following features:

- F6FBB, W0RLI, TheBox style forwarding protocols.
- 8-bit transparent handling of messages using AutoBIN protocol.
- BBS data compressed to save space on disk, forwarding and downloading.
- "Live message capture" off BBS frequency, saves network traffic.
- PACSAT style bulletin broadcast transmitter and receiver.
- up to 200 simultaneous users.

Where and How to obtain it.
TNT by itself is available by anonymous ftp from: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/tntsrc09.tgz>. The DPTNT package may be found at: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/dptnt/>, or ftp.tapr.org <ftp://ftp.tapr.org/pub/tapr/software_lib/Linux/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/>.

The Home Pages of the developers are at: DL4YBG <http://www.snafu.de/~wahlm/> and DL8HBS <http://hppool0.rz.hu-berlin.de/~h0187akk/>

Licensing/Copyright
The TNT and DPBOXT programs are covered by the GNU Public License. The TFKISS program is covered by ALAS (a german license for Amateur Radio use), and the DPBOX program is freely distributable for Amateur Radio use.

5.12. IPIP encapsulation daemon.

Name
Mike Westerhof's IPIP encapsulation daemon.

Author
Mike Westerhof KA9WSB (original code), then Bdale Garbee N3EUA (port to BSD), then Ron Atkinson N8FOW and John Paul Morrison (port to Linux), then Bdale rolled it all back together again.

Description
A daemon that will allow you to use your linux machine as an IPIP encapsulating gateway.

Status
Ron is running this code himself, and the other version have been run quite successfully.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
If you've ever used an internet gateway from your amateur packet radio you have probably been connected by an encapsulation

gateway of some descpription. Most run KA9Q's NOS and DOS, but others run Unix and this daemon. It allows you to encapsulate IP within IP, so that you can 'tunnel' IP connections over the Internet. The software allows you to connect a KISS TNC to your linux machine and to have all datagrams received on it carried across the Internet to a similar gateway. Bdale has installation instructions in the package.

Where and How to obtain it.
This software is available from the col.hp.com <ftp:///col.hp.com/hamradio/packet/etc/ipip/ipip.tar.gz> ftp site.

Licensing/Copyright etc.
Freely distributable, though Bdale asks that if you use the code and like it you might send him a QSL card or a postcard.

Contributed by:
Ron Atkinson, N8FOW, and Bdale Garbee, N3EUA

Note:
You may want to consider using kernel based tunnel daemon now instead.

5.13. AXIP encapsulation daemon.

Name
Mike Westerhof's AXIP encapsulation daemon.

Author
Mike Westerhof KA9WSB, ported to Linux by Ron Atkinson N8FOW.

Description
A daemon that will allow you to use your linux machine as an AXIP encapsul ating gateway.

Status
Not properly tested, but assumed to work ok.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
This daemon is the partner to the IPIP encapsulation daemon. It allows you to encapsulate AX.25 frames in IP to carry them across the Internet. This is useful for linking AX.25 networks in remote areas. Ron has supplied a Makefile for linux, and with it the software compiled without errors on my system running a recent version kernel. Ron has also written some README files which give you the detail necessary to compile the system and the original documentation describes how to configure it.

Where and How to obtain it.
This software is available in the sunsite.unc.edu ham apps

directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ax25ip.tar.gz>.

Licensing/Copyright etc.
Freely distributable so long as the original copyright notice is not removed.

Contributed by:
Ron Atkinson, N8FOW

5.14. Ping-Pong Convers Server

Name
Fred Baumgartens Convers Server for Linux.

Author
Fred Baumgarten, DC6IQ, dc6iq@insu1.etec.uni-karlsruhe.de

Description
This is a version of the convers server that allows multiple users to simultaneously chat with each other in a round-table style conversation. It is compatible with the NOS convers servers, but provides extra facilities such as saving/restoring of Personal Text and Chanel Topics.

Status
In use of a number of popular convers servers, appears very stable.

System requirements.
Linux, GNU make, C compiler.

Detail.
Complete installation instructions are included in the INSTALL file that is included in the distribution.

Where and How to obtain it.
A distribution of this software is available at sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/convers/>. The home of the software is at insu1.etec.uni-karlsruhe.de ftp server <ftp://insu1.etec.uni-karlsruhe.de/pub/hamradio/convers/convers>

Licensing/Copyright etc.
Presumably copyright Fred Baumgarten (not specifically stated), but some portions appear to be free for non-commercial use and copying provided the copyright notices stay intact.

5.15. RSPF Daemon

Name
RSPF - Radio Shortest Path First routing daemon for Linux

Author
Craig Small vk2xlz csmall@triode.apana.org.au

Description
An implementation of the Radio Shortest path First routing protocol for linux. The daemon supports version 2.2 of the protocol which corrects a lot of bugs and problems that were present in version 2.1.

Status
Alpha - running, needs testing and bug reports. Current version is 0.05

System requirements.
Requires Alan Cox's kernel based AX.25 code.

Detail
This program will allow Linux to become an RSPF router. It addresses some of the quirks of RSPF v2.1, the version in NOS which means that it is incompatible with the NOS version. It will also allows remote/local queries via a tcp session for debugging and diagnostic purposes.

Where and How to obtain it.
Current versions are always available from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming> or from the author.

Licensing/Copyright
GNU Public License vers 2.0

Contributed by:
Craig Small, VK2XLZ

5.16. Michael Westfall's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Michael Westfall, N6KUY, mwestfal@.csci.csusb.edu

Description
A split screen terminal program that listens on the ttylink port and accepts incoming connection requests.

Status
Seems to work fine.

System requirements
none special.

Detail
This is a standalone program that does require you to change the configuration of your system at all. If you have root access on your machine then you run the program in a VT or in an XTerm and it will clear the screen and wait for an incoming connection on

port 87 (ttylink). When a connection is received it will provide
you with a split screen display with which to communicate with
the calling person.

Where and How to obtain it.
You can obtain ttylinkd from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ttylinkd.tgz> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/ttylinkd.tgz>.

Licensing/Copyright
Unknown, presumed freely distributable.

5.17. Craig Small's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Craig Small, VK2XLZ, csmall@triode.apana.org.au

Description
A daemon to accept a ttylink (port 87) tcp/ip connection and
convert it into a talk request for a user on the host machine.
This may also be configured for use with the ax25d program so
that AX.25 users may also make use of it to connect to you.

Status
Alpha, but working.

System requirements.
Kernel networking support with AX.25 support if desired.

Detail
Because the talk protocol is a non-standard, that is it isn't
actually defined anywhere (except the source), the ttylink
protocol from NOS has become the defacto standard, at least for
amateurs, to provide keyboard to keyboard communication over
tcp/ip. This daemon fills the need for something to answer
ttylink requests to linux machines.

To build and install the software, I did:

```
# cd /usr/src
# tar xvfz ttylinkd-0.02.tar.gz
# cd ttylinkd-0.02
<edited the Makefile to change the SYSOP_USER>
# make
# cp ttylink /usr/sbin
<edited /etc/service, /etc/inetd.conf as instructed in README>
# killall -1 inetd
```

Where and How to obtain it.
You can obtain the latest version of ttylinkd from:

sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming>.

Licensing/Copyright
GNU Public License vers 2.0

6. Morse Code

Software for use in conjunction with, or for facilitating Morse
communication.

6.1. cw2hex

Author
G. Forrest Cook, WB0RIO, cook@stout.atd.ucar.edu

Description
cw2hex converts ascii text into Hex files for making keyer
EPROMS.

Status
version 1.1 is tested and ready to go.

System requirements
standalone textual program, requires gcc to compile

Detail
This program takes a textual input and converts it to morse
encoded characters in the form of a standard Intel HEX file. The
Hex file can be used to program an EPROM which can then be
connected to a simple circuit that generates canned messages.
Possible uses are CW calling machines and CW beacon transmitter
keyers. There is an accompanying schematic for a keyer circuit
that works with this software.

Where and How to obtain it.
You can obtain cw2hex from www.atd.ucar.edu
<http://www.atd.ucar.edu/homes/cook/software.html>

Licensing/Copyright
GNU Copyleft

Contributed by:
G. Forrest Cook, WB0RIO

6.2. SoundCard CW

Author
Steve Merrifield, VK3ESM, sjm@ee.latrobe.edu.au

Description
Morse Code practice for Linux, using a soundcard

Status
Completed

System requirements
Linux supported soundcard with FM support.

Detail
This program generates morse code characters using the
soundcard. It does not rely on the Linux virtual console sound
features and may therefore be used either with X11 or from a
virtual console. Its features include:

- adjustable frequency
- adjustable volume
- adjustable speed
- adjustable delay
- adjustable group count
- generation of random groups
- able to decode and play text files

Where and How to obtain it.
The software may be obtained from its home site at:
livewire.ee.latrobe.edu.au
<http://livewire.ee.latrobe.edu.au/~sjm/morse>.

Copyright/Licensing
Berkeley style copyright. The software may be freely used so
long as credit is given to the original author.

Contributed by:
Steve Merrifield, VK3ESM

6.3. GW4PTS Morse trainer.

Author
Alan Cox, GW4PTS, alan@lxorguk.ukuu.org.uk

Description
A Morse Code trainer that uses the PC internal speaker

Status
stable, works quite well, unfinished.
System requirements
Linux, any version

Detail
Alan wrote this small program in only an hour. It is quite neat,
and allows you to play morse at a range of speeds and
frequencies through the PC internal speaker. You can specify the
text to be played either from the command line, from a file, or

the program is capable of generating random character groups. As it stands you must invoke the program from a Linux Virtual Console, as it relies on certain kernel calls to produce the sound, and these don't work as easily from an XTerm. As it sounds each character it lists the character in verbal form (Di, Dit, Dah etc.) to the screen. Alan is hoping that someone will take the code and enhance it with the features he has listed in the comments at the head of the source file.

Where and How to obtain it.
I've had a large number of responses from people seeking this code, so I've obtained Alan's permission to make it available. You can obtain it from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/GW4PTS.morse.tar.gz>.

Copyright/Licensing
GNU Public License 2, freely redistributable, no warranty.

6.4. morse (aka superiormorse)

Author
Joe Dellinger, joe@sep.stanford.edu, jdellinger@trc.amoco.com, joe@soest.hawaii.edu

Description
A morse-code practice program for UNIX workstations.

Status
Quite stable

System Requirements
Currently supports X11, Sun4, HP, Indigo, and Linux

Detail
Lots of features and options. Includes a utility for generating random content QSOs, similar to those used in the FCC exams.

Where and How to obtain it:
morse can be obtained from: sepftp.standford.edu <ftp://sepftp.stanford.edu/pub/UNIX_utils/morse/morse.tar.gz>.

Licensing/Copyright
Freely Redistributable

Contributed by:
Brian Suggs, AC6GV, and John Gotts

7. AMTOR Software.

Software for use in conjunction with, or for facilitating AMTOR.

8. PACTOR Software.

Software for use in conjunction with, or for facilitating PACTOR.

9. Slow Scan Television Software.

Software for use in conjunction with, or for facilitating Slow Scan Television.

10. Facsimile Software.

Software for use in conjunction with, or for facilitating Facsimile.

11. Design and Construction Software.

Software to assist in the design and construction of amateur radio related things. Antenna, Circuit Board, Filter, and QSL card design packages are all good candidates for this section.

11.1. oscope - Enhanced Software Oscillosope

Author
Tim Witham, twitham@pcocd2.intel.com

Description
`oscope' is a digital 44kHz oscilloscope for /dev/dsp. It is based on Jeff Tranter's original work described below but has been significantly enhanced.

Status
First production release.

System requirements
Requires a kernel supported sound card that can do 8800Hz - 44kHz, the `libsx' package to build the xoscope X11 client, the `svgalib' package to build console-based oscope, the `g3vga' package to add console text, and a mixing program to select input source and level.

Detail
Includes oscope for SVGA console display and xoscope, an X11 client. Features include 8-bit sampling of 2 channels at 44kHz, 5 us/div to 5 ms/div time scale, 5 automatic measurements, built-in and external math functions including sum, diff, avg, and FFT, 26 memory buffers, 8 simultaneous signal displays, and file save/load.

Where and How to obtain it.
The oscope package may be obtained from either sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/oscope-1.0.tar.gz> or from its home site at: www.bobsplace.com <http://www.bobsplace.com/~twitham/>.

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

Contributed by:
Tim Witham

11.2. Software Oscilloscope

Author
Jeff Tranter, Jeff_Tranter@Mitel.COM

Description
Scope is a simple software emulation of an oscilloscope. It graphically displays voltage as a function of time.

Status
ALPHA. First release.

System requirements
Sound card with input capability supported by the kernel sound driver. SVGALIB is used to do the display work.

Detail
Scope uses the /dev/dsp device to take audio in from the soundcard and displays it on the screen in a manner similar to an oscilloscope. Jeff claims Scope was written more for amusement value than for any serious purpose.

Where and How to obtain it.
You can obtain source, makefile and man page for Scope from:
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/scope-0.1.tar.gz>

Licensing/Copyright

- --- BEGIN Linux HAM HOWTO part 2/2 ---

Author
Thomas Nau, Thomas.Nau@rz.uni-ulm.de

Description
An X11 based interactive printed circuit board design tool.

Status
Vers 1.4.1, stable.

System requirements
X11 Windowing system and a recent flex program.

Detail
The pcb package comes with good instructions on how to compile
and install the software. I compiled it without error under
X11R6. It comes with package layouts for a range of popular
components and the example layout nicely demonstrates the
capabilities of the package.

Where and How to obtain it.
You can obtain the pcb package from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/pcb-1.4.1.tar.gz>
or from: ftp.uni-ulm.de <ftp://ftp.uni-ulm.de/pub/pcb/current>

Licensing/Copyright
GNU Public License

11.4. Chipmunk circuit design and simulation tool

Author
Dave Gillespie daveg@synaptics.com and John Lazzaro
lazzaro@cs.berkeley.edu

Description
Schematic Entry and Digital or Analog Simulation.

Status
vers 5.10, stable.

System requirements
X11 windowing system and older (XFree86-2.x) libs, 8 bpp (256 color) only

Detail
I haven't tried this one out yet.

Where and How to obtain it.
You can obtain the Chipmunk package from its home site at www.pcmp.caltech.edu <http://www.pcmp.caltech.edu/chipmunk/>.

Licensing/Copyright
Modified GNU Public License, Caltech specifically disclaimed from liability.

11.5. irsim

Author
Dmitry Teytelman, dim@leland.stanford.edu

Description
An event-driven logic-level simulator for MOS circuits

Status
Version 9.2, production.

System Requirements
X-Windows.

Detail
irsim is an X11 based simulator for MOS circuits. It has two simulation modes, either switch where each transistor is modelled as a voltage controlled switch, or linear where each transistor is modelled as a resistor in series with a voltage controlled switch, and each node has a capacitance.

Where and How to obtain it.
You can obtain irsim from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/irsim-9.2.linux.1.tar.gz>.

Licensing/Copyright
Freely Redistributable

11.6. Spice vers. 3f4

Author
University of California, Berkeley, port by Jeff@RyeHam.EE.Ryerson.Ca

Description
Spice is an analog circuit emulator.

Status
Stable release.

System requirements
Unknown.

Detail
Spice allows you to design and test circuits in a computer modelled environment to see how they will behave without having to touch a soldering iron, or solder. A readme file comes with the package. To install I did the following:

```
# cd /usr/src
# gzip -dc spice3f4.tar.gz | tar xvf -
# cd spice3f4
# ./utils/build linux
# ./utils/build linux install
```

Where and How to obtain it.
You can obtain version 3f4 of Spice from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/spice3f4.tar.gz>

Licensing/Copyright
Copyright held by University California, Berkeley. Freely redistributable provided you are not unfriendly to the U.S.

11.7. svgafft - Spectrum analyser

Author
Andrew Veliath, veliaa@rpi.edu

Description
svgafft is a spectrum analyser for Linux.

Status
Alpha, but usable.

System requirements
F77, Linux supported sound card, svgalib, a 486DX33 or better.

Detail
svgafft uses the /dev/dsp device and currently supports 16-bit and 8-bit sample resolution on supported Linux soundcards. It's display is something akin to a high-end spectrum analyzer with falling peaks. Andrew is working on an X-Motif version to be released soon.

Where and How to obtain it:
You can find the software at tsx-11.mit.edu <ftp://tsx-11.mit.edu/pub/linux/ALPHA/svgafft/svgafft-0.2h.tar.gz> and sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/svgafft-0.2h.tar.gz>.

Licensing/Copyright
GNU Public License.

Contributed by:
Andrew Veliath

11.8. Audio Spectrum Analyser

Author
Philip VanBaren, phillipv@eecs.umich.edu

Description
An audio spectrum analyser for Linux SVGALIB or X-Windows.

Status
Alpha but usable

System requirements
Linux supported sound card, svgalib or X-Windows.

Detail
freq5a1 uses the /dev/dsp device, samples the incoming audio,
performs a fast fourier transform on the data and displays the
output in either 640x480 VGA or an X-Window.

Where and How to obtain it:
You can obtain freq5a1.tar.gz from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/sound/freq5a1.tar.gz> or
by mail from the author.

Licensing/Copyright
GNU Public License vers 2.0.

11.9. ObjectProDSP

Author
Paul Budnik, Mountain Math Software, support@mtnmath.com

Description
ObjectProDSP is an object oriented tool for design, development
and implementation of Digital Signal Processing. It allows you
to design your DSP network, runs simulations with oscilloscope
style plots and listings at any point in the network.

Status
alpha.

System requirements
XFree86 3.1.1 or better, g++ from gcc 2.6.3 or better, 32Mb of
total memory (real+swap) recommended, 6Mb of disk space for
minimum configuration, 40Mb disk for full installation.

Detail
There are a number of files that comprise the package. There is
a binary only package for Linux which I recommend you start
with. There is comprehensive documentation included from which
you can obtain installation and operation instructions.

Where and How to obtain it.
You can obtain ObjectProDSP from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/devel/opd>, tsx-11.mit.edu
<ftp://tsx-11.mit.edu/pub/linux/packages/dsp>, or ftp.funet.fi
<ftp://ftp.funet.fi/pub/OS/Linux/util/electronics/opd>. There
are a number of files that comprise the package, some of the
quite large so be prepared.
Licensing/Copyright
GNU Public License vers 2.0., Commercial licensing available.

12. Training/Educational Software.

Software to assist in education or training for amateur radio. Morse
Code tutorials, technical examination database, Computer Based
Training software, and the like are listed here.

13. Miscellaneous Software.

Software that didn't neatly fit into any other category.

13.1. Linux for HAMS CD-ROM

Author
Bruce Perens, bruce@pixar.com

Description
A complete linux distribution on CDROM specifically designed for
Amateur Radio operators.

Status
Not yet available.

System requirements.
Linux compatible hardware, some software will obviously require
specialised hardware to operate. No additional software should
be required.

Detail
A complete Linux distribution specifically catering for Amateur
Radio operators. It will include a fully featured Linux
installationplus a range of amateur radio specific software such
as those listed in this document. Bruce has detail and updated
status report available at the LinuxForHams WWW page
<http://www.rahul.net/perens/LinuxForHams>.

Where and how to obtain it:
It isn't yet available, details will be made available when it
is released.

Licensing/Copyright
GNU Public License.

Contributed by:
Bruce Perens

13.2. SunClock

Author
John Mackin, john@cs.su.oz.AU

Description
A clock that will show you instantly what parts of the globe are exposed by sunlight and what parts aren't.

Status
Released.

System requirements.
X-Windows.

Detail
sunclock is another of those desktop gadgets that most people think look nice but really don't have a lot of use for. I use sunclock to obtain an at-a-glance indication of the time anywhere in the world. In its iconic form it sits in a small Mercator projection. When maximised it produces the same image but obviously larger with slightly more detail. It also displays the date, local time and UTC. sunclock actually calculates mathematically what parts of globe are sunlit and which aren't, it seems quite accurate, so long as you assume the earth has no atmosphere.

Where and How to obtain it.
I haven't seen any precompiled sunclock binaries for Linux about, so check your nearest archie server. sunclock compiled straight out of the box for me.

Licensing/Copyright
Public Domain and may be freely copied as long as the notices at the top of sunclock.c remain intact.

13.3. Xearth

Author
Kirk Johnson, tuna@cag.lcs.mit.edu

Description
A rotating earth for X-windows root window. It has real life shading, and options for geostatic view, and non geostatic view. A prettier and more modern version of sunclock but requires a bit more processing power.

Status
Version 1.0.

System requirements.
X-Windows.

Detail
xearth is a sophisticated program which draws a colour picture of the earth onto your X Windows display. It offers either an orthographic view as you would see from space or the map like

mercator projection. You have a number of options in determining
the behaviour of the view. The details are available from the
xearth Home Page <http://cag-www.lcs.mit.edu/~tuna/xearth/> and
in the documentation which is supplied with the package.

Where and How to obtain it.
The source can be obtained from its home site at cag.lcs.mit.edu
<ftp://cag.lcs.mit.edu/pub/tuna/> or just about any X11/contrib
directory.

Licensing/Copyright
Copyright (C) 1989, 1990, 1993 by Kirk Lauritz Johnson. The
copyright notice included states that xearth is freely
redistributable so long as the copyright notice is left intact,
and be included in documentation.

Contributed by:
Kirk Johnson

14. How to contribute or update an entry.

I'd like for this list to be as complete and up-to-date as possible.
So I'm keen to hear about any developments or products that I don't
already know about, or that the entry is obselete or outdated for.

What I'd like as a minimum set of requirement would be something like
the following:

Name
The name of the software in question.

Author
Who wrote, or ported the software. An email address, or some
other means of contacting them is also essential.

Description
A single line description of what the software does.

Status
An indication of the software's status. Is it still in testing?
Is it a production release? Is it still in the design stage?

System requirements
What does the software require to run? Does it require X-
Windows? Does it need a soundcard? Does it need a certain
version of kernel? Does it need other software to support it?

Detail
I'm not keen on including a large amount of detail on each piece
of software as this would consume a lot of time reading and
trying to keep up to date. So instead what I'd like to list is
what makes this software unique, anything special about it.
Perhaps its most outstanding features, that sort of thing.

Where and How to obtain it.
If the software is freely distributable then ftp details would be great. If it is commercial software then the name of the company distributing the software, and an address or telephone number. If it is available only by some other means, say mail order, then details on where and how to obtain it.

Licensing/Copyright
Is the software Copyleft? Copyright? Shareware? Public Domain? Restricted in use in any way?

Don't worry if you don't know all of these details, just send me what you do know and I'll list what I can. I'd rather have an incomplete listing than no listing at all.

Please mail any contributions to:

terry@perf.no.itg.telecom.com.au

I'd list a packet radio address too but I'm still not properly operational again yet after moving house.

15. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio tcp/ip discussions), and you might also try the #linpeople channel on the undernet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which tcp/ip is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

16. Copyright.

The HAM-HOWTO, an introduction to Amateur Radio software available for Linux and information on how to configure some of it. Copyright (c) 1995,1996 Terry Dawson.

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

Dear Friends,

Maha Communications is a rapid growing company, and we are looking for
sales specialist!

1. Sales Specialist
Speak Fluent English
Some technical background of two-way/ham radio
Willing to take the challenge
Speak/Write Spanish (OPTIONAL)

Our company production lines include: Battery Pack,
Speaker/microphone,
R.F. Amplifier, Antenna, and accessories. Please visit
http://www.maha-comm.com/ for detail information on our products.

We are located at Brea, Southern California, in Orange County. If you
are interested in this job, please send e-mail to sales@maha-comm.com

>is to make it more interesting, faster than phone data rates, etc.

(Hit your return key sooner, Carl)

"Computer-savy"? What's that mean? Turning on a computer, logging in, point-and-clicking with a mouse - none of that takes any skill at all. And with all the wonderful info now available, where do these kids go? They find their way to the games and pictures, but don't read the textual material because their reading ability is so poor.

You're giving today's kids too much credit - our colleges have to teach them subjects at a remedial-level before we can begin their real college education. And now there is a drive at many universities to weaken the traditional curriculum even more due to students' inability to master the material at a level that once was easily met with a fair amount of work.

The reason we don't see more kids becoming hams today might be their inability to fully understand the material they need to learn in order to pass the exams.

>the occasional ham experimenter ... (ham experimenter ... God,
>what a *novel* idea that must seem like to you, Jim ...)

Glass houses and rocks again. What equipment do you operate on the air that you've built yourself, Carl? (That must be the tenth time I've asked you that question.)

> ... ham radio operator attitudes and lack of modern
>skills are the major problems ...

The attitudes I hear on the air are fine. But you're right about the skill problem - too many of these VHF-only guys get their license just to yack - they're not builders at all (can you imagine *buying* a V/UHF antenna? Hahaha - what a riot! I'm shocked that commercially-built V/UHF antennas are even offered for sale.)

Jeff KH2PZ

So may apply, but please use plain, every day English and talk like you
would talk in person or on over the phone.

Q-signals are unnecessary. Q-signals were invented for brevity because
people were in a hurry or were paying for a service. We are not paying for
air time over the CB.

Please, every day ENGLISH is OK and preferred.

Cheers

Brian

If so, then perhaps the theory tests are not so dumbed-down as
some have claimed.

I think the real reason is that not many kids are interested in
what they have seen of ham radio. The overwhelming importance
placed on Morse Code by the ham establishment makes us look like
a bunch of old geezers. Is it any wonder that young people are
staying away in droves?

>(can you imagine *buying* a V/UHF antenna? Hahaha - what a riot! I'm
>shocked that commercially-built V/UHF antennas are even offered
>for sale.)

Any suggestions on where one can get the sort of aluminum and fiberglass
materials one would need to build them? Anything I put up has to withstand
a substantial amount of wind. I suspect the same is the case where you live.
I have built VHF antennas before, but have had trouble with them because the
readily available materials tend to bend and sag excessively.

Looking at some of the arrays that are used by some of the more serious
VHF and UHF'ers, I wonder how long it would take to build something like
that from scratch, and what tools one would need to do it.

A lot of people have pointed to the existance of store-bought HF dipoles
as evidence of the dumbing-down of the hobby. I bought one of those once --
in about 1963 -- I was about 11 and hadn't even started to study for my
Novice yet. The antenna was used for receiving then. I think there is a place
even for these.

My current HF antenna is a G5RV (not store-bought) hung between a pair of
redwood trees. I got the guy ropes into the trees with a bow and arrow.

Our kids' education has been dumbed down and so have the tests.
Compare today's exams to those of say, 30-40 years ago...

> I think the real reason is that not many kids are interested in

Strange. During field day it's always the code position that attracts
the most attention. The kids aren't so impressed with the computer
communications.

Kids opinions are formed from what they hear from adults. If you
were to rave about Morse communications they'd beat down the
door to learn it. If you run down Morse, they kick and scream
if they're "forced" to learn it.

You do what you can with the materials at hand. There's nothing magical
about store-bought items. You sit down with pad and pencil in a
comfortable sofa, stare into space, and let the ideas flow.

I am thinking about making a Amateur Radio CD-ROM filled with freeware and shareware IBM computer programs relating to Amateur Radio. The price would be between $12-$15. It is also a great opportunity for you to make money. You could buy many of them, and sell them easily for $20 each or more at Hamfests. For more information send e-mail to HamSoft@aol.com.

Thank you,

Jonathan

>you?

No matter what you state, your actual goal in such a case would be to
provide yourself with an ego trip where you could *control* the
opinions of others. You would NOT be providing a good, complete
service to the Amateur community.

>Burt you're nothing special and their is no reason that people should
>go out of their way to accomodate your BS. In my opinion PBBS ops who
>lock you out are providing a service to the community. When you get
>like you have been the past week or so you are insulting demeaning and
>a waste of bandwidth.

Going out of one's way to provide a forum for folks like Burt requires
the self-control and self-confidence that few people have. It's only
by providing a free marketplace of ideas that a consensus can be
reached. You do no service by forcing contrary views underground to
fester and grow in the dark. Shining the light of truth on them is far
better. People who indulge in lockouts do the Amateur community no
service, sir.

In article <5f7efl$da5@news.Hawaii.Edu>,
jeffreyh@Hawaii.Edu (Jeffrey Herman) wrote:
> MN Maniac <mnmaniac@aol.com> wrote:
> >Even the military has now largely abandoned Morse code. That should give
> >you a good idea of how relevant and useful the mode is in 1997.
>
> What happens in one service isn't always relevant to other services.

That's very true, but when the change is occurring in not just one service but in all services, other than amateur, then you have to pay attention. The rest of the communications world is switching, or already has switched, to superior digital transmission methods for text (and increasingly for voice as well).

> Hams dropped AM in the 60s and the FCC eliminated AM from the marine
> bands in the mid-70s, yet every nation world-wide is still using
> AM for its domestic and external ("shortwave") broadcasts.

That's true too, it's the curse of backward compatibility. The huge installed base of consumer AM receivers has kept AM alive far longer than is reasonable. But even that is changing. The change was slow at first, but is now gaining irresistable momentum. Competition from other services is driving domestic AM against the wall. Practically every issue of _Broadcasting_ lists another domestic AM station going dark. It took 25 years from the time the FCC mandated FM receiver availability in autos, but the superiority of FM has finally won out as the dominant audio broadcasting service, and AM is dying a lingering death. Since AM and FM don't share common spectrum, it wasn't necessary, as it was with spark, for the authorities to drive a stake through its heart. The marketplace was sufficient.

International SW broadcasting is also suffering. Some nations are shutting down or vastly scaling back their SW broadcasting activities. The pan-African plan to convert to DAB is proceeding on schedule. VOA has scaled back, and the Cold War propaganda stations of the Eastern bloc have mostly gone dark, RCI is going (or gone) dark, even the venerable BBC is divesting, downsizing, and privatizing. Radio Indonesia, and some other progressive operations, have gone to webcasting via Real Audio. Etc.

And of course that other primary user of AM, TV broadcast, has now entered the phase out period as it converts to digital transmission over the next 8 years. And just in the nick of time too, DBS is already eating into the domestic TV broadcast audience at a frightening rate. Digital holds a promise of salvation for AM Standard Broadcasters as well. An industry group is pushing a system called Compatible Digital for standard

AM broadcasting. It holds out the promise of delivering FM quality on the AM bands using a system which requires far less power, and notably the same spectrum, to deliver full stereo sound over a larger area. Some SW broadcasters are also looking at it with interest. Switiching from AM to CD may be the salvation of the Standard Broadcast and SW broadcast industries. (This is something for amateurs to be watching closely, because CD may renew pressure for more, and exclusive, SWBC spectrum at HF.)

Thanks to the VLSI revolution, resistance to change because of a large installed base of obsolete equipment is viewed as less of a problem today than in the past. People appear willing to scrap their obsolescent systems if the newer systems are both better and not much more expensive (or even less expensive in many cases). An example is the very rapid disappearance of the vinyl LP for the audio CD. And that is the case for these newer transmission techniques. Receiver manufacturers have told industry proponents of CD transmission that they can reduce it to a single consumer chip.

> The military is using HF SSB less and less, yet hams still and will
> continue to use it for a long time to come.

Unless we can get regulatory relief to allow amateurs to use digital voice. There are a number of coding techniques available for voice quality digital transmission in a SSB bandwidth. These are, of course, more robust than analog SSB. And of course VLSI can make them even cheaper than SSB to transmit and receive. These same digital coding techniques can be applied to SS transmissions as well, which would drastically reduce the mutual interference problems currently experienced on amateur HF bands. This isn't blue sky, industry and the military pioneered these methods back when the hardware to implement them was exotic and expensive, and proved them sound. The equipment is no longer expensive, and is exotic to amateurs only because the majority of current amateurs are stuck 50 years behind the technological curve.

> If you want to do what the military does, why not enlist?

Been there, done that. Now it is time to adopt some of the same techniques in the civilian arena. Digital transmission is the wave of the future. Amateurs can embrace it, or be buried by it. This is as big a revolution as the move from spark to CW. Amateurs embraced that change, and even led it to some extent. Amateurs had better get with the program again if we hope ot remain relevant and viable in the future.

John Ackermann AG9V

jra@febo.com

http://www.febo.com/

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

I'm now working heavily with Linux, and help run a TNOS/Linux BBS, and
a Linux native-AX.25 switch. Although I'm not "the world's greatest
authority" on either, I'd be happy to help folks with questions to the
extent I can.

I've developed some experience with full-duplex packet repeaters. I've
built 2 19.2 repeaters, and am working on a 9600 baud one now.

TAPR (Tucson Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the

networking picture, how to link areas using different networking schemes, how to set network parameters, etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details about the Net-SIG (including upcoming conferences).

TAPR Vice President and Board Member

Joint ampr.org IP Coordinator for Ohio subnet (44.070.xxx.xxx)

Maintainer of Standardized Info Sheets on QRP Rigs

They are available from the QRP-L WWW Pages at:

* http://qrp.cc.nd.edu/QRP-L/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

Owner of QRP-L Mailing List

The QRP mailing list is open for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building, etc.

This list was started by me with an announcement on the rec.radio.amateur.misc USENET group in early 1993. Bruce Walker, WT1M, maintained the mailing lists and FTP area from then through August 1994 on a system at Thinking Machines Inc., think.com. Then it was moved to qrp-l@netcom.com until May 14th, 1995. Thanks to Mike Ardai, N1IST, for all his hard work during the time that QRP-L was on netcom.com.

I am still the keeper of the non-electronic archives, including copies of some schematics, etc. Contact me directly or watch this list for more info.

To subscribe, send E-mail to:

listserv@lehigh.edu

and in the body of the message, write:

SUBSCRIBE QRP-L your_name your_call

where "your_name" is your real name, and "your_call" is your callsign, if any. For example:

SUBSCRIBE QRP-L John Doe K5FJZ

A welcome message with more detailed help will follow shortly.

Edward Addy KE0EG

eaddy@nacec.org

Executive Director, North American Center for Emergency Communications

After a large disaster strikes your community and your family, I am sure you will agree that its a little late to start building a massive rapid response, emergency communications system supported by thousands of people within companies, organizations and serving as volunteers to provide essential support services.

We are the North American Center For Emergency Communications Inc. (NACEC), a federally-registered non-profit organization serving North America since 1992. We have been developing a system that merges many different technologies to create a unique, high-capacity, rapidly-deployable solution to the problem of communications outages and shortages that occur following a large disaster. Our volunteer network in using the Internet as its communications backbone, is itself using one of the many technologies employed in NACEC's overall solution.

To help ensure the greatest possible effectiveness in as many communities as possible throughout North America, we are developing a very large volunteer network of community volunteers (Community Ambassadors) who work with our staff and their local communities. If you are community active and are interested in helping, we need your help, NOW. Please, don't wait until disaster strikes, help us to be prepared and be ready to assist your community.

The more communities that are represented by our volunteer network, the more effective we can be in disaster preparedness, emergency operations and in the area of emergency and military family message handling and delivery.

As a NACEC volunteer (Community Ambassador) you will assist with the movement of information that is vital to the continued success and growth of this organization and the survivability of your family and your community following a large disaster.

This project is growing rapidly, as we locate and add new dedicated volunteers from as many communities as possible from across North America. I hope you will join us in making this organization a success.

To find out more about how you can get involved in this project and use your Internet skills to help your community, please review the information that is in our WWW Homepage area which can be found at:

http://www.nacec.org/

An electronic volunteer application form can also be found there as well. Should you have any questions, please address them to my E-mail address above.

division)

To join any or all of the above:

Send a message to:

majordomo@netcom.com

In the body of the message, type:

subscribe list_you_want

Since there appears to be no hope that Netcom will ever improve its mailing list services, w1aw-list has been moved to a server down at ARRL headquarters. See Joe Carcia's entry for more information if you wish to continue to receive W1AW bulletins.

There is no need to unsubscribe from the Netcom list. I'll take care of that myself.

Thanks again for your support and patience with my w1aw-list over the years. Note that this change will not affect any of the other

ham-radio related lists at Netcom.

425 DX NEWS Weekly Bulletin WWW PAGE (NEW SITE!!!)

- ------->> http://www-dx.deis.unibo.it/htdx/ <<---------

NEWS, INFO, RUMORS, DXPEDITIONS, IOTA ACTIVITIES and more

DX CALENDAR, WABA AWARD (rules & scores) now available

in English Version and Italian Version

Same server of the IK4LZH site for QSL MANAGERS.

I am an IOTA chaser, I work DX and I join contests. Actually I'm in
love with RS sats and DOVE telemetry. I'm the Shortwave Listening
(SWL) coordinator of the Italian Amateur Radio Association and I have
a regular SWL page in their official magazine Radio Rivista. Recently
I joined the 425 gang that produces the 425 DX News bulletin. I
translate it into English and send it to many DXers via E-Mail. I also
maintain a WWW page to provide the bulletins graphically with previous
numbers and more to come. I've been an SWL since 1974 when I received
a receiver as gift from my parents. Now I'm 36 and I'm running also a
free BBS devoted to HAM/SWL.

Newington, CT 06111 USA | my doing so. -- Samuel Johnson

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of
ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are *essential* to its ongoing success, so please drop by and say hello!

QEX Editor

Digital Signal Processing (DSP)

Collecting information for the next annual ARRL Computer Networking Conference:

http://www.tapr.org/tapr/html/dccconf.html

For information about the ARRL info server, send E-mail to info@arrl.org with the word "HELP" in the message body.

See Cheyenne Greatorex's entry for information about the ARRL Anonymous FTP Archive and Jon Bloom's entry for information about the ARRL World-Wide Web Home Page.

Author of the following MS-DOS ham programs:

* AutoExam - Examination simulator and study aid
* AutoCW - Morse Code practice program
* DOSGATE - allows users to run programs on your PC remotely
(AutoExam compatible)
* AutoCall - Allows use of the Buckmaster HAMCALL CDROM online
callbook with DOSGATE
* AutoFax - Allows reception of weather fax using Kantronics TNC's
* SeeSats - Real time satellite tracking (text only), DOSGATE
compatible

Most of these programs are available via anonymous FTP from:

* ftp://oak.oakland.edu/SimTel/msdos/hamradio/
* ftp://wuarchive.wustl.edu/systems/msdos/msdos/hamradio/

or write me at:

7 Redfield Circle
Derry, NH 03038
USA

and enclose:

* A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5"
or 5.25").
* A Self Addressed STAMPED return diskette mailer.
* A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

Devon Bowen KA2NRC

bowen@olsen.ch

Maintainer of the rec.radio.amateur.* Supplemental Archives available from:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

[Editor's Note: Fixes have recently been made to the FTP software at this site so that the above URL will now work with most Web browsers.]

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the server's help facility, the rec.radio.amateur.misc FAQ, or additional server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Work on this project has been delayed such that its completion time is somewhere in the indefinite future. In the meantime you can access the current server.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

My electronics expertise is mostly analog, but I have some insights into DSP applications that can do better in what used to be the analog dominions. I can be of the most help with low-frequency analog stuff, particularly measurements and low-level/low-noise/low-distortion applications. I breadboard with IC's, discretes, and surface mounts (which I prefer to use now, as surface mounting requires less drilling of PCB boards once they are etched). My electrical engineering education (Ph.D.) emphasized control systems. I also have a clear understanding of transmission line measurements and behavior (a personal research interest for the last 25 years or so).

I have been an audio engineer. I have directed media productions involving "Multi-Media" audio, multi-projector, and video. I have been a technical director for TV, program director and producer, as well as an engineer for radio production.

Barry Buelow WA0RJT

Barry Buelow WA0RJT Packet BBS in Cedar Rapids, IA
barry@ia.net WA0RJT@WA0RJT.IA.USA.NOAM

The Tucson Amateur Packet Radio (TAPR) Bulletin Board Special Interest Group (BBSSIG) is sponsoring a working group to generate and distribute a series of information bulletins which will serve to instruct packet radio users in a variety of areas. These bulletins will be distributed via the packet network and can be retained at each BBS in a file area. An index will be provided to allow users to find information they desire.

If you are interested in actively participating in this effort and can work on a collaborative effort, please speak up. Send a message to my E-mail address above.

[Editor's Note: As this project is still very much a work in progress, and its eventual products will certainly be made available via several information sources (including the Internet) as soon as they are completed, I'm sure Barry would appreciate it if only serious volunteer contributors contacted him at this time.]

American Radio Relay League | Justice is being allowed to do whatever

225 Main St. | I like. Injustice is whatever prevents
! Newington, CT 06111 USA | my doing so. -- Samuel Johnson
!
! American Radio Relay League (ARRL) Webmaster
!
! The American Radio Relay League is pleased to announce the startup of
! ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL
!
! http://www.arrl.org/
!
! ARRLWeb will serve as an essential Internet resource for active hams,
! carrying ARRL news, details on upcoming hamfests, conventions and
! Amateur Radio examinations, the ARRL Publications catalog, information
! of ARRL membership benefits and services, and more.
!
! In inaugurating this new service, the League thanks Scott Ehrlich,
! WY1Z, and the other Boston Amateur Radio Club volunteers who've worked
! since December 1994 to keep ARRL up and coming on the Web via the ARRL
! home page they installed and maintained at oak.oakland.edu. Their
! volunteerism helped show us that upgrading our Internet connection to
! a level that allowed on-campus Web service would be essential to
! ARRL's mission of serving Amateur Radio.
!
! Your comments, criticism and suggestions on how to make ARRLWeb bigger
! and better are *essential* to its ongoing success, so please drop by
! and say hello!

! webmaster@arrl.org

! American Radio Relay League (ARRL) Webmaster

! The American Radio Relay League is pleased to announce the startup of
! ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

! http://www.arrl.org/

! ARRLWeb will serve as an essential Internet resource for active hams,
! carrying ARRL news, details on upcoming hamfests, conventions and
! Amateur Radio examinations, the ARRL Publications catalog, information
! of ARRL membership benefits and services, and more.

! In inaugurating this new service, the League thanks Scott Ehrlich,
! WY1Z, and the other Boston Amateur Radio Club volunteers who've worked
! since December 1994 to keep ARRL up and coming on the Web via the ARRL
! home page they installed and maintained at oak.oakland.edu. Their
! volunteerism helped show us that upgrading our Internet connection to
! a level that allowed on-campus Web service would be essential to
! ARRL's mission of serving Amateur Radio.

! Your comments, criticism and suggestions on how to make ARRLWeb bigger
! and better are *essential* to its ongoing success, so please drop by
! and say hello!

+
+ I am the Assistant Principal at Estill County High School in Irvine,
+ KY and have been in the education business for the past 23 years. I
+ enjoy helping people earn their ham radio license privileges. I have a
+ test team with the WCARS group and have been testing for a good number
+ of years. We have tested over 300 hams during the last three years.
+
+ I also have been in the repeater business since 1973 (146.820) and
+ have held a ham license longer that any other resident of Estill
+ County Kentucky. I am the fourth ham to be licensed in our community,
+ the other three have either become Silent Keys or moved from our
+ county. I am very proud to have held a ticket for almost thirty years.
+ I hope through my experience with the local emeregency team, I can
+ also provide advice on EMS. I founded the local Rescue Squad in 1978
+ and am still President of the corporation. I was also the local DES
+ Cordinator from 1977-1993.

+
+ HELP WANTED: READERS NEEDED BY HANDI-HAMS
+
+ The Courage HANDI-HAM Center needs volunteer readers to record ham
+ radio books and publications on audio tape. Volunteer readers provide
+ a valuable service to persons with severe physical disabilities and
+ sensory impairments who cannot use regular printed books.
+
+ Volunteers should hold an Amateur Radio license and be familiar with
+ hobby terms and expressions. A clear speaking voice and the ability to
+ read the written text of Amateur Radio books and describe the diagrams
+ and pictures are essential.
+
+ HANDI-HAMS will provide a tech sheet and a sample tape to new
+ volunteers, as well as a copy of the book to be read and cassette
+ master tapes. Readers will need a good-quality cassette tape recorder
+ and a quiet place to record. Some of the books we would ask readers to
+ tape would be ARRL license manuals, special interest Amateur Radio
+ books, and instruction manuals for radios.
+
+ This volunteer work can be done in one's own home, at one's own pace,
+ as long as there is a quiet place to read. It is a wonderful way to
+ share Amateur Radio with others!

"Why don't you just make 10 louder?"
(Spinal Tap)
------------------------------------------------------------------------

! Having recently discovered the joys of Perl and CGI on the WWW, I
! decided to get into the swing of it by coding a WWW page where one can
! take practice Amateur Radio Exams. The page is now complete and has
! all five examinations along with figures (including Extra).
```

! The results are displayed question-by-question and then broken down by
! subelement so that you can see which areas need extra study.

! I am also saving the results from each examination taken so that one
! can get some idea of the relative success rate for each Exam and
! subelement. This may provide some interesting information as time goes
! by.

! The page can be found at:

! http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

! I _think_ it should all work as expected but I welcome any reports of
! bugs and/or suggestions!

- - I hope this is of use to people interested in upgrading.

! PS: If the page is slow, or not to your liking, try Ham Exam at:

! http://w5ac.tamu.edu/ham-exam.html

"Why don't you just make 10 louder?"
(Spinal Tap)

! AA9PW Amateur Radio Exam Practice World-Wide Web Page:

! http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

! This WWW site allows users to practice for the US Amateur Radio
! examinations on-line. The written examinations for all five classes,
! novice through extra, can be generated complete with figures, filled
! in on-line, and then graded. The results are presented
! question-by-question, and also graphically by subelement, so that
! users can identify areas which require further study.

! More advanced options include saving the results of each examination a
! user takes on-line. These results can be used to monitor progress and
! also as a basis for generating exams tailored to a user's needs,
! ensuring that all questions are practiced.

! Exams can also be generated and E-mailed to users without WWW access:

! Send E-mail to exams@eeyore.biochem.mcw.edu with a line in the body of
! the message like:

! generate novice

! This will result in a novice exam being generated and E-mailed back to
! you with the answers included at the end of the E-mail. These exams
! lack the figures, so reference to a printed copy is advised! Simply
! replace "novice" with any of the other exam names (technician,
! general, advanced or extra) to get the other exams. To request
! multiple exams in one E-mail, write multiple "generate" lines.
!
! Other exam resources such as the question pools, copies of the exam
! figures, and FCC Part 97 are also available. A comprehensive help page
! exists to guide users through the facilities of the site. All
! questions and queries are welcome!

! jwalsh@efn.org
!
! Quarter Century Wireless Association, Inc. (QCWA), headquartered in
! Eugene, OR, is pleased to announce the QCWA World-Wide Web Home Page,
! available by either text or graphics browser at:
!
! http://www.efn.org/~qcwa/
!
! Membership in QCWA, a not-for-profit 501(c)(3) corporation, is open to
! any radio amateur licensed today AND also licensed 25 years or more
! ago (there is NO REQUIREMENT for continuous licensing over this time
! period -- if you received your first ham license on or before January
! 1, 1970, you're now eligible). Included on the Web page are:

! * Photos, biographies, addresses and phone numbers of QCWA 1995-1996
! Officers and Directors
! * Database of local Chapters (nearly 200, worldwide), including
! name, address, and callsign of Chapter Secretary
! * Listing of on-the-air Chapter meetings
! * Details of upcoming National Convention -- with photos, as soon as
! we receive them
! * A few words about the quarterly QCWA Journal (we hope soon to have
! excerpts from Editor Barry Wiseman's new, improved Journal
! available to you on the Web)
! * Rules and schedule for QCWA Phone and CW QSO Parties
! * QCWA Memorial Scholarship Program
! * Criteria for and recent winners of QCWA Awards
! * A Photo Tour of QCWA Headquarters and W2MM/7 memorial station
! (soon to display a spiffy new IC-738 . . . THANK YOU, ICOM!)
! * Links to other interesting ham-related Web sites

! Please visit QCWA on the Web . . . and take a moment to E-mail me with
! your comments, corrections, and suggestions at my E-mail address
! above. If you administer a ham-related Web site, QCWA would appreciate
! a Link from your page. We're 12,000-strong -- worldwide -- and
! growing! Come join us!

rustyc@inficad.com

* Callsign Data
* Mobile/Portable/Field Day (FM, HT's, 10m SSB)

I'm willing to act as a reference for anyone wanting info on getting tapes (especially Callsign tapes) from the Department of Commerce National Technical Information Service (NTIS) or wanting other info on callsign-project related stuff.

One of these days I'll actually be around for the un-net! I promise, really!

My job is currently System Administrator for a large UNIX site so I know a little bit about day-to-day UNIX operations and UNIX installation :-) I also have much experience with constructing E-mail paths that will work rather than bounce.

I also have a fair amount of experience in hardware/software interfacing and machine control.

* QRP
* UNIX
* VHF

I'm the 425 DX News Mailing List maintainer. Further info at:

http://www.fr.flashnet.it/cgi-bin/425dxnews-list

I'm the webmaster for:

http://www.fr.flashnet.it

(maybe soon www.saiu.it) and the FTP owner of:

ftp://ftp.fr.flashnet.it/

There's a /pub/ham directory there. There's not much at the moment but
you may use it if you want. Just send new software under /incoming
including a file which tells what kind of software it is.

Expertise includes anything related to the Internet.

I used to work HF, mostly CW and QRP.

I also love Linux but never used it for ham radio, except for a
satellite tracking software :)

where "your_name" is your real name, and "your_call" is your callsign, if any. For example:

SUBSCRIBE tenten-l John Doe K5FJZ

A welcome message with more detailed help will follow shortly.

To unsubscribe, type:

UNSUBSCRIBE tenten-l

(10-X International is an amateur radio organization devoted to encouraging the use of the 10 Meter, or 28 MHz, amateur band. They are primarily known for their "10-X" numbers which members exchange during communications on that band.)

I serve as an Educational Advisor to ARRL and hence fall within the loose bounds of their field organization. I know something of the fundamentals in electronics, having written the current Chapter 6 of the 1995 ARRL Handbook, and something of antennas, with a series appearing in Communications Quarterly. I serve on the Board of Directors of 10-X International and maintain memberships in most of the QRP organizations, as well as the Quarter Century Wireless Association (QCWA). As to what I do not know, there are no limits.

I also know something of the craft of technical writing and editing, being director of Techwright, an occasional consulting operation in this field with my wife, Jean, N4TZP, who has been a technical editor and writer since 1980.

ARES

Team Leader, W5YI VEC

(Exams for Del Norte County every other month)

I've been a ham since 1933. I taught electronics, AC, DC, and radar principles/theory at the U.S. Army Signal Corps School at Fort Monmouth, NJ during World War II. I was chief engineer at KDB in Santa Barbara, CA from 1946 to 1951. I was engineer and technical director at NBC TV studios in Hollywood and Burbank from 1951 to 1982. I have one student now going for his General and prefer to teach the overall picture. I have done little or no benchwork on new equipment in the last 15 years. I'm still learning digital theory and techniques, but boards filled with chips do not evoke a sense of familiarity or recognition. I'm also still learning about the Internet.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636
USA

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

(The GRAPES WWW Home Page is moving to its own dedicated machine at a new ISP. This will give GRAPES direct T1 access to the Internet. It will provide comprehensive GRAPES information, support, and online ordering facilities. I'm told this will all be up and running in a few weeks. Bruce Nebergeld and Dennis Barrow, both former GRAPES presidents and net wizards, are spearheading this effort.)

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

Relayer of Amateur Radio Newsline Bulletins

Amateur Radio Newsline is produced as an audio service by Newsline, a service of the Westlink Radio Network. The transcribed version is produced by Dale Cary, WD0AKO from materials provided by Newsline, and is jointly distributed to online services and bulletin board networks by Steve Coletti and Dale Cary.

Copyright owner is Newsline. Permission to reuse all or part of either this written or the audio form requires that the item be taken in its entirety, not be subject to any further editing or commentary, and that full credit be given to Newsline as the source.

Permission is granted to all amateurs who want to transmit the audio version in its entirety over nets or repeaters. The text version may be used for packet distribution as long as it is sent in its entirety and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in its full form over voice or digital forms of Amateur Radio, it is recommended that the closed circuit advisory be deleted. Audio, Computer, and Packet retransmissions must be made without the editing or deleting of any other part of the Newsline content. Unauthorized additional commentary to the original message is also prohibited. To do so is a violation of copyright and subjects the initiator to legal action by Newsline.

Newsline may also be excerpted for code practice transmissions, and may be used as a reference source in bulletin board discussions under acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of Newsline.

Editorial comment, news items and all other business should be directed to

Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.
E-Mail - 3241437@mcimail.com or BILLWA6ITF@aol.com

Maintainer of Advanced Computer Controls (ACC) and Link Mailing Lists

The ACC list has approximately 60 members at this time. I am trying to restrict the list to only ACC users (control people) and owners. The list is also supported by the new owner of all the rights to ACC, Link Communications. I am also running the Link repeater controller list server. It has approximately 90 members at this time.

The way to join the list server is to send me a short E-mail and tell me what equipment you are using.

(Note: I have no ties to Link Communications or ACC. I started the Link list first and found how useful it is. I had a lot of requests to start the ACC list and did it.)

USAF MARS Region 2 Packet Manager

William (Bill) Coyle N3OGH

wcoyle@iss.dccc.edu

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I also use SSB. I have had experience with light service on both rigs (including the internal antenna tuner on the 940 and the tube finals on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2 meters, and have recently gotten involved in packet radio (having gained some experience on the hardware end of setting up such a station).

Michael Crick

mica@crick.com

Bellevue, WA

http://crick.com/mica/

I design and write software. I have written a top of the line Ham Radio training program for Windows called "Ham University". You can download a free demo copy from my web site.

I also helped write Microsoft Windows. I am not a ham operator but more of a web nut (I was part of the group at BBN that developed the ARPANET back in 1967). However, in designing Ham University, I got a lot of expert advice. I think it will meet many people's training needs.

mattd@branson.org -- send here first, please!
mdaless@ocf.berkeley.edu

I cannot claim to be an expert in any field, but I did participate in SAREX as the project coordinator for our school (The Branson School) in the STS-64 mission. I will be happy to help anybody else who is interested in any and all aspects of the SAREX project. I also know a little bit about UNIX administration, but I find myself asking questions more often than answering them.

I am a high school senior, so my real area of expertise is getting young people involved in ham radio. I was a speaker at the Dayton HamVention Youth Forum, and am active in recruiting in my local community.

I've been an active Linux advocate since it first appeared on the
Internet. I was looking for an operating system that would better meet
the needs of my interest in Amateur Radio and provide me with an
environment in which I could actively experiment and develop. Linux
provides that and I've been promoting its use within Amateur Radio
ever since.

I'm an early contributing member of the Linux Documentation Project,
and you'll find the amassed works for it at:

http://sunsite.unc.edu/mdw/

ampr.org IP Coordinator for Sydney, Australia Metropolitan Area subnet
(44.136.xxx.xxx)

(I'm also the co-administrator of the Sydney University of Technology
Internet/ampr.org gateway.)

I'm happy to assist with information relating to:

* Linux, especially when related to Amateur Radio.
* Amateur Radio Internet Gateways

State Frequency Coordinator, Texas VHF-FM Society

(We do the repeater coordinating in Texas.)
~~~~~~

I have done HF, Satellites, VHF/UHF, and been in amateur radio for 10 years. I don't know it all, but through my contacts I can find someone that can usually answer most of the questions.

I also know of several other coordinators in the US and have contacts through the ARRL and a BBS.

Brian Gilhuly VE3BGB

Brian Gilhuly VE3BGB Author of KENTROL, the ultimate in
rig control/logging/memory mgmt software
brian@synapse.net for Kenwood HF rigs and MS Windows
CompuServe: 73257,3131
Tel/fax: +1 613 623-9735 Kentrol Web Page:
http://www.synapse.net/~kentrol/
76 McDonald Street S Kentrol FTP Site:
Arnprior ON K7S 2W5 Canada ftp://ftp.synapse.net/private/k/kentrol/

Kentrol is a Windows 3x control program for Kenwood HF transceivers and the R-5000 receiver, which has built-in logging and memory-management capabilities. Since its introduction in 1991, Kentrol has set the standard for Windows-based rig automation, and new features continue to be added regularly. SkedMan is an automated sked manager for Kentrol. Enter schedule data, set alarms, and when an alarm goes off, SkedMan uses - even launches - Kentrol to tune it in.

Kentrol and SkedMan are shareware, so if you haven't tried them, you are most welcome to do so.

Eran Glago KD6KVO

glago@aol.com

I am into public service, and also ARES/RACES. I am the Emergency Coordinator for both organizations in Sonoma Valley, Sonoma county, San Francisco Section of California.

We do ARES and RACES as one program here, and actually lean more towards RACES because the government entities are so supportive.

I like to encourage newer hams to participate in the events for which I coordinate the communications. It's ideal training for emergency services, and it's fun, too. Codeless Technicians who can't

participate on most HF NTS traffic nets have a real role to play here, as we generally use VHF and UHF, and these amateurs are instrumental with their enthusiasm in filling the rosters.

It's also sometimes a good initiator for those new hams who are self-conscious talking with other, experienced hams one-on-one, but are OK talking formally to a net control station. Similarly, I try to encourage those new hams who became hams so they could talk to their ham spouses, and all you ever hear them do is talk to their spouses and to no-one else. While that's perfectly OK in and of itself, public service is a good way to break out of that mold and get more fun from radio while really helping out.

n1qzs@magrathea.com

http://www.magrathea.com/~ctg/

I co-maintain the Boston Amateur Radio Club anonymous FTP file
archives with Phil Temples, K9HI (phil@temples.com).

A sampling of the archives include:

A virtually complete archive of all ARRL bulletins since 1992 is available
at:

ftp://ftp.barc.org/pub/hamradio/barc/w1aw-list/

A mirror of all files available from the ARRL info server is also available:

ftp://ftp.barc.org/pub/hamradio/arrl/infoserv/

The ARRL infoserver mirror has FCC Part 97 (U.S. Amateur Radio Service Rules
and Regulations) at:

ftp://ftp.barc.org/pub/hamradio/arrl/infoserv/rib/part97.txt

Programs mentioned in QST are in:

ftp://ftp.barc.org/pub/hamradio/arrl/qst-binaries/

Amateur Radio Newsline is now also being archived, too:

ftp://ftp.barc.org/pub/hamradio/docs/newsline/

Macintosh Amateur Radio Software Archive:

ftp://ftp.barc.org/pub/hamradio/mac/

Please direct any feedback, submissions, or administrivia regarding
these resources to my E-mail address above.

* Antennas (HF/VHF/Wire/Mobile)
* Antique and Older Equipment
* HF
* Homebrewing
* Chemical Safety

I can help people with HF stuff, cheap antennas, and am willing to
help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service
their own equipment. I would like to see a turn-around here...

pschleck@novia.net

(finger pschleck@novia.net for PGP Public Key)

http://www.novia.net/~pschleck/

Internet Services (Finding FAQ's, using Usenet, FTP, telnet, Archie,
FTP mail-servers, mailing lists, etc., etc.)

Club Activities, Examinations, and other events in the Omaha/
Lincoln/Council Bluffs (Eastern Nebraska/Western Iowa) area.

Also willing to provide newsreader kill/select file help to anyone
interested in customizing their presentation of the rec.radio.*
newsgroups

I would be particularly interested in mentoring/training new FAQ/Info
maintainers for the rec.radio.* newsgroups (see also Jack Hill and
John Seney for FAQ maintenance opportunities and the
rec.radio.amateur.* Working Group mailing list). To paraphrase Zack
Lau, I can't post it all myself!

I have taken over maintenance of the Perl-based auto-faq FAQ
management and posting package from Ian Kluft and would be happy to

guide new FAQ authors in its use. The latest version, 3.2pl2, is
available via anonymous FTP from:

ftp://ftp.novia.net/customers/pschleck/auto-faq/

The auto-faq-users mailing list has also been re-sited at Novia. To
subscribe, send E-mail to auto-faq-users-request@novia.net

with:

subscribe auto-faq-users

in the message body. An acknowledgement message will follow shortly.
To unsubscribe, replace the above command with:

unsubscribe auto-faq-users

Recently I undertook some academic research into packet radio using
KA9Q's Multiple-Access/Collision Avoidance (MACA) link-layer protocol.
I attempted a literature survey as well as some software simulations
of the protocol (with varying degrees of success). I would welcome any
opportunities to improve on my work, find out about any actual MACA
implementations, share information, and build on my bibliography
(available on request). More information about MACA may be obtained
from:

http://www.novia.net/~pschleck/wireless.html

I am a comunications sergeant for the U.S. Army. My particular specialty is tactical HF radio. Our primary means of communication is with 20 Watt manpackable radios with a data burst device.

I have experience with both short and long-haul HF communications and am willing to give whatever (publicly-available) information I can about antenna construction and basic radiowave propagation.

I have experience in tactical (field-expedient) antennas as well as basic radio wave propagation. I also have experience with larger less tactical antennas such as the doublet and NIVIS. Most of the antennas that I deal with are large-half or quarter-wave in length for frequencies ranging from 2 to 29 MHz.

Manager, Courage HANDI-HAM System

I have information pertaining to Amateur Radio and physical disabilities or sensory impairments, such as blindness.

Visit us on the World-Wide Web:

http://www.mtn.org/handiham/

HELP WANTED: READERS NEEDED BY HANDI-HAMS

The Courage HANDI-HAM Center needs volunteer readers to record ham radio books and publications on audio tape. Volunteer readers provide a valuable service to persons with severe physical disabilities and sensory impairments who cannot use regular printed books.

Volunteers should hold an Amateur Radio license and be familiar with hobby terms and expressions. A clear speaking voice and the ability to read the written text of Amateur Radio books and describe the diagrams and pictures are essential.

HANDI-HAMS will provide a tech sheet and a sample tape to new volunteers, as well as a copy of the book to be read and cassette master tapes. Readers will need a good-quality cassette tape recorder and a quiet place to record. Some of the books we would ask readers to tape would be ARRL license manuals, special interest Amateur Radio books, and instruction manuals for radios.

This volunteer work can be done in one's own home, at one's own pace, as long as there is a quiet place to read. It is a wonderful way to share Amateur Radio with others!

ARRL Technical Information Service Coordinator (tis@arrl.org)

ARRL E-Mail Information Server SysOp (info@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL E-Mail Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

Dr. Len Traubman (DDS) W6HJK

ltraubman@igc.apc.org

http://www.igc.org/traubman/

Russian Phrases for Amateur Radio:

http://www.igc.org/traubman/russian.htm

This 20-page syllabus was compiled during the Cold War by W6HJK to help amateurs better communicate with their Soviet colleagues. A 90-minute audio cassette has been added to help with pronunciation. You need not be an expert in Russian, only interested in "trying."

The booklet provides (1) English words and phrases for QSOs, accompanied by (2) the Russian translation and (3) the English transliteration, to assist you in pronouncing the Russian.

The syllabus follows the natural sequence of a QSO. There are additional sections on the Russian alphabet, phonetics, CW characters, numerals, and given women's and men's names. Suggestions are made for addressing mail to the former Soviet Union.

The author undertook this project out of a personal interest in improving the quality of his QSOs with Soviet hams and to enhance USA-USSR relations. A nominal cost of $6 US ($8 US international) for the booklet, and $6 US ($8 US international) for the audio cassette, are payable to the Foundation for Global Community (formerly Beyond War), the original original sponsor of this educational endeavor to build global dialogue and cooperation.

Requests should be sent to:

[Editor's Note: It is my intention to keep the Elmers List as comprehensive and useful as possible, representing a broad spectrum of amateur radio activities. To that end, I have tried to make only very minimal content judgements, if at all. Though this organization seems to serve larger political and propaganda goals that I personally may not agree with, I think the amateur-radio-related content, and the useful product being offered, is redeeming enough to include here. As always, criticisms regarding any Elmer's entry may be directed to the Elmer him/herself.]

AA9PW Amateur Radio Exam Practice World-Wide Web Page:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

This WWW site allows users to practice for the US Amateur Radio examinations on-line. The written examinations for all five classes, novice through extra, can be generated complete with figures, filled in on-line, and then graded. The results are presented question-by-question, and also graphically by subelement, so that users can identify areas which require further study.

More advanced options include saving the results of each examination a user takes on-line. These results can be used to monitor progress and also as a basis for generating exams tailored to a user's needs, ensuring that all questions are practiced.

Exams can also be generated and E-mailed to users without WWW access:

Send E-mail to exams@eeyore.biochem.mcw.edu with a line in the body of the message like:

generate novice

This will result in a novice exam being generated and E-mailed back to you with the answers included at the end of the E-mail. These exams lack the figures, so reference to a printed copy is advised! Simply replace "novice" with any of the other exam names (technician, general, advanced or extra) to get the other exams. To request multiple exams in one E-mail, write multiple "generate" lines.

Other exam resources such as the question pools, copies of the exam figures, and FCC Part 97 are also available. A comprehensive help page exists to guide users through the facilities of the site. All questions and queries are welcome!

==========
This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited
equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when
the baby is asleep, so the XYL demands silent running. Besides, with
my wimpy wire, there is little point in trying to run voice.

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (The Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing

lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please

indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed.
Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to
listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing
list maintenance. You may address membership requests to
martha@amsat.org, or send them by mail, phone, or fax to AMSAT
headquarters:

Conway Yee N2JWQ

yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229
USA

Maintainer of the Universal and Free Listing of Repeaters for Radio Amateurs

This listing with all the data is available for anonymous FTP from:

ftp://mipgsun.mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/scripts/HamRadio/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my intent is to make sure it stays that way. For this reason, I have applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and is not limited to the US. This reflects the intent to make this directory universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipgsun.mipg.upenn.edu/pub/yee/uploads/

or via E-mail to yee@mipg.upenn.edu

The data format has not been changed from the old format so contributions that you were planning to make (prior to my recent troubles) are still current and most welcome. This repeater listing will be of use if people take an active part in making it accurate and useful.

Dean R. Madsen KE0WO

Dean R Madsen, KE0WO Computer Science Major
Internet: dmadsen@iastate.edu Iowa State University
ke0wo@iastate.edu Ames, Iowa
AX25: KE0WO @ KE0WO.#NWIA.IA.USA.NA
Secretary for the Tristate Amateur Packet Association
Treasurer for the Cyclone Amateur Radio Club

A few members of our ham radio club were interested in helping out. Since our turnover is usually 4 years or so (graduation is a horrible thing), I thought it may be difficult for us to keep the list up to date. I thought that by creating a local mailing list called elmers@iastate.edu we could add or remove people as need be. There would always be at least one person receiving mail on that list, usually more! Even after I graduate, this list will be maintained allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

Fred O. Maia W5YI

fmaia@internetmci.com

http://www.w5yi.org/

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
USA
Tel. +1 817 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse Code training products are also available from every Radio Shack nationwide. Color photograghs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 817 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 817 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 800 322-1117.

Steve Mann N1NLF

steve@media.mit.edu

April Moell WA6OPS

emcom4hosp@aol.com

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated Hospital Disaster Support Communications System (HDSCS) of Orange County, California have served over 35 hospitals in nearly 50 emergency situations. At the new HDSCS site on the Web, you can find out how volunteer Amateur Radio operators can be an important backup communications resource for hospitals, if the hams are well organized and trained.

There you will find:

* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently Asked Questions about hams helping hospitals
* The surprising answer to "How often do hospitals need hams, anyway?"
* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet, as well as system administration of UNIX and UNIX-like operating systems (with an emphasis on networking, E-mail, etc.). My current concentration is on writing UNIX based tools (e.g. software for logging, antenna design, propagation analysis) that can be shared throughout the ham community.

I also maintain the ve7tcp.ampr.org server. This system hosts a variety of ham-radio related mailing lists as well as a comprehensive World-Wide Web site and FTP archive, and was one of the first Internet servers dedicated to ham radio. The system is also a hub site for the

ampr.* newsgroups.

Information on the mailing lists offered can be had by sending an
e-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message body. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a
currently valid amateur radio license. The server provides a number of
useful tools for the radio amateur, including satellite tracking
software, CAD design software, SPICE, and other tools not generally
available to people running on Microsoft Windows or Apple based PC's.
(It runs 4.4BSD UNIX.) To obtain a login on the server, send a
photocopy of your current amateur license, along with a SAE and IRC
to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address
listed on your license.

Maintainer of the Internet DX Mailing List

To subscribe, send an E-mail request to:

dx-REQUEST@ve7tcp.ampr.org

with the following line in the message body:

subscribe dx

Bruce Perens K6BP

perens@hams.com

Maintainer of Linux for Hams CDROM

What Is Linux for Hams?

Linux for Hams is a full-featured Linux system with special additions for Amateur Radio. The system includes all of the sophisticated software that one would expect on one of today's engineering workstations, along with software for packet radio communication, electronic design, printed-circuit manufacture, a database of FCC rules and license exams, a code-practice program, and other Amateur Radio applications.

The general-purpose software includes software for connecting to the Internet, compilers for the C and C++ languages, a full-featured typesetting system, a symbolic mathematics program, CDROM authoring tools, and many other programs. Unlike other Amateur Radio software collections, Linux for Hams is an integrated system. The programs are already compiled and configured to work together with the rest of the system.

Linux for Hams is being built by Bruce Perens AB6YM, with the help of several volunteers. Of course, it builds on the work of the thousands of volunteers who helped create Linux and the other programs it contains.

The system will be available for free if you download it using FTP. A low-cost CD will be available, for about $30 US.

Free CDROM Subscription for Volunteers

Most of the software in Linux for Hams is free software, contributed by its author for anyone to use. I would like to compensate those authors for their work. If you are the author of a significant piece of software included in Linux for Hams, please E-mail to Perens@Rahul.net. You may be be able to get a free CDROM subscription to Linux for Hams.

Bruce Perens AB6YM reserves the right to decide who gets free subscriptions, what is included in a free subscription, and for how long those subscriptions last.

For more information about Linux for Hams, check out the WWW page:

http://www.hams.com/perens/LinuxForHams

or send E-mail with the word "help" to:

info@hams.com

[Editor's Note: This project seems to be delayed as the result of schedule slippages with the Debian version of Linux. For more information about the status of the Debian Linux System, please contact David Engel at david@ods.com.]

(Formerly wsmr-simtel20.army.mil)

(simtel.net is a service mark of Walnut Creek CDROM)

Announcements regarding uploads to Simtel of amateur-radio-related software are cross-posted to:

news:rec.radio.info

[Editor's Note: This outstanding archive collection, which incorporates much amateur-radio-related software, is listed here for completeness. However, as Keith gets about 200 E-mail messages a day, he strongly encourages self-sufficiency in the use of the archive. The above URL's contain several documents regarding how to download files from and upload files to this archive. There are also many other Elmers willing to answer beginning-level questions regarding accessing files via FTP and WWW. Consult the "INTERNET SERVICES" category in the Subject Quick-Search Index for a complete list.]

I'm a software engineer specializing in Macintosh development, and I've been a ham since 1982. I was first licensed at age 14, and I now hold an Extra class license. My expertise is in antenna-building and theory, CW (Morse Code), DXing, SWLing, and HF operating practices in general. I also operate mobile in a '96 Ford Ranger pickup. I'd be happy to help any new or aspiring amateur radio operators.

I have considerable experience in computers, some in packet, with an informal training in electronics. My background includes electronic surveillance countermeasures such as looking for interesting signals or wire connections with spectrum analyzers/receivers and TDR's, etc.

I'm not very active in operating, but have had a fair amount of experience when young.

I would prefer dealing with people in my local area, since many well-informed experts are available via the Internet.

PhD Candidate in Adult and Higher Education

Educational Advisor, American Radio Relay League

I am primarily an adult educator conducting research in self-directed learning. I have been involved in the following activities:

* Teach licensing classes, since 1974.
* Organize clubs, Stuttgart Amateur Radio Club, Panama Canal Astronomy Club, Lawton Astronomy Club.
* Public speaking and publish on growth in volunteer organizations, marketing adult and higher education and teaching amateur radio courses.
* Research in adult learning theory, adult motivation and organizational theory.
* Conducted a SAREX activity that involve seven communities, 21 schools and 3,000 children.

I am primarily interested in assisting amateur radio clubs grow.

Peter Reynolds (KE4BAD) E-mail: reynolds@stc.nato.int
Voice: +31 70-314-2410 FAX: +31 70-314-2111
Senior Scientist, Radio Branch, Communications Division
SHAPE Technical Centre, PO Box 174, 2501CD The Hague,
The Netherlands CompuServe: 100276,1340

I am very lucky in that I earn my living in radio communications, so my expertise is fairly broad (but not focused on amateur techniques only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over the years. I always enjoy discussing and researching a communications problem so if you don't see it listed above drop me a line anyway, especially if you happen to be in Europe.

* Volunteer Examiner (WCARS VEC)

I am the Assistant Principal at Estill County High School in Irvine, KY and have been in the education business for the past 23 years. I enjoy helping people earn their ham radio license privileges. I have a test team with the WCARS group and have been testing for a good number of years. We have tested over 300 hams during the last three years.

I also have been in the repeater business since 1973 (146.820) and have held a ham license longer that any other resident of Estill County Kentucky. I am the fourth ham to be licensed in our community, the other three have either become Silent Keys or moved from our county. I am very proud to have held a ticket for almost thirty years. I hope through my experience with the local emeregency team, I can also provide advice on EMS. I founded the local Rescue Squad in 1978 and am still President of the corporation. I was also the local DES Cordinator from 1977-1993.

Chuck Rippel WA4HHG

crippel@exis.net

Secretary, Collins Collectors Association

The Collins Collectors Association would like to invite those of you who have an interest in Collins Radio to subscribe to the now fully automated Collins Reflector. This service is sponsored by the CCA and is provided at no charge to Collins enthusiasts.

There is an FAQ which will hopefully be sent to each new subscriber when they "sign on." If you would like one and don't get it, drop me an E-mail at my address above.

There may be a few initial bumps and glitches at first but we hope those of you who choose to participate will enjoy it.

As of 1/6/97, the Collins Reflector will be fully automated and I will discontinue forwarding the mail manually as in the past.

The new automated list processor will be a real upgrade. It will enable you to get the material in nearly real time and does not require me to forward each message manually. You will get the material much quicker than before. The Collins Listserver behaves much like the Boatanchors list. Simply, you subscribe to the list, send it messages which it then "reflects" back out to all those who subscribe. This is done once every ten minutes.

You must resubscribe to the new listserver in order to continue to participate. The automated list server follows the same guidelines contained in the CCA FAQ. Please continue to follow those guidelines for posting and contributing.

Here is how to subscribe:

Send an E-mail message to:

listserv@listserv.tempe.gov

Leave the Subject header of the message blank and in the body, simply type:

subscribe collins

The listprocessor will output an E-mail message back to you with easy to follow instructions asking for your confirmation. At that time, you will be asked to send a second E-mail message to the listserver. Follow those instructions exactly and send the second, confirmation, message to the listserver.

If all is successful, you will be signed up to the list and a complete set of instructions will be sent back to you in the form of an E-mail by the automated list server.

Finally, a very big thanks to Dave Kelly, AI7R and the City of Tempe, AZ who have graciously provided and set up the server. Dave and the Collins Collectors Association sponsor the Collins Reflector as a no charge benefit for Collins afficionados everywhere. Enjoy!

* QRP
* VHF
* Volunteer Examiner (W5YI)

I suspect that I would be classified as a "classic" amateur operator. While not a proficient homebrewer/RF designer (yet), I pride myself on the ability to construct equipment from kits, as well as being able to competently debug and fix the equipment I use - this is a set of skills that is becoming too rare in our "appliance operator" world.

While many see a need to run high power and large antennas, I do not. I live in a development with antenna restrictions, and I choose to not expose my family and neighbors to high RF fields.

This has led to my love of QRP (low power) operation. Working from the eastern U.S. into Germany at 100 Watts is pretty neat - but to do so on 1/2 Watt? A flashlight uses more than that, and it's being seen some 4,000 miles away, AFTER bouncing off the ionosphere TWICE!

I also enjoy an occasional contest, although I am more relaxed about operating than the annual "winners." I always operate on Field Day with fervor, last year assisting the University of Maryland in making 205 QSO's (most of them CW) at 4 Watts of output power into wire antennas.

I greatly prefer CW over phone. I can frequently be found on 2m repeaters during trips and the drive to and from work.

I have confirmation of contact with 138 countries and have earned my WAS and WAC awards. I have been a Volunteer Examiner since age 18, and a ham since age 15.

I get a great deal of joy from watching others learn something new, and then embrace it as their own. Ham radio is a wonderful way to become involved in public service and a great, technical, hands-on hobby that can lead to careers and a lifetime of enjoyment. I find great pleasure in making others aware of it.

Bill Roth N7RYW

n7ryw@teleport.com

AMSAT-NA Life Member #2109

I am the AMSAT coordinator for the Portland, Oregon area and I do a lot of the "Elmering" in this area as well as steering people toward others.

This would be for satellites only, as I am not doing HF anymore.

I am currently set up for all of the digital and analog satellites, all modes including AO-13 Mode S and weather sats.

I would be happy to assist people with getting started and beyond in all areas of satellite operations.

Henry Ruh KB9FO

atvq@aol.com

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can Elmer on most subjects, but not spread spectrum or packet.

I have nearly 30 years experience in electronic/computer service work. I enjoy designing, building, and operating vacuum tube and solid state equipment. I restore, test, repair, and operate antique radio equipment. The maximum power I use for daily operations is always below 100w, and most of the time, I operate at QRP (5w) or less! (More with less.) I have a real enthusiasm for building just about anything from nothing, as part of the homebrew aspect of the hobby. When not working DX, enjoying a good contest, or have a great time on Field Day, I watch over my 6m repeater, or work VHF packet. I am glad to be of help to those in need! I fully support the Elmer program as a means to bring new people into Amateur Radio. I teach Novice and Tech classes for aspiring Amateurs. I am also a merit badge instructor for the scouting program, and the advisor for the Bloomsburg University Amateur Radio Club.

* Radio Officer and Chairman of Operations Committee for Lycoming County ARES/RACES/SKYWARN program
* Assistant EC for my local district, and Pennsylvannia State Director for NACEC
* President of Keystone Amateur Radio Association (KARA)
* President of The Bald Eagle Repeater Association

5022. Elmers List Deletions Delayed Until April

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-03 00:00:00 UTC
From: pschleck@oasis.novia.net
Message-ID: <5ffj1a$jhq@oasis.novia.net>
Source record: 203128

Due to an unusually large workload this month, both from adding new Elmers and updating the entries of existing Elmers requesting last-minute changes, the deletion of obsolete entries (about 140) will be delayed until the next regular posting of the Elmers List, which will be on April 7, 1997. The addition of a number of new registrants (about a dozen) in February was also deferred until next month for the same reasons.

If your name appears on the following list, your entry will be deleted next month. If you wish to remain on the Elmers List, please contact me as soon as possible with updated information about your entry.

Is Amature Radio so weak then that without the code test, it would just shrivel up and die? Is the code test the only thing that insulates the HAM world from that of those vile, evil scum of the CB netherworld? I think not! If the Amature Radio service will servive, it can do it without the code test. It is not like the FCC is throwing away the all coveted "HAM" exam, and letting it all go to the pigs! (No intention to slander or otherwise demean pigs.) I wish you guys would get up on your soapboxes on real issues like "Freedom of Speach", the way alot of holier than thou's are trying to remove it from the lists of "Freedoms" that we as Americans have been granted!!

I am just getting into amateur radio and I need some suggestion of where to get a radio and what type I should get. I am looking at something hand held because I would use it more when I was on the road or at work so I would have to be able to move it with ease. Any suggestions would be appreciated, thanks.

Go down to your local Soldier of Fortune supply shop and see if you
can find a pair of LASH units. They're heavily used by SWAT teams
around the world for tactical communications. Basically they are units
that go around your neck. Everything you whisper is transmitted. Low
noise, less chance for situation compromises.

Other than that, sounds good to me. A soldier must use every tool at
his disposal for victory.

I think a lot of Hams started out in CB. Possibly more than care to admit
it.
When I was in High School, (1970's), I had a CB, an Eico Sentinal Pro, and
I had great fun with it. I even met a girl friend over CB. Went out with
her about 3-4 years.
I still think CB could be fun, but I don't think I could put up with all
the B.S. on the air now.

Give Duane Heise, AA6EE, a call at (619) 789-3674.

He can beat the ARRL price on the QST-CDs, ARRL Handbook, other
ARRL publications, as well as the "Flying Horse" callbooks, both
paper and CD version.

You might even find Duane at some of the swapmeets in SD County. He has
been at the last two ARRL Southwestern Division Conventions, as well.

I hear this whine on a regular basis and I'd love to see something
that substantiates it. My alma mater (University of Illinois) has
if anything gotten more difficult to get into. Students need ACT
composite scores in the upper 20's and must be in the top 10% or
so of their graduating high school class. They get a large
percentage of students with many hours of AP credit, i.e., having
taken not only all the high school prerequsites, but a number
of college level courses as well. This hardly sounds students
that need to be taught remedial-level material.

> The reason we don't see more kids becoming hams today might be their

Or perhaps they are smart enough to realize that any group that is
stuck in the late 19th century doesn't warrant much examination.

Interesting... You must have the machine shop necessary to accurately
drill 30 holes perfectly in line, spaced to 0.1 mm over 7 meters,
and the requisite test equipment to unsure proper match, tuning,
and pattern. Although I design and build VHF+ antennas, for expediancy
sake, I often buy long boom yagis over making one. One might ask why
any fool would buy an HF antenna. "Hahaaha - what a riot!" Let ye
without fault cast the first stone.

Sorry to hear you are semi-disabled and congratulations on
learning whatever it is that floats your boat. But please
explain to me why the amateur radio service will end up like
Citizen's Band radio? This "sky is falling" notion is nothing
more than that. Citizen's Band radio was a well behaved,
gentlemanly service for years without a Morse Code requirement.
It degenerated into 75 meters, although it never dropped
a requirement it didn't have. So just what is the analogy
you were trying to make?

Source record: 203136

Why dont you come and join in. 97% of the band is open to a No-Code Tech. And with AMSAT 3D being launched in July, World wide contacts can be made in 48 hour chunks. HAM bands at 30Mhz and below sum up to only 3.75 Mhz of bandwidth.

Dont let the code requirement stop you. Its just a little bit of study to enjoy some DX that is not dependant on Solar Radiation.

Jeff, your blanket statement "...commercial radios *will* be able to
withstand such temperatures" is not necessarily correct. Certainly, some
will, but come won't. For instance, Yaesu markets their VX-10 radio for
police and fire use and except for the CPU and programming, its identical
to their FT-10,11,50 radios. Continuing, Radio Shack sells 'commercial
radios' that would probably melt in the sun!

Hi,
Name is Gary,
I have for sale a Kenwood TM-733A with backlit mic and duplexer.
This radio is only three months old and has box/manual and warranty.
I bought this radio on a whim because they were closing them out for a
good price. Well, you know how that is...buy first and find out if you
really need it later...Hi.
I would like to get what I paid for it.
That is $395.00 and I will split shipping.
I will be out of town for a few days but you can reply to me at this

The only problems I can see with LASH units are these:

1) When I pull the paintball trigger will the LASH unit pick up the
shot and transmit it? If so, I could probably wire the LASH up to
a PTT switch or something similar. VOX systems don't work when shooting
guns (for obvious reasons).

2) Every LASH unit I've ever seen has been prohibitively expensive. I
did use a LASH one time, but that particular unit costed $1200. I
need something cheaper. Is it possible to homebrew a poormans LASH
unit or maybe buy a few of them for a cheaper price?

>Other than that, sounds good to me. A soldier must use every tool at
>his disposal for victory.

Very, very true. Last year when I went Paintballing, I used a CB because I
thought I would be wasting bandwidth on 70cm. I guess the opposing team
also used CBs for their communications and they eavesdropped on our
communications. They ambushed us and my whole team was anniahalated.

Also, does anybody know how to make an HT weatherproof and waterproof
and also readily available for scanning and changing frequencies and other
functions?

Phillip,
I have a FT-50 and I bought the adapter. It is fairly small (about 1/2 in. high) and seems to do the job. I believe it to be sturdy enough for most applications. I personally woundn't worry about it breaking off. There is very little chance for it to happen unless you are REALLY rough with it. Personally, I like the FT-50. It is a nice, small compact HT at a good price.

If the view of one person is all it takes to discourage you from
pursuing a goal, then, perhaps, the motivation was never really there.
Why don't you go ahead and get your license. Then, form your own
opinions based on
your experiences rather than just accepting the opinions of others. I
think you will be pleasantly surprised, but that is just my opinion :-)

Ham radio has lots of suprises:
never realized how boring 2 meter repeaters can be
never realized how stupid most hams really are
never realized most hams can't have fun

Notice I never said ALL

> by someone who was trained under the French, who regard civilian
> possession and use of radio equipment about the same as civilian
> possession and use of a machine gun.

This is not France. We are not French subjects.

> Although I don't buy that philosophy to any great extent, some
> of it still sticks (exclusive of ham radio, of course <ggggg>).

Too bad, why not move there where your view fits in.<ggggg>

> One of the things that I will not back away from is the
> necessity of the regulatory agency to have the capability to
> verify that the signal is in compliance (or non-compliance) with
> all rules, technical as well as content where the latter exist,
> as they do in the amateur service.

One of the problems. Rigid control stiffles new technology.

> CRS> and the rule regarding keeping
> CRS> copies of all transmissions for a year is onerous ...

Its bull.
>
> Until and unless the rules change to no longer require FCC to
> exercise content control on amateur transmissions (there is no
> content control on Part 15 stuff) the need to "read" the traffic

> time on its facilities to the great unwashed civilian agencies.....

Let the ARRL handle this. They are unsurpassed at screwing
up a good thing like new technical frontiers and freedom.

> Add to that one of the nice side-effects of SS signals (your
> taxpayer DoD money at work over the years to ensure this) - very
> increased difficulty in direction-finding (difficult but not
> impossible) and you have another reason why "complex"
> super-sophisticated schemes are not looked on with glee for
> amateur use. Remember that the heyday of several bureau chiefs
> being amateurs is long past.

Why? Part 15 devices need not worry about DFing or content.
The cart is before the horse.

> There were some of us at the FCC who actively fought approval of
> SS for amateur use because of the inability to perform those
> required regulatory functions in an efficient manner with what
> we had in those days, and our real concerns caused The Congress
> to let some money loose for some new equipment. Not enough, of
> course.

Such a big threat. Rather do away with source: Hams

> CRS> Let's face it ... large parts of Part 97 technical rules are
> CRS> outdated, obstructionist, and absurd.

Agreed. The man is right. The ARRL has negotiated this for us.
We won't need new rules when there will be no one to rule.

> Your personal opinion. Wear the moccasins for a while......

Whatever that means. Smoke another one!

> The amateur radio service - as well as any other service -
> exists on the sufferance of the agency, not vice versa.

Too bad we needed NTS and contesting instead of freedom to
experiment. Lack of equipment is no excuse to hold
back a "service". No wonder we are doomed as a "hobby"
Just a set of bookmarks for wireless to "harvest" for $$$

> 73 de Phil Kane - K2ASP (since 1952)

45 years and still not living in France as a subject.

Good luck. The service is gone. Renamed a "hobby" where
people contest, not contribute. Ham radio service - R.I.P.!

Is it possible to damage a CCD? Would a low power laser do that?

Did you know Gould used CCDs in one of it's digital storage 'scopes,
pretty dam clever, I think.

Hi and thanks in advance for your help,

I was reading a back issue of 73 Magazie (May 1996) and came across an article on the "Bioelctrifier". I was wondering if anybody has had any experience with this or can tell me where I might find additional information about it on the 'net

Thanks again for your help,

Please e-mail me directly with any info you might have
as I don't get a chance to check in this group as often as I'd like.

thanks

Tom

How can this possibly work/make sense? Suppose company A wants a frequency,
and goes to coordinator B, who finds a frequency of X. At the same time,
Company C goes to coordinator D who also finds an unused frequency, which
turns out to be the same as X. Later on, how does coordinator B know what
coordinator D issued? Or are applicants going to have to apply with both
coordinators? What Have I missed?

> Please, every day ENGLISH is OK and preferred.

Well Brian, "every day english" changes from region to region. There
are some
very different daelects(sp?) throughout North America.

Heck imagine somone from Boston talking to someone in Texas. I don't
mean to stereo-type, but we've all been there.

Some folks say that they received your information in different ways.
In
a weak signal contact these can all be confusing. "got it", "read ya"
and several different phrases just don't stand out of a weak signal like
"QSL".

Granted, some people tend to over use "Q" abbreviations. It does
confuse
me somewhat when a person on a repeater with a fully quieting signal
uses "QRT" to indicate that they are clear.

QRZ, QSL and QSY are the only Q abbreviations I've used in weak signal
work.
I suppose someone out there will add one more important one(and after I

press [SEND] I'll think of another).

Q abbreviations are still used and needed. But granted,
some people like to use them as a "secret" code and thus over use them.

Simply, there ARE appropriate times for Q abbreviations, and there are
certainley
inappropriate times. But to simply dismiss them as useless, is
ignorant.

Buster KC7KMJ
6m, 2m, 70cm, 23cm terrestrial weak signal DM42

both
>coordinators? What Have I missed?

Thats the very question I was asking myself as I wrote the story --
which is a rewrite of the FCC press release. The FCC appears to

believe that marketplace forces will handle it all. I think its rediculuous -- but I can't say that in the newscast because it would be editorializing. I can say it here.

Maybe if you switched to Free Agent or some reader like that you'd be able to filter out the bodies of messages by simply downloading the headers first. You then only read threads that are more to your liking.

Hoping Netscape 4 will provide this type of feature.

Love,

Nit

ANARTS RTTY News Bulletin 948 02 March 1997

This is the Australian National Amateur Radio Teleprinter Society

with our weekly Rtty broadcast. We transmit on the following

frequencies and times :

3.545 MHz (Plus/minus 5) 0930 UTC VK2CTD (COL)

7.045 MHz -3 0030 UTC VK2CTD (COL)

14.070 MHz (amtor/fec) 0030 UTC VK2DPM (ALAN)

14.091 MHz 0030 UTC VK2DPM (ALAN

146.675 MHz 0030/0930 UTC VK2JPA (PAT)

144.850 MHz (ax25 bbs) VK2JPA AT VK2WI

146.675 MHz (rtty mmbbs/repeater) VK2RTY

INTERNET RADIO-INFO-DIST AT UCSD.EDU

Views expressed in this news bulletin are not necessarily

those of the Broadcast Officer, the Relay Officers, or of the

Society.

A.N.A.R.T.S. News Bulletin 948 02 March 1997

COLS COLUMN

THE CENTRAL COAST FIELD DAY IS, ALAS, OVER FOR ANOTHER YEAR.

NOW WE MUST RETURN TO BEING RADIO AMATEURS AGAIN, INSTEAD OF

HUNDREDS, NAY, THOUSANDS OF EXCITED LITTLE SCHOOLBOYS (AND

GIRLS), RUNNING AROUND THE WYONG RACECOURSE NOT KNOWING WHAT

TO LOOK AT NEXT!

FOR THE BENEFIT OF COUNTRY AND INTERSTATE AMATEURS WHO WERE

NOT ABLE TO ATTEND, HERE IS A SMALL PART OF WHAT WAS GOING ON.

FIRSTLY, ALL THE MAIN MANUFACTURERS WERE REPRESENTED IN ONE

WAY OR ANOTHER. ALL THE MAIN DEALERS AROUND SYDNEY AND SOME FROM A LONG WAY OFF WERE ALSO THERE. I SAW AT LEAST ONE FROM VICTORIA AND ONE FROM QUEENSLAND, BOTH HAD A CROWD OF PEOPLE AROUND THEIR STANDS.

SECONDLY, THERE WERE DOZENS AND DOZENS OF SMALL SELLERS, TRADING FROM ALL TYPES OF LOCATIONS, LIKE THE BACK OF THEIR CARS AND TRUCKS, LAID OUT ON THE GROUND, ON TABLES ETC. THESE WERE KNOWN AS THE FLEA MARKET.

THIRDLY, THE DISPOSAL ROOM HAD MANY MANY SMALL PRIVATE SELLERS DISPOSING OF THEIR UNWANTED EQUIPMENT.

FOURTHLY, THERE WERE MANY MANY ORGANISATIONS REPRESENTED. SUCH AS OURSELVES, ANARTS. THREE DIFFERENT AMATEUR TELEVISION ORGANISATIONS (THERE MAY HAVE BEEN MORE, BUT THATS THE NUMBER I COUNTED), PACKET RADIO, VINTAGE RADIO'S, MILITARY RADIO'S, QSL BUREAU, WIA, WICEN ETC. ETC. ETC.

ANOTHER GROUP WERE UPDATING INFORMATION OF THE OWNERS OF CALLSIGNS, KEEPING A HISTORY OF ALL THE CALLSIGNS THAT AN AMATEUR MAY HAVE HAD OVER THE YEARS, PLUS WHAT SORT OF WORK HE OR SHE DID. THERE WERE MANY OTHER THINGS HAPPENING, NOT LEAST THE COMPETITIONS TAKING PLACE.

FROM AN ANARTS POINT OF VIEW, I THINK WE HAD A GOOD DAY. THERE WERE

THREE OF US ON THE STAND, ALAN VK2DPM, JIM VK2BQS AND MYSELF VK2CTD. THIS ALLOWED US TO SEE SOME OF THE FIELD DAY DURING THE DAY. THIS YEAR, AS WELL AS A LIVE RTTY BROADCAST TAKING PLACE, ALL THE WAY FROM ONE END OF THE LONG TABLE TO THE OTHER, WE HAD A SLIDE SHOW USING THE POWERPOINT PROGRAM. THIS SHOWED VISITORS TO OUR STAND WHAT ANARTS IS ALL ABOUT AND MOST OF OUR ACTIVITIES. IT SHOWED OUR CURRENT COMMITTEE, A SLIDE REGARDING OUR MEETINGS AND ANOTHER SHOWING THE ANARTS RTTY BROADCAST TIMES AND FREQUENCIES. THE SLIDE SHOW SEEMED TO BE

WELL RECEIVED BUT I THINK IT NEEDS TO BE A LITTLE MORE EYE CATCHING FOR NEXT YEAR. WE SHALL HAVE TO WORK HARDER ON THAT.
JIM VK2BQS BROUGHT ALONG A DOZEN OR SO WEATHER MAPS THAT HE HAD RECEIVED ON AIR, THEY CREATED QUITE AN INTEREST.
I WAS SURPRISED AT THE NUMBER OF ENQUIRIES WE RECEIVED, ESPECIALLY FROM AMATEURS WHO SAID THEY DID NOT OWN A COMPUTER AT THIS TIME BUT WHAT EXACTLY DID THEY NEED TO GET STARTED.
OTHERS WANTED TO KNOW IF THEY COULD RECEIVE BOTH RTTY AND PACKET ON THE SAME MODEM. THIS OF COURSE WAS EASILY DEMONSTRATED. A SMALL GLIMMER OF HOPE FOR THE WORLD OF RTTY (INCLUDING ALL ITS VARIANTS, AMTOR, PACTOR ETC) WAS THE OPINIONS OF A FEW VISITORS WHO INDICATED THAT THEY COULD NOT REALLY HOLD A ONE TO ONE QSO ON PACKET.
TO EACH OF THESE I REPLIED THAT WE IN ANARTS WERE OF THE SAME OPINION, THAT WE LOVED USING PACKET, AND DO SO MOST DAYS TO SEND AND RECEIVE MESSAGES OR INFORMATION, BUT WHEN WE WANT TO TALK TO PEOPLE WE USE ONE OF THE OTHER DIGITAL MODES.
FINALLY IT WAS NICE TO SEE PEOPLE ONE KNEW, ALL IN THE SAME PLACE, JIM VK2BQS, ALAN VK2DPM, PAT VK2JPA, KEITH VK2ZZO, MATTHEW VK2YAP, TIM VK2ZTM, BARRY VK2AAB, TED VK2UK, BOB FROM LITHGOW VK2GQC, JOHN FROM ANNA BAY VK2BAT, FRANK VK2, RAY VK2GTR AND VK2TQ, JUST A FEW AMONG A CAST OF THOUSANDS.
WELL ITS OVER FOR ANOTHER YEAR, THE ONLY THING I MANAGED TO BUY WAS A POWER PACK FOR 2 DOLLARS, I MISSED OUT ON THE 1996 CALLBOOKS THAT WERE GOING FOR 2 DOLLARS. NEVER MIND, I MIGHT GET THE '97 BOOK NEXT YEAR. I BET NEXT YEARS FIELD DAY WILL BE JUST AS EXCITING, ALL OVER AGAIN.
THATS ALL FOR THIS WEEK, 73S FOR NOW DE COL VK2CTD.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(21 FEBRUARY - 27 FEBRUARY)

ISSUED ON 28 FEBRUARY 1997

SUMMARY

Date 21 22 23 24 25 26 27

10cm 73 74 75 75 74 74 74

A 11 8 10 8 8 16 (12 ESTIMATED)

T 25 -5 9 9 10 26 20

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH, W.A. WAS QUIET TO

UNSETTLED 21ST TO 24TH FEBRUARY; QUIET ON 25TH; UNSETTLED ON

26TH AND TO 1900 UT ON 27TH, THEN INCREASING TO MINOR STORM

LEVELS.

FREQUENCIES WERE NEAR MOSTLY NEAR PREDICTED MONTHLY VALUES

WITH SHORT ENHANCED PERIODS TO 30 PER CENT ON 21ST AND TO 15

PER CENT ON 26TH. FREQUENCIES WERE DEPRESSED TO 30 PER CENT

0000 TO 1500 UT ON 22ND. SPREAD F WAS PRESENT 1100 TO 1900 UT

ON 27TH.

FORECAST (28 FEBRUARY - 06 MARCH)

SOLAR: VERY LOW

GEOMAGNETIC: ACTIVE TO MINOR STORM CONDITIONS 28TH TO 2ND

MARCH, QUIET TO UNSETTLED FOR THE REMAINDER OF

THE PERIOD.

FREQUENCIES: ON 28TH TO 1ST MARCH, DEPRESSIONS OF UP TO 30 PER

CENT IN MUFS EXPECTED. NORMAL CONDITIONS

EXPECTED FOR THE REST OF THE PERIOD.

Notes of Interest

Although no spots were reported the following stations have

been reported: 7Q7EH is active on 20 and 15 qsl via AA9HD,

9N1RHM on RTTY qsl via KV5V, 9Q5PA, for 15 months, qsl to

Frank Patris, c/o American Embassy Kinshasa, Unit 31550, APO 09828 USA.

BS7H, Scarborough Reef, the Chinese Radio Sport Assoc, (CRSA) has announced plans for their 3rd dxpedition to Huang Yan Dao (Scarborough Reef) leaving mainland China April 28 for a one week operation commencing on April 30, using the call BS7H AND RTTY WILL BE INCLUDED. QSL to JA1BK.

As reported by WS7I, as MC of the Dayton Saturday RTTY Banquet, the guest speaker will be Al Hernandez, K3VN, (ex-WA3YVN), a member of the very successful VK0IR Heard Island DXpedition.

For those interested in 10 Mhz RTTY, S79MAD, Paddy, would like to try that band starting next week. His antenna on 10 mhz works very well and hopefully will enable those who still need him another opportunity on a different band.

The RTTY Notes can continue to provide the latest information on RTTY activity by readers active participation. Be part of the notes and be recognized by sending next weeks bandpass and Notes of Interest to Luciano:

ARLD010 DX news -- EXCERPTS

This week's bulletin was made possible with info provided by The 599Rpt, Tedd, KB8NW, the OPDX Bulletin, the DXNS, Bill, WT4K, and Contest Corral from QST. Thanks to all.

NEPAL, 9N. Rich, 9N1RHM, is QRV on CW and RTTY on most HF bands. QSL via KV5V.

DJIBOUTI, J2. Dominique, F5RYC, is reported to be heading back here and will be QRV as J28YC. QSL via F6EJI.

WAKE ISLAND, KH9. KC7FWZ/KH9 has been QRV on 10107 kHz at 0810 UTC. The length of his stay, and his QSL route, are unknown at this time.

Ohio/Penn DX Cluster

DX Bulletin No. 293 -- EXCERPTS

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, KA2AE, NG3K, N4GN, WT4K, DJ5AV & DX News Letter, DL4VBP, G4BUE & DX News Sheets, HP2CWB, LA1K, LA4YW, LU1DZ, PA3CQR, PS7AB, PS7KM and SP2FOV for the following DX information.

4S, SRI LANKA. The 'DX News Sheets' states to look for Mario, HB9BRM, to be active from March 3rd to May 30th, or possibly longer as 4S7BRG. QSL via bureau only.

A3, TONGA. Ulmar/DK1CE, Hilde/DL5UF and Bert/DF5WA will be active from now until March 10th. During their stay, they would like to try to activate the following IOTA's: OC-049, OC-064, OC-164 (no further description given). Operation will be on CW/SSB/RTTY. Their equipment consists of a TS-690AT, IC-735 and a Yeasu FL-2100Z amplifier. Antennas consist of a FD4, R5 and some dipoles.

BS7H, 1997 DXPEDITION TO HUANG YAN DAO (Scarborough Reef). The following is an excerpt of the anticipated official announcement that was released by Tim Totten, N4GN, on February 16, 1997.

The Chinese Radio Sports Association (CRSA) has today announced plans for the third DXpedition to Huang Yan Dao, located in the South China Sea. A multinational team, led by BZ1OK and JA1BK..... expected to commence the one-week operation from Huang Yan Dao on Wednesday, April 30th, using the call sign BS7H. The primary goal ..... is to provide at

least one QSO with as many individual DXers as possible. For this reason, the operators will concentrate on those regions having the most difficult propagation paths (e.g., the eastern half of the U.S.), giving DXers in every corner of the globe the best possible chance to make it in the log.

A secondary goal will be to provide QSOs on additional bands and modes, including 160 through 6 meters, CW, SSB, satellite and RTTY, with as many as four stations simultaneously on the air.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD at VKWI2, or the Secretary (Pat) VK2JPA at VK2WI.

Email addresses :

Broadcast officer patl@pitt.conmusic.su.oz.au

or patl@extro.ucc.su.oz.au

President colin.davies@dse.com.au

or cdavies@sunink.com

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking for-ward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer

Be glad they are on the nets. There must be at least 500 hams on those nets at a given time. Imagine what a mess if they quit the nets and started calling CQ.:-)

I can see that beeing a "HAM" has become a clique or fraternity and less a service, or as ARRL indicates, a league. The "If you can't or will not pass the all mighty 'code' initiation, you can be a Amature Radio Operator, but you won't be a 'Ham'" has become the rule and not the exception.
I enjoy HF SSB very much, and I submit that most 11Meter (or should I have said 27Mhz, for those who do not recognize it has a useful band) SSB operators are very courtious and do have no interest in the AM'er way of life, but are gun-shy of the Holier than thou attitued of the "HAM".
We must also look at the "value added" side of CW. Sure it is a part of history, a legacy, but so is the Dodo bird, steam locomotive, and the TRS-80! Technology and society have prgressed beyond them. Does CW have to be a requirement to operate in the HF spectrum? Why? What "value added" does it provide, except to try and weed out more of the "undesireables", those "persona non grata" from the 11 Meter (oops I did it agian) band.
Just look at history, people have always "pushed the envelope" and that is one of the reasons that has made America strong. Even with that in mind, there has always been, and will always be, those opposed to change and progress. For these people there is no hope. Time has and will continue to pass them by.

Lets not keep traditions for traditions sake.

Clifford W. Owen

Message-ID: <5feo21$e5n@news.innet.com>
Source record: 203198

I have been using the Heil Pro Micro with the HC-4 DX cartridge. I used it in the ARRL DX sideband contest this weekend. It worked well. You will need a connecting cable for your radio and a PTT of some sort, neither very hard to make. I paid $99 for the headset from Ham Radio Outlet. I've talked to hams who have been using Heil headsets for years. I'm hoping I get the same length of time from it, hi hi.

Tony

5064. Re: Q SINGNALS Sidebanders

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-03 00:00:00 UTC
From: kludge@netcom.com
Message-ID: <kludgeE6H26A.7sJ@netcom.com>
Source record: 203199
Cross-posted to: rec.radio.cb,rec.radio.noncomm,rec.radio.amateur.misc,rec.radio.swap

Someone reading this on a CB newsgroup says:

>> Q-signals are unnecessary. Q-signals were invented for brevity because
>> people were in a hurry or were paying for a service. We are not paying for
>> air time over the CB.
>>
>> Please, every day ENGLISH is OK and preferred.

Then someone reading it on a ham group says:

>Q abbreviations are still used and needed. But granted,
>some people like to use them as a "secret" code and thus over use them.
>
>Simply, there ARE appropriate times for Q abbreviations, and there are
>certainley
>inappropriate times. But to simply dismiss them as useless, is
>ignorant.

Now, see, people aren't reading the newsgroups line here. Both of these statements are true, for the services that they are referring to. Now, I am reading this on a group intended for discussion of noncommercial FM broadcasting. If I announced the studio QTH during the morning jazz show, people would call in and ask what i was talking about.

)If criticism is a flame, then this must be a flower)

I wanted to throw in a comment that I have purchased another item that Mike had listed on the group and when he says like new he means it, I got an item that is probably 3 years old and found it to be pretty much like the day he broke the seal on the box. The guy takes nice care of his toys! He ships promptly and knows how to package things up to protect from the UPS boxbusters. All in all a very good transaction. Nothing to be afraid of here!

5066. Paintball and Amateur Radio

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-03 00:00:00 UTC
From: natel@omnifest.uwm.edu
Message-ID: <5feue6$usj@omnifest.uwm.edu>
Source record: 203201

Hi, all.

Several of my friends and I are hams and we all enjoy the sport of Paintball. I was just wondering if anybody has used amateur radio as a type of "battle communications" in paintball. Have you had any success with it?

OH, and the use of handheld CBs probably isn't very good for paintball because many paintball players now use CBs. I figure it would be a lot better to use amatuer radio because of the possibilities of two-frequency half-duplex CTCSS communication. This would keep the battle communications a lot more secure and an ambush would be a lot less likely. (Most paintball players don't carry scanners or duel-band HTs with them while they play).

Thanks! 73s

Nate, N0PCL

>

And during the last contest I heard someone from the Century Club repeatedly warning those who dared to come near 7233.5 that they were "transmitting on a net frequency." Never that the frequency was in use, but that it was a "net frequency." I think that mentality is indicative of a problem.

> (General Radiotelephone) N2RUQ (Amateur) jedana@@worldnet.att.net

"5x5" comes from the operating signals QSA and QRK.

Signal Strength: QSA 5 = Strong
Readability: QRK 5 = Perfectly readable

Translated = "loud and clear"

From: markv@pixar.com
Message-ID: <5ff8mi$i3b@pixar.com>
Source record: 203205

Well, I returned from a swap meet with a Drake 2B in functional condition.
I have verified it works by hooking up a random wire antenna (probably only
about 30 feet long) and no ground, I was able to pick up a couple of stations
on 80m and 40m, but the performance was far from stellar.

The problem is I am stuck in an apartment, (the middle of three floors :/)
and outdoor antennas are verboten. Also, their ain't a metal pipe to be had
as a ground connection (all PVC plumbing). Anybody got some good ideas as
to indoor antenna/ground solutions for us poor apartment dwellers?

I'd be interested in exchanging some email with anyone who knows stuff about
the Drake 2B as well, I am a relative newbie.

Jeff,

This is a good effort and I hope you see the project through. I guess you have noticed however that it is almost impossible to post anything to the Amateur Radio newsgroups without the subject matter being transformed into the code - no code debate. I can not believe just how much this issue has split the ham radio community. Much worse than incentive licensing over 30 years ago.

best of luck to you and let me know if you ever publish as I would like to purchase.

As I said before, if those who complained about learning it would take the time they spend complaing learning the code, they would have it a couple weeks. As the other said..."Learn it and get on with your life"

Too tough for kids?
Last month had a 12 year old get his general here in KY.
And have several teens working on code in our class now for their
Tech+.
The test are fairly easy for Tech. now. A typical teenager can
study the material for several days and pass it. And they enjoy
code as well. Just like anyone else, they need help getting started
and some tutoring by skilled code operators.
When we have someone having problems with copying code in our class
I have them work with our "CODE Coach". She has been able to get most
students past their own personal barriers to learning code.
I know many won't like what I'm about to say. However, being "tone deaf"
has nothing to do with copying code. I really don't care if a person can
carry a tune or play music by ear or whatever. Usually, a person can't copy
code due to his/her own personal barriers. Usually it is just because they
have not been trained properly and sometimes it takes some adjustments in
the training method. But, here again it is a matter of training.
To do it right it takes a person on a code practice oscillator and key that
interacts with the student and not just listening to tapes or a computer.
People tend to pick up bad habits such as listing for dits and dahs and not
learning to listen for the sounds that they make together to form a letter.

In my case my interest was sparked in the The early 60s when my parents gave me a 6 transister AM broadcast band radio for Christmas one year and I found out that I could receive stations much further away than the local Philadelphia area stations that my parents listened to.I was amazed to be able to pull in Atlanta, Chicago, St. Louis, Cincinatti, Boston, and New York.
My weekly allowance of $1 went for batteries and nothing else.

My father noticed my fascination with this and told me how he had tried to become an ham operator in the mid or late 30s, but how he could never learn the code. I did not understand any of this and he explained to me what Amateur Radio was all about and how you needed a license to get on the air. He also showed me some QSL cards that he received from hams all over the country. It turned out that he had been an avid SWL and sent reception reports to many hams. One Saturday afternoon he brought home a Hammarlund Comet Pro receiver which had been stored at his mothers house.

He showed me how to string up a simple antenna and we proceeded to fire up the Comet Pro which had not been used, he said, since 1946 right after he returned from WW2 and right before he married. Fortunately, it worked. This was a receiver where you had to change coils to change bands, and he had a complete set. We tuned over what turned out to be the 40 and 75 meter bands. Most everything in the early 60s was still AM and I began to listen to mystical voices coming into my bedroom during the afternoons after school. Most of the guys on were regulars and I felt that I got to know them personally. It seems like every month now when I read over the Silent Keys section of QST I see some of the old familiar 40 and 75 meter calls of almost 35 years ago.

My father located an old callbook and I began to send out SWL reports and got back a lot of QSLs plus a lot of encouragement to take the next step and learn the code so I could become licensed as a Novice. By then I had a copy of the License Manual and my father's old code oscillator... more like a buzzer, and his old navy straight key. I was going to learn the code, and by myself. My mother often told me that I was doing code in my sleep. It turned out that one of the boys in my boy scout troop had a father who was a first class radio telegraph operator in the Merchant Marine... and he was empowered to give me the Novice test. They never told you your grade back then, but in the winter of 1964 I received the call WN3DNC.

As a reward for passing the Novice exam my father purchased for me a Hallicrafters SX-110 receiver and the Comet Pro was retired.I still have the Comet Pro and the navy key. I had saved enough money from my paper route to buy a Heathkit DX-40 transmitter and some coaxial cable to feed a 40 meter dipole that was strung between our roof and a willow tree in the back yard. I think that the highest point of the antenna was no more than 18 feet.In those days I did not know anything about how to tune up a transmitter and nothing about antenna theory. I tried to tune up on the 80 meter Novice CW band and called CQ off and on for over a week without any results. It seemed that I had actually tuned up just outside the 40 meter band and was radiating a nice signal which was confirmed by an ARRL Official Observer's report from Missouri. This was my first " QSL" and I still have it.

5079. POLL ON FORMING A SCI-FI NET

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-03 00:00:00 UTC
From: godzilla@panix.com
Message-ID: <5ffc0c$1fg@panix3.panix.com>
Source record: 203214
Cross-posted to: rec.radio.amateur.dx,rec.radio.shortwave,rec.radio.amateur.misc,aus.radio,uk.radio.amateur

For quite some time now, there has been local discussion (in the NYC area), on starting a science fiction discussion net on HF, on either the 20m or 40m band (somewhere in the General portion). I suggest that it be twice a month, but a time has not been arrived at yet.

There are too many nets on weekends as is, so I would like to suggest that such a net be during the week around 0100Z or 0200Z. I realize at this time, due to propogation, that that time may not be great for certain parts of the world, but if we start the net soon, and get interest going, then eventually, as propagation works its way back up, net participation will increase.

The net's purpose will be to discuss past and present sci-fi television programmes and films. On occasion, we can run a trivia contest, or, sponsor special event station to commemorate anniversaries of certain films/programs, which can be fun.

To start things off, a bunch of hams here in NYC have created the Monster Island Amateur Radio Society, to commemorate over 40 years of Japanese science-fiction films. The Society has the unofficial call of 1MI0HQ, anyone genuinely interested in Godzilla, Gamera, etc. may "join". There are no dues, but anyone wishing to donate a couple of dollars here or there towards the printing of special QSLs that are being designed may do so.

The whole idea of starting a sci-fi net is TO HAVE FUN and TO SHARE INTEREST IN SCIENCE FICTION (including your favorite authors) AROUND THE WORLD!! That's it!!!

If we are to start such a net, we'll need worldwide net control stations, people willing to be there at whatever time and day we finally decide to run the net on.

Interested in the net? Interested in the Monster Island Amateur Radio Society? Let me know directly at GODZILLA@PANIX.COM. Thanks and 73 to all.

How can you buy an airline ticket from travel agent A while I buy a
ticket from travel agent B and not get us both booked for the same seat?
The answer is a transaction based online database accessable by all
travel agents. The same can be applied to frequency coordination. It will
be necessary for the coordinatiors to subscribe to a transaction
processing system to avoid conflicts.

Gary

I used this setup for a year. For DX work it stinks. The frequency response of the RS microphone element is just about the opposite of what's needed. I opened up the mike holder a bit with a Dremel tool and put a Heil element in. This was a major improvement but I ended up spending close to the price of the cheaper Heil boom mike/headphone setup.

If I had it to do over again:

Get a used set of headphones at a yard sale and a $24 Heil HC4 mike element from AES. Hot glue the mike element to a piece of stiff wire like #10 THHN that can be bent around to suit and then glue it to the headphones.

Before you laugh, a similar setup to this has been used by one of the top contesters in the USA, K6LL.

Regards,
Pete

Amateur Radio: Elmers List Subject Quick-Search Index

(Note: This index is not necessarily all-inclusive and some Elmers are
listed more than once.)

10-X INTERNATIONAL

* Cebik (Mailing List and WWW Page)

AMATEUR RADIO EMERGENCY SERVICE (ARES)/RADIO AMATEUR CIVIL EMERGENCY SERVICE
(RACES)/SKYWARN

* Adams, I (ARES and SKYWARN)
* Ammar
* Avnet (Fountain Valley, CA RACES)
* Ayers (RACES and SKYWARN)
* Boccardi (ARES/RACES/SKYWARN)
* Brown (Collier County, FL ARES EC)
* Buck (Hawaii)
* Butler
* Choate
* Czaikowski (ARES, former VA RACES Radio Officer)
* Glago (Sonoma Valley, CA ARES and RACES Director)
* Gray (Arkansas Section)
* Humphries (ex-Asst. EC)
* Ihry (ARES/RACES/SKYWARN)
* Johansen (ARES)
* Johnson, D (RACES and SKYWARN)
* Knauer (ARES and SKYWARN, including National SKYWARN WWW Page)
* Kruml (City of Redmond, WA RACES Radio Officer and Community
Disaster Educator, EComm Pacific Northwest ARES Internet Mailing
List)
* Lao (Philippines)
* Mello (SKYWARN)
* Miller, D (Ventura County, CA ARES Area 6 Packet Radio Training
Group and WWW Page)
* Mills (SKYWARN)

* Moell, A (Hospital Disaster Support Communications System and WWW Page)
* Morgan (ARES and SKYWARN)
* Morris (ARES)
* Neeson
* Neff
* Nickolaus (Dakota County, NE EC, Siouxland area SKYWARN spotter network)
* Paperman (ARES TX DEC)
* Patton (Commanche, TX, ARES EC and RACES EC, SKYWARN)
* Richardson, W (ARES/RACES)
* Riddell (Kentucky)
* Rodriguez (ARES/RACES, Mexico)
* Rymell (Assistant EC, Radio Officer and Chairman of Operations Committee for Lycoming County ARES/RACES/SKYWARN)
* Schwartz (NYC EC for Operations)
* Shelton
* Smith (ARES and SKYWARN)
* Sohl, R (ARES/RACES)
* Stader (EMAS SEC)
* Winchell (ARESMAT Team Captain, RACES Team Leader, and SKYWARN NCS)

AMATEUR SATELLITE CORPORATION (AMSAT)

* Bauer (VP for Manned Space Activites, Chief Member of SAREX Working Group, NASA/SAREX WWW Page)
* Boudda (Morocco)
* Di Mattia (Italy)
* Galazka
* Gunton
* Johnson, C
* Lee (Korea)
* Marchant
* Roth (Portland, OR Area Coordinator)
* Sohl, R
* Williamson, P (WWW Page, Anonymous FTP Archive, and Mailing Lists)

AMATEUR TELEPRINTER OVER RADIO (AMTOR)/PACKET TELEPRINTER OVER RADIO (PACTOR)/RADIO TELETYPE (RTTY)

* Bernstein
* Butler
* Di Mattia
* Leavey (73 Magazine RTTY Loop Column and WWW Page)
* Neeson
* Nickolaus (RTTY)
* Reynolds (FSK, PSK, MSK, Various Types of ARQ and FEC Systems)
* Richardson, H
* Sayer (also decoding CHU's ASCII time code)
* Short (BitBucket Specialized Techniques Mailing List)

* Sohl, R (AMTOR)
* Sussman (Publisher of PACTOR News WWW Page, Speaker and Host of PACTOR Forum at Dayton Hamvention)

AMERICA ON-LINE

* Ruh (ATV Quarterly Representative, Ham Radio Manufacturers and Dealers Section)
* Stader (Host and Manager, Ham Radio Club Forum)

AMERICAN RADIO RELAY LEAGUE (ARRL) FIELD ORGANIZATION

* Brakob (Dakota Division Vice Director)
* Brown (Collier County, FL EC)
* Cebik (Educational Advisor)
* Cira (Los Angeles, CA ACC)
* Coffee (CA PIO and TS)
* Czaikowski (OES, Former OO/AA and VA SEC)
* Ehrlich (EMAS Internetworking ASM)
* Goldstein (Volunteer Counsel - Florida Only)
* Halle (Phoenix, AZ Area Official Observer Coordinator)
* Hill (TN TS)
* Kruml (Northeast King County, WA EC)
* Nickolaus (Dakota County, NE EC and OBS)
* Paperman (TX DEC)
* Patton (Commanche, TX EC)
* Redding, T (Educational Advisor)
* Rymell (Lycoming County, PA Asst. EC)
* Sefranek (EMAS TA)
* Sohl, B (NJ Local Govt. Liason)
* Sohl, R (TX TS)
* Stader (EMAS ASM and SEC)
* Turner (Volunteer Counsel)
* Winchell (Asst. SEC, Education)
* Winkler (Arizona PIC)

AMERICAN RADIO RELAY LEAGUE (ARRL) HEADQUARTERS STAFF

* Bloom (HQ Webmaster, QEX Editor, ARRL CNC Contact)
* Carcia (W1AW Station Manager, ARRL Bulletin Mailing List)
* Hare (Laboratory Manager)
* Jahnke (VEC Manager)
* Lau (Technical Consultant)
* Tracy (InfoServer Sysop, TIS Coordinator)

AMIGA PERSONAL COMPUTER

* Leadmon (Amiga NOS FTP Archive)
* Morris
* Pozzi (Argentina)
* Whatton (Manager, Amiga Amateur Radio User Group and WWW Page)

ANTENNAS

* Anthony
* Ayers
* Boudda (HF)
* Brakob
* Brewer (wire HF)
* Brooks (HF to Microwave)
* Brubaker (HF/Wire/Beams/Yagis)
* Buck
* Butler
* Cebik
* Chahine
* Cieslak, C
* Coffee (HF/VHF/UHF/Beams/Yagis)
* Coyle (multi-band wire HF)
* Croce
* Czaikowski
* Danaher (HF)
* DePolo (Design/Theory)
* Di Mattia
* Elmore
* Galazka
* Gray
* Gunton (Microwave)
* Halbert (simple HF Wire)
* Hall, M
* Hamilton (HF/Computer Simulation and Design)
* Harris
* Henzel
* Hill (Mobile, including HF)
* Humphries (VHF and Multi-Band Wire)
* Ihry
* Johnson, D
* Mello (HF/VHF/UHF/Wire/Mobile)
* Miller, T (HF/VHF/UHF/Microwave/Wire/Beams/Yagis/Dishes)
* Morris
* Mouw
* Muenzler
* Naumann
* Neeson
* Ornitz (Corrosion Protection)
* Petri (VHF)
* Placer
* Preston
* Redding, J (VHF/UHF)
* Reeves (Wire)
* Reynolds (including HF)
* Rosenfeld (including HF Wire Dipoles)
* Rymell (MF/HF/VHF/Wire/Beams/Yagis/Mobile)
* Salnick (HF/VHF/Wire/Mobile)
* Salyzyn
* Sarrio

* Schumacher (VHF/UHF/Beams/Yagis/Mobile)
* Sefranek (and Transmission Lines)
* Shelton (Wire)
* Silva
* Smith (including Homebrew)
* Sohl, R
* Standerfer
* Stanley
* Stocking (HF/Wire)
* Stockton
* Taylor
* Thornton (Tactical/Field-Expedient Short and Long-Haul HF)
* van de Kerk (HF Low-Profile)
* Veach
* Warth
* Winchell (and Feedlines)
* Zurn (wire HF)

ANTIQUE AND OLDER EQUIPMENT/BOATANCHORS

* Anthony
* Avery (including AWA)
* Ayers
* Bellville
* Brewer (40's-70's and WWW Page)
* Butler
* Croce
* Dean
* Drechsel (Collins Radio Virtual Museum WWW Page)
* Eisenberg
* Hamilton
* Harris
* Hill (Mailing List)
* Hockaday
* Keys (including HF and CW)
* McEwen (Telegraph Key Collectors and Historians WWW Page)
* Mello
* Miller, T
* Morris
* Muncey (Terry Muncey dba Radio Era Schematics and Documentation Archives)
* Orcutt
* Ornitz (Cleaning and Refurbishing Chemistry and Safety)
* Paperman (Manuals, Service Information, and Literature)
* Petri (Tube Type Radios)
* Richardson, W
* Rippel (Secretary, Collins Collectors Association, Collins Mailing List)
* Rymell
* Sohl, R
* Standerfer

* Stanley
* Turner (including Kenwood and Ten-Tec)

ANTIQUE WIRELESS ASSOCIATION (AWA)

* Avery
* Orcutt

APPLE MACINTOSH COMPUTER

* Avery
* Been
* Bellville
* Boccardi
* Buydens
* Danaher
* Greatorex (including Amateur Radio Software FTP Archive)
* Luszcz (Shareware, including MacMultiMeter)
* Marchant
* Mills

Amateur Radio: Elmers List Info and Administrivia

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via the Internet. Any other uses, please E-mail for permission.

Table of Contents

* Elmers List Formatting Standards
* A Brief Historical Overview
* What is an Elmer?
* What is an Elmer Today?
* What is an Internet Elmer?
* How may I obtain the latest copy of the Elmers List?
* How may I contribute to the Elmers List?

Elmers List Formatting Standards

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I

really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software or "browsers".

For more information about URL formats, see:

http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

What is an Elmer?

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the

novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer Today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages or FTP archives, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

As part of the Elmers List's entry into the World-Wide Web, I've also provided a formatted WWW Registration Form. It may be accessed from:

http://www.novia.net/~pschleck/elmers/register.html

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message when posted to Usenet News). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use the Mailing-List or Mail-Server options:

World-Wide Web (WWW):

This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:

* http://www.novia.net/~pschleck/elmers/
* http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
* http://www.cs.ruu.nl/cgi-bin/faqwais *

(Note: Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)

Usenet News:

This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with the Subjects of "Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*]," and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

* news:rec.radio.amateur.misc
* news:rec.radio.info
* news:rec.answers
* news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

Anonymous FTP:

If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

* ftp://ftp.novia.net/customers/pschleck/elmers/
* ftp://ftp.cs.buffalo.edu/pub/ham-radio/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

Internet Gopher:

The latest copy of the list should be available from the following Gopher sites:

* gopher://jupiter.sun.csd.unb.ca/
* gopher://gopher.univ-lyon1.fr/
* gopher://ftp.win.tue.nl/
* gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

Mailing-List:

Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:
subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

Mail-Server:

If you don't want to read through the entire gateway of
rec.radio.info, or want a copy of the list right away, send E-mail to:

ftpmail@ftp.novia.net

and in the BODY (not the Subject) of the message, write:

```
open
get /customers/pschleck/elmers/admin
get /customers/pschleck/elmers/index/subject
get /customers/pschleck/elmers/index/geographic
get /customers/pschleck/elmers/list/part1
get /customers/pschleck/elmers/list/part2
get /customers/pschleck/elmers/list/part3
get /customers/pschleck/elmers/list/part4
get /customers/pschleck/elmers/list/part5
get /customers/pschleck/elmers/diff
```

Alternatively, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

```
send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index/subject
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/list/part5
send usenet/news.answers/radio/ham-radio/elmers/diff
```

and the latest copy of the list should be sent to you E-mail within 24
hours (the mail-server uses batch priority to reduce system demand).

How may I contribute to the Elmers List?

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

JPS Communications, Inc.

For those interested, JPS Communications, makers of DSP noise filters
and other radio-related products, has a page on the WWW. The URL is:

http://emporium.turnpike.net/J/JPS/jps.html

Also, I'm in the process of collecting links to pages relating to uses
of DSP in amateur radio. If you know of some, I'd appreciate hearing
about them. There are a lot of people experimenting with new
modulation schemes, voice compression, noise reduction, DSP IF
techniques, and lots of other interesting applications. I'm planning
to add a page with links to this information, so keep an eye out for
it, and if you have something to share, please drop me a line.

I am especially interested in VHF/UHF and microwave amateur bands as
well as Amateur television. I am treasurer and a founding member of
the newly-formed Triangle Amateur Television Association in
Raleigh-Durham- Chapel Hill, NC. I am willing to share my expertise in
the following areas:

* ATV - Getting started, starting local activity, repeaters.
* VHF/UHF - Propagation, what you need to get started, operating
portable, contesting, weak signals, and DX.
* Sealed Lead Acid Batteries - How to take care of them.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* RF Exposure Safety/Regulations
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111, USA. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111, USA. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

See Cheyenne Greatorex's entry for information about the ARRL Anonymous FTP Archive and Jon Bloom's entry for information about the ARRL World-Wide Web Home Page.

* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to homebrewing tube transmitters and receivers ("Glowbugs," a sort of intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@theporch.com (*)
* rra-wg@theporch.com
* glowbugs@theporch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

I am 36 years old, have been a ham for 22 years, and currently hold an Extra class amateur license. I got my first ticket when I was 14 years old, thanks to my Elmer who is now a silent key.

I am an instructor for amateur radio classes, Novice through General, and teach CW at least once per year. I am also the VE team liaison for the TEARA VE team, and test monthly in Smithfield, NC.

I maintain a number of repeaters from 10 meters through 900 MHz including ATV. I build a lot, and enjoy restoration/construction of vacuum tube amateur gear.

I enjoy ragchewing and DXing, with about 75% of my operating time on HF spent on CW. I also enjoy weak signal and FM operation on 6, 2, 1.25m, 70cm, and 33cm. I am experimenting on 23cm and 10 GHz.

I maintain a number of sites, some of which are related to amateur radio. The URLs are:

I am an Advanced class operator, working on Extra. I work professionally as a manager of a computer services department in a large hospital system with more than 12 years experience in PC and Host Systems networking, I hold a degree in Electronics Engineering, as well as many hours in Computer Science Engineering. I operated a land-line BBS for 8 years, and now maintain a packet mail drop on 145.01 MHz. I maintain the TriCounty Amateur Radio Club (TCARC) of North Texas home page on the web:

http://www.why.net/home/kb5ylg/tcarc/index.html

and am the 1996 President of the TCARC. I am also the appointed Emergency Coordinator for the City of Azle for Tarrant County RACES.

I like to give talks to Amateur Radio Clubs, school groups, Scouts, and similar groups, mainly about Amateur Radio topics. Recent presentations I have done include Field Day preparation for clubs, Computers and Ham Radio, Building Your First Dipole. I'm open to presenting other topics as well. I also help local amateurs to prepare their own presentations and talks.

I am a Baptist minister, and would be delighted to administer a Ham Radio theme wedding! <grin> I would also provide ministerial services for Ham related special events.

I will also provide free Novice/Tech licensing instruction for groups of 5 or more in the Tarrant/Parker/Wise County region of North Texas. Typically this involves about 18 hours of lecture, and some self study on the parts of the students. I'll do this free for nonprofit endeavors.

P.S. I monitor 146.98 Boyd repeater while commuting, and you might find me working HF CW just about any time.

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://www.qualcomm.com/people/pkarn/

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature
phase shift keyed) modem for the amateur satellite channel. This modem
is implemented totally in software running on a PC with an ordinary
(non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB
transceiver bandwidth.

I've made good progress and have put some info up on my web page about
it, including an audio file to show what it sounds like in noise when
the signal is still copyable, available from:

http://www.qualcomm.com/people/pkarn/ham.html

Watch that page for an announcement of when I actually release the
code, which I plan to integrate into KA9Q NOS.

Spread Spectrum

I've been trying to answer the question of consequences of promoting
relatively wide-band digital modes on band occupancy and throughput
(i.e., What gets optimized? Are there tradeoffs in quality vs.
quantity?) in the context of the spread spectrum rules debate, but I
think it needs to be a much wider discussion. See my reply comments to
the FCC on this issue:

http://www.qualcomm.com/people/pkarn/papers/mysscomments.html

(See also Steve Bible for more information on Spread Spectrum)

[Editor's Note: I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

Paul Keezer NX1P

logview@keez.tiac.net

Finally a WWW page has been set up for HamView products, a Windows based Ham Radio program. This page can now be located at:

http://www.tiac.net/users/pkeezer/hamview/

There is an upgrade file right now for Win95, but the bug has only been corrected in Logview 5.0. Come and check us out.

Michael S. Keller AB5EL

rdkeys@csemail.cropsci.ncsu.edu

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing your way to hamdom, the cheapskate's approach, let me know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS Friday Night Fist Function

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq:
80 meters --- 3702.5 kHz for all hands.
40 meters --- 7102.5 kHz alternate, for all hands
(between the heterodynes, someone scout out a better QRG)

Standard calling signal:
CWIST IMI DE <yourcall> K (if there are no control stations calling for you to check in), or, CWIST DE <yourcall> K (if there is a control station inviting checkins) (The alternative check in for those OTs with salt behind the ears is a simple DE to get the control station's ears followed by DE <yourcall> K when the control station acknowledges.)

Note:
A simple informal net style protocol will generally be used, unless no control station assumes control for the evening, in which case it is an open roundtable format discussion group.

Note:
The midnight local time gathering is designed to maximize the number of checkins spread out over the world, so less confusion and more checkins are heard. The hope is that someone will be aboard almost anywhere and be heard at least locally, anywhere in the world.

Definition:
A CWIST is a person with an active interest in the PRACTICE and USE of continuous wave radiotelegraphy as directly is applicable to amateur radio. Such PRACTICE and USE may take the form of learning about radiotelegraphy and its history in amateur/commercial areas, its application to radio telecommunication, the practicing of the art and craft of radiotelegraphy, and the refining and developing of the technology of radiotelegraphy.

Author of NA4G's National Electrical Code for Hams

ABSTRACT

This work was presented as a talk to the Homebrew Special Interest Group (HB-SIG) of the Raleigh Amateur Radio Society (RARS), on 15 January, 1991 and was revised for another presentation on 26 January, 1994.

This document contains excerpts of the National Electrical Code (NFPA 70-1990) that, in the author's opinion, apply to the installation of amateur radio equipment as would commonly be found in most amateur radio stations. Direct excerpts from the Code are contained within inset

quotations. Paraphrased excerpts from the Code are
itemized. The author's interpretation and discussion of the
Code is set full-width. The author's interpretation and
discussion of various sections of the Code is not meant to
be all-encompassing, nor the official interpretation of the
National Fire Protection Association, nor of any official
governing body having legal authority of jurisdiction over
electrical installations, but is meant to be used as a
teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one'
both in tar-compress (862K, for UNIX jocks) and PKZIP 2.04g (732K, for
MS-DOS users) formats. Both are available from:

ftp://sunsite.unc.edu/pub/academic/agriculture/agronomy/ham/things-to-
build/na4g/

Author of the QRZ! Ham Radio CDROM

I am interested in receiving amateur-radio-related public-domain
and/or shareware programs, data bfiles, frequency lists, etc., that
would make a useful edition to the QRZ! CDROM. Can help arrange volume
discounts for clubs and groups, and will donate copies of QRZ! to
qualifying non-profit organizations. Send E-mail or call +1 602
483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours
a day. Our connection is via a T1 line so you should get pretty decent
file transfer times.

We've got about 7,000 files online, including radio mods, software,
most everything imaginable. We are also accepting uploads of all ham

radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous ftp server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

Luther M. Lord N4DA

n4da@mindspring.com

If you need a good place to get your amateur radio repaired, I can help. Visit the Radio Doctor's home page at:

http://www.mindspring.com/~n4da/top.html

I will answer all technical questions received via E-Mail at my
address above. This service is offered presently at no charge.

>Repeating this isn't likely to make it true.

Look into your state university's drive to "dumb down" their calculus sequence; it's a national movement. So many kids are failing the college algebra, trig, and calculus, that rather than requiring qualified and competent grade school and high school teachers, they're weakening the college curriculum.

This national trend is called "Calculus Reform." Read the AMS NOTICES for the last few years for proof.

>My 6th grade daughter will
>most likely be starting Algebra in 7th grade. When I was
>in junior high, Algebra wasn't an option until 8th grade. There
>are 6th graders in our local elementary school that have covered
>a great deal of first year algebra already.

Too bad the people teaching don't have math degrees. More than likely they couldn't pass their university's math classes so they opted for the weaker Education Degree. Their lack of math knowledge is passed on to their students. Teaching math for UH for the last 10 years has enabled me to make the conclusion that the high schools and grade schools are passing students who would have been held back decades ago.

>Enough with this dumbing down crap. If your schools are dumbing
>down, fix them. But please don't expect the rest of us
>to accept your assessment of our kids' education.

Let me know how your kid does in calculus when she gets to college. She's being given a false sense of security. So many of my past students have said "But I got A's in math in high school - how could I be failing your trigonometry class?"

The national standards have dropped over the decades: "Giving students failing grades will hurt their self-esteem in the long run so we must consider adjusting our current standards...."

One of the Univ. of Calif. campuses did away with the F-grade during the 80s.

Nauseating.

Our community colleges are now offering remedial reading, writing, and math classes. I'm currently teaching a class at a UH community college which consists of grade-school math (adding fractions with different denominators and such). You may not believe the "dumbing down crap" but that doesn't make it go away, Todd.

>> Kids opinions are formed from what they hear from adults. If you
>> were to rave about Morse communications they'd beat down the
>> door to learn it. If you run down Morse, they kick and scream
>> if they're "forced" to learn it.

>They may get their initial impression of any mode that way, but
>few are stupid enough to "love" doing what a machine does best.

Right. Look at the toys kids play with; walk into a toy store and see the toys that are being sold. Most require manual operation. Tell a child having fun playing with such a toy that a machine could easily replace what their fingers are doing. They'll just stare at you or ignore you ("Mom, that man is bothering me!")

: >I should know...I've had one for years (and love it), but I do know it's

The Yaesu FT530 and FT51R can also monitor two VHF 2m frequencies at
the same time.

: The Icom IC2SRA *will* do this on two meters. I know... I have
: two of them (and might be willing to part with one of them :-).

: The "two meter transceiver side" will, of course, monitor any two meter
: frequency, and an extended range of frequencies above and below two meters
: (but not as high as 222 MHz or 440 MHz.)

: The "scanner side" of the radio will monitor any frequency from
: about 25 MHz to 900 MHz or so, INCLUDING two meters.

: So you can monitor one two meter frequency on the transceiver side,
: and another two meter frequency on the "scanner" side.

: I have actually done this. During the aftermath of Hurricane Fran,
: the State Emergency Operations Center (EOC) was operating on 146.88 MHz and
: the Wake County EOC was operating on 147.15 MHz and I needed to monitor
: them both at the same time... and I COULD do so, and did so with my
: IC2SRA.

Only 28.3-28.5, huh? Looking back to the last cycle, I distinctly
remember most of the problem being up in the 29.6-29.7Mhz range. Lots of
repeater jammers, noiseboxes, profanity, etc. And for some bizarre
reason, the Morse hazing ritual is 13WPM in that section of the band. Go
figure.

Hi,
If you want cheap (but good) Synoptic weather decoding software
that can produce weather text or charts from synoptic data, visit
this site.

http://www.angelfire.com/az/jeffreys

P.S. The site should work now!

5093. Alpha Bravo phonetics: the quickie version

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-04 00:00:00 UTC
From: Brian.Kelk@cl.cam.ac.uk
Message-ID: <5fi0uv$a1p@lyra.csx.cam.ac.uk>
Source record: 203079
Cross-posted to: alt.usage.english,sci.lang,rec.radio.amateur.misc,rec.radio.info,soc.culture.german

Phonetic Alphabets (Alpha Bravo etc)
(brief version)

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets, spelling alphabets and telephone alphabets.

I have a collection of alphabets for many languages which
I post occasionally, but as that now amounts to over a
thousand lines I here post a brief sample.

Brian Kelk bck1@cl.cam.ac.uk
4 March 1997

That famous alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

(It is approved by various official bodies but note the
variant spellings Alfa Juliett Juliette Oskar Viktor.
It dates from about 1955 and is used in air traffic control,
amateur radio and many other circumstances.
One of its titles is the NATO Phonetic Alphabet.)

An earlier alphabet (used by U.S. Navy up to 1954):

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

A French alphabet:

Anatole Berthe Ce'lestin De'sire' Euge`ne Franc,ois Gaston
Henri Irma Joseph Kle'ber Louis Marcel Nicolas Oscar Pierre
Quintal Raoul Suzanne The're`se Ursule Victor William Xavier
Yvonne Zoe'

A German alphabet (used by emergency services):

Anton Berta C"asar Dora Emil Friedrich Gustav Heinrich Ida
Julius Kaufmann Ludwig Martha Nordpol Otto Paula Quelle
Richard Samuel Theodor Ulrich Viktor Wilhelm Xanthippe
Ypsilon Zacharias

"Arger Charlotte "Okonom Schule "Ubermut

Two Spanish alphabets:

Antonio Barcelona Carmen Chocolate Dolores Enrique Francia
Gerona Historia Ine's Jose' Kilo Lorenzo Llobregat Madrid
Navarra N~on~o Oviedo Pari's Querido Ramo'n Sa'bado
Tarragona Ulises Valencia Washington Xiquena Yegua Zaragoza

Amalia Beatriz Carmen Domingo Enrique Federico Guatemala
Honduras Ida Jose' Kilo Lima Llave Me'xico Nicaragua N~on~o
Olimpo Pablo Quito Rafael Santiago Teresa Uruguay Venezuela
Washington Xilo'fono Yucata'n Zorro

An Italian alphabet:

Ancona Bologna Como Domodossola Empoli Firenze Genova Hotel
Imola Jersey Kilo Livorno Milano Napoli Otranto Palermo
Quaderno Roma Savona Torino Udine Venezia Washington ics
York Zurigo

For more details and more alphabets see the full list, which
is posted at intervals to sci.lang, rec.radio.amateur.misc
and rec.radio.info; it is now also crossposted to various
*.answers groups. On the World Wide Web you can find copies
of the postings and some further material at:

<http://www.cl.cam.ac.uk/users/bck1/menu.html>

Not bad Drew you only got a few facts wrong. Better than usual.
BTW, I see you still can't learn the code. Stop sniviling and
make an effort. We (the Ham community) are not going to give you
general class privileges on HF just because you want them.

This isn't a totally ridiculous idea, but it would require the existance
of a transaction based system to prevent conflicts. Independent travel
agents use such a system to avoid selling the same airline seat twice.
The same sort of system could work for frequency coordination too. This
would allow amateurs desiring coordination to seek out the local "agent"
who is most helpful and prompt rather than having to deal with a monopoly
agent who has no desire to service the request (which is all too common

in some areas today).

This does presuppose some third party running the transaction system. The FCC could do it, but that's unlikely. It is more likely that the job would be contracted to a National Frequency Coordination group, or the ARRL. No decision making power would reside with this body, it would simply act as a central clearing house to avoid conflicting coordinations.

Of course coordination is a much more complex job than selling an airline seat. A good coordinator has to take into account a number of technical factors to ensure a given coordination will "work". And there are different bandplans and different spectrum management policies in effect in different regions. A good set of software configured for a given region's rules, and cognizant of local terrain factors, would have to be uniformly used in a given region by local coordination agents to have a hope of working properly. This isn't far fetched, and with internet connectivity, it should be fast and functional.

Gary

Johnathan,
There are plenty out there. I used to sell them from a small business
I owned. Look at the well established ones like QRZ which can usually
be had for <$15, and $10-$11 at Dayton. Includes callsign database
also. There are several on the market already.

[snip]
>The poster wanted to monitor 2 frequencies in the SAME band...the W2A can
>NOT do this.
>I should know...I've had one for years (and love it), but I do know it's

The Icom IC2SRA *will* do this on two meters. I know... I have
two of them (and might be willing to part with one of them :-).

The "two meter transceiver side" will, of course, monitor any two meter
frequency, and an extended range of frequencies above and below two meters
(but not as high as 222 MHz or 440 MHz.)

The "scanner side" of the radio will monitor any frequency from
about 25 MHz to 900 MHz or so, INCLUDING two meters.

So you can monitor one two meter frequency on the transceiver side,
and another two meter frequency on the "scanner" side.

I have actually done this. During the aftermath of Hurricane Fran,
the State Emergency Operations Center (EOC) was operating on 146.88 MHz and
the Wake County EOC was operating on 147.15 MHz and I needed to monitor
them both at the same time... and I COULD do so, and did so with my
IC2SRA.

5112. help-rf overload

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-04 00:00:00 UTC
From: Michael Weiseman <mwise@iland.net>
Message-ID: <01bc285a$37d7f9c0$e10003d0@mwise.internetland.net>
Source record: 203156

Hello All, I have just recently replaced the scanner in my vehicle and would like to protect it from my 2 meter amateur rig. I live in a fringe area and usually have to run 50 watts and occasionally 160 watts to reach the closest repeaters. My problem is that I would like to find a way to protect my scanner from this rf overload since the antennas aren't placed too far from each other. I did at one time see a product from Electon Processing that done this called the "SCANR SAVR" but I beleive they are now out of business. I also found a product by DEO and is the DEO RG 2000-U, I asked the campany selling the product and was told it would not work for this application. I would like something that does this automatically and I don't want to crack the case on my 2 meter transceiver which is under warranty to wire something to the ptt circuit to disconnect the scanner antenna whenever I key up. Any help or suggestions you can give will be greatly appreciated.
You can either email me at (mwise@iland.net) or post to this newsgroup,

Thanks In Advance,
Michael Weiseman

Much to the delight of Bill Pasternak, but not to some of the fun people that used to be on the repeater, Roy Tucker put the gun in the proverbial mouth and pulled the trigger.
After 20 yrs plus (in various iterations) Tucker, N6TK (yes, the same nut who bastardized the club call sign program), pulled the plug after successfully implementing the Double Standard Rule. Using this "rule", Tucker singlehandedly turned the repeater over to the 10-15 scumbags who use it today. Tucker, a wanna - bee college professor (in reality an instructor at a suburban junior college) encouraged the illiterate, drug using losers to spend most of thier waking hours jamming each other and spending hundreds of dollars buying amplifiers and antennas in the futile hope of being #1 !!!
Meanwhile the fun folks quietly slipped away to other pursuits, most never to return to the air.
So, thanks Roy Tucker, thanks for nothing....thanks for your bungling, stuttering mis-management for the past several years.....but.....you left a legacy.....a legacy that can be heard all over So California repeaters these days.....the leagcy of the jamming perverted unemployed drug users you created and encouraged on the "new" 435.....

Thanks Roy.....I pity you, and am embarrased for you...

Need 200+ UHF Receivers!

I am looking for a small (Aprox 2" x 2" x .5") UHF receiver.
If my project is successful I will need aproximately 200 of
these units every few months. I can design and build these
units myself if need be, but I do not want to re-invent the
wheel. Here are more specs:

Input sensitivity: -118 db
frequency: xtal controlled, aprox 415.0 Mhz FM
channels: two, within 1Mhz of each other
RF Bandwidth: 12Khz
Audio bandwidth: 100Hz - 3 Khz
Audio Output impedance: 50 - 100 ohms
Audio Power output: 60 - 100 mW
Power Supply: 6V, 40mA, maximum
Temperature range: -22F to +140F
Package: Circuit board assembly only

(Note: the input sensitivity requirement is a little "stiff",
I could add a preamp if necessary)
If you have information that would lead to locating such a device
please forward to blum@goodnet.com Include specifications and
price.

5123. Re: CTCSS Tone Decoder

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-04 00:00:00 UTC
From: jcwren@atlanta.com
Message-ID: <332d3c75.90860700@nntp.atlanta.com>
Source record: 203167

Bill,

The problem that I see here is there are only 38 CTCSS tones,
which would limit you to (duh...) 38 radios. Also, you would need a
piece of equipment that identify CTCSS tones. This usually requires
some slight modification to the radio, since you have to pick the
audio off before the high pass filters that drop off the audio below
about 300Hz.

A better method might be to use a DTMF tone transmitter. You
could have each radio send a 3 digit burst each time the key is
pressed. Plus, a DTMF decode hooks straight to the audio out of the
radio. A disadvantage here might be if that you're using a commerical
repeater, it might not allow passing of DTMF tones (I don't know
anything about the commerical repeaters, but many amateur repeaters
suppress DTMF tones). By the way, this might also apply to the CTCSS.
A repeater is very likely not to pass CTCSS tones, primarily because
of the rolloff.

Even better, If you look in the Radio World magazine (I think
that's the name... It's a an industry rag), they have all sorts of
devices intended just for this purpose. They are designed for exactly
what your trying to do. Also, thinks like stuck PTT buttons, etc.

Hope this helps.

- John

If you think 40m is bad, wait until 10m opens back up. You'll get to
hear that you're on a net frequency everywhere you go. You'll also hear
people tell you to get off of "their channel" (Only on 28.3 - 28.5
though). Now isn't that special?

Hi Al,

It isn't "cheap" by your definition, but I am VERY pleased with
my Heil "Pro Set" with the HC-4 microphone element. The headset
is very comfortable to wear (even for extended periods like during
a full weekend contest), has excellent physical adjustment range,
and good "cans". The HC-4 mic element has exagerrated rolloff and
is quite "punchy" in pileups.

New cost is around $125 (I think).

73, de Hans, K0HB

PS: I have no business connection with Heil... only a satisfied customer.

This sunday, 3-9-97, Bill Pasternak, WA6ITF, (Newsline), will be
the special guest on the nationally syndicated radio show, Ham
Radio & More. Bill will discuss the current hot issues in amateur
radio today, and field your calls and comments on the toll-free
listener call in lines. More show info is below.

Len Winkler, KB7LPW lenwink@goodnet.com
P.O. Box 9219 kb7lpw@kc7y.az.usa.na
Phoenix, AZ. 85068-9219 ARIZONA ARRL PIC

Ham Radio & More Show info at:
http://www.goodnet.com/~lenwink/hrm.htm
http://www.tapr.org/hrm (RealAudio site to hear past shows) (Thanks TAPR)

The Ham Radio & More Show airs LIVE each Sunday at 6:00pm ET,
(2300utc), on many local commercial stations throughout the country.
ALSO: LIVE on WWCR Shortwave, 5.070mhz.
ALSO: LIVE on RealAudio at: http://www.AudioNet.com/radio/business/kbnp (Thanks KBNP)

Also available tape delayed via WWCR Shortwave on Mondays,
at 1000utc on 3.210mhz, and Sundays at 0600utc on 5.070mhz.

Support "WOG", the Written Only General!
WOG info at http://www.goodnet.com/~lenwink/wog.htm

>I hear this whine on a regular basis and I'd love to see something
>that substantiates it. My alma mater (University of Illinois) has

Call UI's math department chairman and ask about the national trend
in weakening the methods university mathematics is taught; mention the
key words "Calculus reform" (he'll probably groan).

Look at the listing of math courses offered at UI; what used to be
high school classes (algebra, trigonometry, function theory, analytic
geometery, precalculus) are now standard university classes. If that
in itself doesn't convince you there's been a weakening in both HS and
college curriculums over the decades, then nothing will.

Check out the course offerings of your local community college - you'll
see both grade-school arithmetic and reading/writing courses offered.

To "...see something that substantiates it" you'll have to do more than
just read the radio NGs, Todd.

>percentage of students with many hours of AP credit, i.e., having
>taken not only all the high school prerequsites, but a number
>of college level courses as well. This hardly sounds students
>that need to be taught remedial-level material.

I've had those AP-credit pupils in my math classes. Their grades in
calculus and precalc are no better those w/o AP-credit. AP-credit
seems to be used just to inflate a student's self-esteem.

>> The attitudes I hear on the air are fine. But you're right about
>> the skill problem - too many of these VHF-only guys get their
>> license just to yack - they're not builders at all (can you
>> imagine *buying* a V/UHF antenna? Hahaha - what a riot! I'm
>> shocked that commercially-built V/UHF antennas are even offered
>> for sale.)

>Interesting... You must have the machine shop necessary to accurately
>drill 30 holes perfectly in line, spaced to 0.1 mm over 7 meters,

Didn't you take shop class in junior high? Don't be such an appliance
operator, Todd. Learn some manual skills - their quite beneficial,
you know.

> One might ask why
>any fool would buy an HF antenna. "Hahaaha - what a riot!" Let ye
>without fault cast the first stone.

I thought it was just a given that serious hams build *all* their
antennas and antenna-related equipment; a further indication that
the level of general education has indeed decreased.

5135. Young Ham of the Year Award

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-05 00:00:00 UTC
From: newsline@ix.netcom.com
Message-ID: <5fko8s$h4i@dfw-ixnews10.ix.netcom.com>
Source record: 203030

The nominating period is now open for Newslines' 1997 Young Ham of
the Year Award. This program honors annually a youngster, age 18 or
younger, residing in the continental 48 states and holding a valid FCC
issued Amateur Radio license, who has made one or more signifigant
contributions to society, technology or to the Amateur Radio Service
using Amateur Radio.
More information and a nominating form are available at our
Newsline web page at URL: http://rrnet.com/rrra/newsline
If you know of a young ham who you feel meets the basic crieria
above, and who you feel is derseving of receiving such an honor, please
nominate him or her at this time.

5136. Net Guide on Web?

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-05 00:00:00 UTC
From: Jon Ayscue <ayscue@stsci.edu>
Message-ID: <331D905E.14C1@stsci.edu>
Source record: 203031

I haven't been active in quite a while, and I was wondering if there is such a think as a guide on the Web that lists the various nets and the times and frequencies that they use.

Does anyone know if such a Web page exists?

thanks in advance,

Jon
KC3OU

Hello DSP-freaks

Does onyone know the algorithm for making an adaptive
multitone notchfilter on a DSP? Please e-mail me
information about a solution or where to find any
useable information.

Any special information to use on the ADSP2181
(EZ-KIT LITE)is appreciated but not a must...

yours faithfully

Bjarke

```
SB QST @ ARL $ARLB012
ARLB012 FCC proposes changes in spread spectrum regs

ZCZC AG12
QST de W1AW
ARRL Bulletin 12 ARLB012
From ARRL Headquarters
Newington CT March 5, 1997
To all radio amateurs

SB QST ARL ARLB012
ARLB012 FCC proposes changes in spread spectrum regs

Responding to a petition for rulemaking from the ARRL, the FCC has
proposed in WT Docket 97-12 to adopt changes in its Amateur Service
rules governing spread spectrum. In spread spectrum the energy of
the transmitted signal is distributed among several synchronized
frequencies within a band and reassembled at the receiving end.
This reduces power density and duration of a transmission on a
particular frequency and lets spread spectrum almost invisibly share
the same spectrum with users of other, narrowband modes. Spread
spectrum also provides for improved communication under poor
signal-to-noise conditions and in selective fading and multipath
environments, and the ability to accommodate more communication
channels operating simultaneously in the same spectrum.

The League's December 1995 petition asked the FCC to relax its rules
to give Amateur Radio more opportunities to contribute to the
development of spread spectrum techniques. Specifically, the League
sought to have the FCC relax restrictions on spreading sequences and
asked for greater flexibility in spreading modulation. In response,
the FCC now has proposed to drop rules restricting amateur stations
to transmitting only frequency-hopping and direct-sequencing
spreading techniques. As requested by the League, the FCC also has
proposed to require automatic power control for spread spectrum
transmitters, to ensure use of the minimum power level needed to
carry out communication.

The FCC also went along with the League's request to permit brief
test transmissions using spread spectrum and to allow international
spread spectrum communications between amateurs in the US and those
in countries that allow hams to use spread spectrum. The current
rules allow only domestic communication.
```

The use of spread spectrum techniques was first approved for Amateur Radio in 1985 for bands above 225 MHz and at power levels up to 100 watts, and there has been some experimental amateur operation since then. The FCC also has authorized Special Temporary Authority (STA) in some instances to allow broader SS experimentation. Since spread spectrum was introduced in the Amateur Radio service, commercial spread spectrum applications have been developed, including personal communication services, remote meter reading and position locating. But, the League had argued that rules limitations held back further spread spectrum experimentation. No changes are proposed in the frequency bands where spread spectrum is permitted.

The FCC said the rule amendments would ''increase spectrum efficiency and allow amateur operators to contribute to technological advances.'' Comments on the NPRM in WT Docket 97-12 are due May 5, with reply comments due June 5.

SNIP

> Jeff KH2PZ

I don't know where you were taking these math classes, Jeff, but my personal experience in AP, AE and Gifted classes in the Los Angeles Unified School District was that the educational value of the class, regardless of what the subject was, was totally dependent on the instructor's qualifications/expertise/motivation. Those instructors who were appropriately qualified to teach the course, and who showed a keen, sincere interest in teaching the subject matter to the students, were the most effective. Those instructors who were obviously unqualified to teach the particular subject (or any other, in some cases), were unable to succeed, and ended up with a class with low marks (if they used the established, approved grading tests and methods) or passing marks (if they assigned arbitrary grades to their students to appear successful as a teacher, for lack of a better motive). Teachers of this caliber were definitely out there "in circulation", and shouldn't have been. Perhaps your AP teacher was one of these, and that is why the class grades suffered. A good (qualified) teacher practically always succeeds in teaching his or her students. Many of my classroom situations remind me of Jaime Escalante and the materials he had to work with (including the students and lack of teaching supplies) - yet the teachers in those classrooms overcame the material and student limitations and succeeded in teaching my classmates and myself the subject, all the way down the line. I am lucky that most of my teachers were successful - it appears that "qualified" and "success" are the keywords here - those teachers who really wanted to teach, and were qualified, were successful. Those who didn't (or couldn't), and weren't, were failures. It's that simple. Maybe their area of expertise was elsewhere. If so, they should have never strayed from their specialty, to prevent wasting otherwise good class time that a student would have benefitted from, if a good qualified teacher were present.

As you can see, I have very strong, defensive feelings about the instructors that I had the pleasure of learning from throughout my secondary education. I owe much more to them than I can ever hope to repay. They helped form my mind and prepare me for the future that I am now living. I am pleased to say that the education that they gave me has kept me very gainfully employed, and had helped me to be a productive, contributing part of this society. It isn't my self-esteem that has me in the highest tax bracket that this country has to offer, and keeps me there. I am truly sorry that you had a bad experience with an AP teacher. But this is no justification to make blanket negative statements that may only reflect YOUR reality, in your microcosm, and not that of academia in general, or the AP program, instructors, and students in particular.

73,

Doug Gavilanes, N6XQY
Garden Grove, California

Absolutely is it worth it. There is more than enough room on the Tech+ CW bands to cut your teeth. For example, here in central TX I get all the contacts I can deal with when on the air in the evenings on 80M.

Enjoy it and ignore the naysayers.

BTW, good luck in your test.

5145. 100's of "Ham Radio Only" Classified Ads & Post for FREE!

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-05 00:00:00 UTC
From: wb6siv@telis.org
Message-ID: <wb6siv-0503971518090001@s02-pm06-ontro-t.telis.org>
Source record: 203040

The Raymond Sarrio Company's Ham Radio WWW site has a very large data base of ham radio classified ads. All ads stay on-line of 30 days and are list at NO COST:

http://www.sarrio.com.

Browser/buyer information:
My free classified service allows Hams to search for equipement with the help of our new and unique search engine. The search engine allows you to search by Title and Manufacturer--no need to scroll through 100's of listing before you find that special piece of gear, nor do you need to wast time waiting for a long list of ads to be downloaded. Plus, when you find the gear your interested in, you can point-and-click to creat an e-mail access to the Ham that listed the item.

Seller information:
For those Hams with gear to sell, take note! It is absolutely FREE to list your equipment within the Ham Classifieds, and there will be no posting time delays.Your posting will go on-line, in our classified search engine,in about 1 hour. All you need do is fill out a simple forms page, and upon its (point-and-click) submission, your "For Sale" advertisement is on-line.

The classified listing are purged every 30 days, no need to repeatedly repost your ads, as is often the case in rec.radio.swap, where over a 100 ads are added each day, and many of which are commerical nonhamradio items. As a result, your ads are quickly lost. Most newsgroup software programs have a default cap of only 400 to 500 listings. That's about 4 days of postings here. So when you post with us you don't have to keep coming back to repost every few days. BTW, when your month is up you will a note informing you that your posting is being purged, and if you would like to continue your post please return to the site and fill out a new form.

Give it a try, 73's Ray

MOTOROLA
MICROPROCESSOR
DEVELOPMENT
SYSTEMS FOR SALE

We have several microprocessor development systems available for Motorola 68HC05 and 68HC11. They are as follows:

1. Motorola CDS8-Emulation Sytem - For family M68HC05 microprocessors. Emulator, three programming modules, software, manuals, emulation cables. Cost approximately $5000. Price $1000.

2. Motorola M68HC705KICS K-Series In-Circuit Emulator - For 68HC05 family microprocessors. Emulator, programming module, software, manuals, emulation cable. Cost approximately $750. Price $250.

3. Motorola M68HC11EVB Evaluation board - For 68HC11 up. Price $50.

4. Byte Craft C Compiler for M68HC05 family. License cost $800. Have the latest version 4.10B and manuals. Will transfer the license to you for $600.

Thanks for your interest. Please respond to:

>give will be greatly appreciated.

Well, you don't have a lot of choice if you want effective protection.
You can probably make up an adapter cable that breaks out PTT, typically
a make to ground, from the microphone cable. That avoids having to open
the radio. (But shame on you for being reluctant to open the radio.)
A simple coax relay probably won't offer sufficient protection, however.
The capacitance between the open contacts will probably still be enough
to couple enough signal to the scanner front end to damage it. You'll
want to arrange the relay so that it switches the input to the scanner
to a dummy load instead. (You could just arrange the relay to short the
coax to the scanner on transmit, but the scanner front end may not be
stable with the input shorted and could break into a destructive
oscillation.)

And you really need a sequencer which insures the relay has switched
before the radio goes into transmit. Probably the best thing to do
is to build a box to which the microphone connects which drives the
scanner protect relay and *then* keys the radio. You can do this with
a pair of small keying relays, one with a RC delay circuit on the coil.

You *can* try a pair of back to back diodes across the scanner input,
but that's an open invitation to huge amounts of IMD (not that the
scanner probably doesn't already suffer from huge amounts of IMD).

>the DoT.

What about the National Guard? There are 50 of those, each (theoretically) an independent military force, at least until the shooting starts. Then, like the Coasties, they fall under the command of the real military.

The Marine Corps is under the Department of the Navy. Coasties come under Navy control during military operations too. National Guard units fall in with their Army or Air Force counterparts when activated. So there are really only 3 military services, but 51 of them are quasi-independent until the shooting starts.

There used to be only 2 military services, back when we had a War Deptartment and knew how to fight to win wars, but the Air Force broke away from the Army to make 3, and no end of problems that's caused. The Army had to start its own new air force, and the Navy got one too, meanwhile the Air Force got air commandos and flying boats. Go figure.

Of course the Navy is the only Constitutionally sanctioned permanent military force (it consists of submarines and targets). The Constitution prohibits a permanent standing Army (that's why they get to ride in those cool humvees), and is completely mute on the subject of an Air Force (but Congress treats it as a wayward part of the Army and makes sure that the AF guys don't have to stand either).

That's probably because you have neither the technical knowledge
nor the equipment to realize that they are there. Ever hear of
Skipnet? It's that noise you don't understand down there among
the antique beeps.

More than any metal? How about tungsten? Offhand I can't think of any
plastics which can sustain 2700 degree temperatures. Now some ceramics
can, and perhaps some carbon fibre composites can for a moment or two,
but plastics?

Of course this is all rather moot since any fire which raises the
radio temperature enough to melt a metal case isn't going to leave
the innards unscathed, not the mention the firefighter carrying it.

Use a gain antenna on the receiver, such as a yagi. For every 6 db of gain you will double the distance.

Just out of curiosity: how do the people there find clear spots? Do they
park there 24/7? Sometimes, even when i think a freq is clear once i ask,
people pop up and claim to be using the freq...:)

I have a like new duelband kenwood TM-733A with backlit mic and
duplexer.
I bought this radio on a closeout wim and did not really need it.
I have all paperwork, box and warrany card.
This radio is three months old with less than ten minutes of talk time
on it.
I will take $390.00 and I will pay shipping.
This is a firm price and I am not interested in any trades

A military draft will never happen again in the US. The reason is because now when you sign up for any branch of the service you sign up for eight years. I currently am in my second year of six in the Army Reserves. When I done with my six years I will be considered in-active for two years which means, if needed they could call me back. This is true with everyone. So if you sign up for three years you actually could be called back for five years after you are done. These procedures will eleminate a draft.

That still means 75% of the military has abandoned it's use. 3 out of 4 have deemed it obsolete and abandoned it's usage. How long before the Navy follows suit?

>copy at 10WPM and pass a multiple-choice code test.

I wasn't aware the requirement had been lowered to 10WPM. Probably
because it hasn't been. This is just a proposal by the ARRL to head off
what they fear will be even lower Morse requirements (5WPM) or an outright
abolishment of the Morse hazing ritual altogether. Heaven forbid THAT
should ever happen...gee, we might even get some fresh blood into the
hobby if we eliminate the Morse initiation ritual. And we can't possibly
have THAT, now can we?

Hahaha - he didn't even get it, Mike!

Okay Drew, I'll explain MD's comment: It's been pointed out by several
VEs that folks are passing the multiple-choice code tests but can't
copy solid Morse at the speed required. One VE said he knew an examinee
who passed the 13wpm test but couldn't even copy 8wpm. So it would appear
as if the "barrier" *has* been lowered. Just find yourself a VE who
doesn't make you copy one minute solid copy, and you can join your
heros on 75m phone.

I stand corrected. Therefore, it is not 3/4 or 75% of the military has
abandoned Morse, but rather, 4/5 or 80%.

Works for me.

There is a growing group of amateurs in the Fayetteville NC area operating SSTV on 146.55 simplex nightly. They are very friendly, and I'm trying to spread the word to improve activity on this cool mode.

Many of you have SSTV gear. The interfaces are very cheap at hamfests, and you can send images from your computer or cameras. I've wondered why no one was experimenting with this mode on VHF/UHF, and it seems that they are!

Get your interface connected to the VHF rig (or pick up one at a hamfest), and spread the word.

>who passed the 13wpm test but couldn't even copy 8wpm. So it would appear
>as if the "barrier" *has* been lowered.

Hey, if you have a problem with the testing rules, take it up with the VE coordinators or your buddies at the ARRL. They are only doing what is legally required of them in regards to the Morse hazing rituals. It's a joke to requrie ANY Morse in this day and age as a condition of obtaining a government-issued radio license, so why not make a joke out of the testing as well?

>Just find yourself a VE who doesn't make you copy one minute solid copy,
and >you can join your heros on 75m phone.

Sorry. Not interested. Besides, I'd rather wait until the Morse requriement is dropped to 5WPM or eliminated altogether. When it is, I'll be the first one to say "I told you so."

I have a Generic Brand Laptop for sale. It's a 386SX/25 w/1meg ram, 80meg h/d, VGA monochrome monitor and a case to carry it in.
The plug in the back broke, so I rewired another plug which works fine with the power supply I have for it. I also have the same plug connector attached to the car cord I made for running it in your vehicle. Great for portable packet, DX loggings, tracking satellites like I do and any other thing you can think of to use this hand tool.

Asking price is $300 obo and I'll pay the shipping.

You can e-mail me if you need any further info, or leave your number and I'll be more than happy to call you back. If you want to call me, you can anyday but Sunday between the hours of 4pm and 8pm pacific time. 702-453-0821

Thanks all, awaiting reply.

>Kit Manning
>KC5WXF

Good luck with the 5 WPM Kit and Tech+. Regarding how much spectrum you get for your 5 WPM, you need to keep in mind that CW is a narrow band mode and thus does not require the bandwidth of FM or SSB. 50 kHz is room enough for a large number of simultaneous QSO's. For instance take a look at the size of the 30M band and keep in mind that this is a "shared" band with other services. You also get an opportunity to experience the differences in propagation on various bands from 80M to 10M, and how it can vary with the 11 year sun spot cycle, greyline characteristics, etc.. You also get a larger piece of the 10M band for SSB communication (needed due to increased bandwidth of the signal). As far as "You have to get your 13 WPM" and "There isn't much else for the Techs", I'm not sure that I agree. As a Technician you already have access to the vast majority of the Ham Radio frequency spectrum. You have any number of modes (FM, AM, CW, SSB, Packet and other digital modes, FSTV, etc.) and forms of communication (Tropo, scatter, sats especially with Phase III on the horizon, EME, aurora, etc. to name just a few) available to you. I think far too many folks think that all they have available is FM and repeaters. Nothing could be further from the truth. Have fun with your new priviledges and continue to enjoy those that you presently have.

This is why we need to band together and mobilize to eliminate the Morse hazing ritual from amateur radio.

Just to clear things up, It was the server provider that was at
fault here, NOT ME! The server was down for a few days, as it
changed address or something, but I'm told its working now.

Found a great contest that gives away free logging software !
And the site has lots of other neat stuff too ! Like links,
shareware downloads, etc. Thought you'd like to know.

Go to : http://www.esdi.com/log-it

PS: Contacted the webmaster and was advised a real-time chat
service was going to be implemented soon ! Sounds like a
good chance to rag chew when the bands are down and maybe
share some good information with fellow hams ? I've
bookmarked this site for future reference.

Only because they're being nice to us by speaking in English, plus the fact that English is *mandatory* in many countries. French is also mandatory in some countries, which, BTW, is the "universal" language as recognized by the United Nations.

You don't mention what band you plan on working on. Since you talk
mostly
of handhelds I am going to assume you don't mean HF radios. My next
guess
is that you most likely are looking to get on 2m. In that case I
recomend
the Radio Shack HTX-202 radio for a few reasons.

It is easily available for inspection, you can look at and play with one
at
any Radio Shack store. It has all of the features a new ham needs in a
2m
radio and is easy to use. It has an availble _5 Year_ warranty at a
reasonable
price. No other manufacturer can top that.

It does have disadvantages however. It is larger than most other HT's
on
the market today. It is very limited in memory frequencies. It does
not
receive any out of band frequencies and it is _not_ modifyable in any
way,
no matter what someone may tell you.

In short, its not the only choice but for a new ham it has what you need
for a reasonable price from a reliable manufacturer.

Hi,

Name is Gary and I have for sale a Kenwood TM-733A
Duel bans mobile radio. This radio is only three months
old and is in excellant condition. Reason for selling is
that I bought it on a close out wim and did not really
(NEED) it. It comes with warranty, Backlit mic, Duplexer,
Manual and box. I paid 395.00 for it and would like to get
380.00 for it and I will pay for the shipping in the US.
I think this is a Good deal since a new one comparable to
this radio is around 460.00 new. This radio has the removable,
remote face plate if you want to mount raio seperately.
I do not have this cable.
No trades

I will be doing a presentation for our regional amateur radio club in two weeks on THE PROLIFERATION OF ILLEGAL OPERATORS ON THE HF AND VHF AMATEUR FREQUENCIES (bootlegging!).

Any first-hand anecdotal information which you could provide would be appreciated. I am looking at the problem from both a USA and international perspective.

I am especially interested in examples of individuals/groups, including those in or on the fringe of the public safety sector, who are using two-meter handhelds illegally.

5206. FCC responds to ARRL SS petition

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-06 00:00:00 UTC
From: hans_brakob@adc.com
Message-ID: <857657231.20192@dejanews.com>
Source record: 203058
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

Responding to a petition for rulemaking from the ARRL, the FCC has proposed in WT Docket 97-12 to adopt changes in its Amateur Service rules governing spread spectrum. In spread spectrum the energy of the transmitted signal is distributed among several synchronized frequencies within a band and reassembled at the receiving end. This reduces power density and duration of a transmission on a particular frequency and lets spread spectrum almost invisibly share the same spectrum with users of other, narrowband modes. Spread spectrum also provides for improved communication under poor signal-to-noise conditions and in selective fading and multipath environments, and the ability to accommodate more communication channels operating simultaneously in the same spectrum.

The League's December 1995 petition asked the FCC to relax its rules to give Amateur Radio more opportunities to contribute to the development of spread spectrum techniques. Specifically, the League sought to have the FCC relax restrictions on spreading sequences and asked for greater flexibility in spreading modulation. In response, the FCC now has proposed to drop rules restricting amateur stations to transmitting only frequency-hopping and direct-sequencing spreading techniques. As requested by the League, the FCC also has proposed to require automatic power control for spread spectrum transmitters, to ensure use of the minimum power level needed to carry out communication.

The FCC also went along with the League's request to permit brief test transmissions using spread spectrum and to allow international spread spectrum communications between amateurs in the US and those in countries that allow hams to use spread spectrum. The current rules allow only domestic communication.

The use of spread spectrum techniques was first approved for Amateur Radio in 1985 for bands above 225 MHz and at power levels up to 100 watts, and there has been some experimental amateur operation since then. The FCC also has authorized Special Temporary Authority (STA) in some instances to allow broader SS experimentation. Since spread spectrum was introduced in the Amateur Radio service, commercial spread spectrum applications have been developed, including personal communication services, remote meter reading and position locating. But, the League had argued that rules limitations held back further spread spectrum experimentation. No changes are proposed in the frequency bands where spread spectrum is permitted.

The FCC said the rule amendments would ''increase spectrum efficiency and allow amateur operators to contribute to technological advances.'' Comments on the NPRM in WT Docket 97-12 are due May 5, with reply

comments due June 5.

Many people think of SSTV as an "HF mode" but that is not the
case at all any more. There is now a lot of SSTV activity on
VHF FM. Although there is a recommended standard 2 meter frequency
for SSTV, different regions all seem to pick their own. A table
can be found at:

That's correct, except 25.6-26.1 MHz is called the 11m shortwave band.
Land Mobile runs from 26.1 to 26.48 MHz.

>That could be where the interference came from.

Usually one can easily differentiate between a SW broadcaster and a
two-way "freeband" conversation.

Hi Damien - I can't think of any service operating in that band, but
you might want to set your scanner a bit higher to the audio freq'y of
TV channel 2 (59.75 MHz if I remember correctly) to listen for KHON-TV
(assuming no one in Australia is using that freq'y).

This only works if you are ugrading. If you are getting your first
license, you must wait until you can find out your callsign, by
phone, computer, or mail, before you can operate.

If there is anyone out there that is using paging on a HAM transmitter please jump in and tell us about it.

Is it legal?

How are you doing it?

What equipment are you using?

Do you identify with each transmission?

Give us the story. Seems like this has some features that HAMs could use to assist in public service if it is within the rules.

Tell us what you are doing.

I usually use some WD-40 to dissolve the glue (but seems safe on _most_
plastics) then scrub with rubbing alcohol to degrease the area.

Hey I remember those walky talkies. I had a bunch of them. I learned the morse code before I had one of them. My grand father was a ham back in the 1920's when morse code was all there was. my parents got their license in the late 70's. My parents would practice the morse code after they sent us kids to bed, but I always had problems sleeping and learned the morse code with them. They were copying it on paper and I was doing it in my head. But they had no idea I was learning it with them. They would tell secrets in morse code and had no idea I knew what they were talking about. Until one night at dinner just before Christmas they were talking about what they got us kids. In morse code my mom said she had picked up a train for me, and I said "Oh boy, a train, just what I always wanted!". Thats the last time they did that! I now hold a general class license and believe fully that we should keep the morse code. If my grandfather heard about the no code license he would turn over in his grave. His call was W8AUU.

Thanks for reading this. I have a strange situation with my Kwd 520 SE and a new G5RV Shorty ant. When working phone the swr is about 1.5:1 and that is very acceptible. However when I switch to cw and send a tone the swr jumps to around 3:1 and this is too high. I transmitted a cw tone into the dummy load and it was flat so the radio seems to be fine. I use a tuner but this happens while on the same frequency. The question is whether the G5RV will accept the phone signal but not the cw one. This a new one on me so feel free to offer any ideas. Tnx de David N9VFR :-{

Two questions:

Are you sure you "set" the SWR meter? If so, how do you insure
you're talking at the same volume when you make the measurement
on SSB.

Are you at the same frequency for both measurements>

My guess is that the SWR is 3:1 all the time. You just don't notice on phone because the needle of your swr meter can't move fast enough to indicate the full value as you talk. You should always check swr on CW. The G5RV antenna is very reactive on most bands, and is intended to be used with a tuner; just tune for 1:1 and carry on.

Hi Dave,

The SWR of your G5RV system on any given frequency will be
independent of mode (in other words, it will be essentially the same
for SSB or CW).

My uneducated guess is that the *apparent* lower SWR on SSB is due
to the fact that your SWR meter is "slow" to react to voice peaks, and
thus never rises to show actual SWR, except when held "key down" in
CW mode.

Anybody heard when Frank's Candy Company is going to open the next gate for we poor lowly advanceds?

And, a companion question, anybody got a good way of finding out whether a particular call is AVAILABLE for reissue? I know about the callsign website, but all it tells you is that a particular call is or is not assigned to somebody, not whether it has laid dormant for the required period of time for reissue.

Jim

The match between the antenna and coax is what determines the SWR and has
nothing to do with whether you are transmitting cw or phone. In cw mode
you are getting full output from the transmitter and the 3:1 reading. On
SSB the SWR meter is reading the average of the SSB waveform which is
much lower than the cw mode reading.

ARLP010 Propagation de KT7H

ZCZC AP10
QST de W1AW
Propagation Forecast Bulletin 10 ARLP010
From Tad Cook, KT7H
Seattle, WA March 7, 1997
To all radio amateurs

SB PROP ARL ARLP010
ARLP010 Propagation de KT7H

There was no change in solar flux or sunspot activity last week, as we continue to experience the bottom of the solar cycle. There were some geomagnetic disturbances though, with the worst conditions on the last day of February when the Planetary A Index reached 32 and the highest Planetary K index was 6.

Over the next few weeks the geomagnetic field should stay predominantly quiet, except that a recurrent coronal hole with high speed solar wind could rotate into view around March 26 and 27. Solar flux should stay in the low to mid seventies, with the Sun mostly spotless.

Last week this bulletin reported that the solar flux on February 26 was 74. A closer approximation is 73.8 for that date. This does not change the average flux for the week.

Sunspot Numbers for February 27 through March 5 were 0 each day with a mean of 0. 10.7 cm flux was 73.8, 72.8, 73.5, 72.3, 74, 74 and 74.6, with a mean of 73.6. Estimated planetary A indices for the same period were 20, 32, 10, 12, 5, 4, and 7, with a mean of 12.9.

5247. Amateur radio in Rwanda

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-07 00:00:00 UTC
From: grc@arn.net
Message-ID: <5fpnvg$9ak@services.arn.net>
Source record: 203008

I have a friend who is going to be living in Rwanda and is interested in amateur radio operation there. The ARRL reports that they have no information on Rwanda. Does anyone have any leads on this? Thanks in advance.

--Scott

5248. FCC RF Exposure FAQ

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-07 00:00:00 UTC
From: hans_brakob@adc.com
Message-ID: <857762505.13612@dejanews.com>

Question: When are the Commission's new exposure limits effective?

Answer: The Commission released a Memorandum Opinion and Order on December 24, 1996 extending the effective date of compliance to September 1, 1997 for all services except the Amateur Radio Service. The Amateur Radio Service has until January 1, 1998. The effective date for mobile and portable devices was August 7, 1996. In the interim, all non-excluded services, except the Personal Communications Service, should continue to evaluate compliance base on the ANSI 1982 exposure guidelines. PCS base stations are required to comply with the ANSI/IEEE C95.1-1992 guidelines.

Question: When will the revised OST Bulletin No. 65 (OET Bulletin 65) be available to the public?

Answer: The Commission must first address the comments of the petitions for reconsideration regarding the adoption of new exposure limits. Since the adopted limits directly effect the tables and graphs within OET Bulletin 65, the bulletin can not be released until the Commission's limits are finalized. A Second Memorandum Opinion and Order is expected to be released in March 1997. It is expected that the bulletin will be released within a few days following the MO&O.

Question: Has the FCC adopted the new ANSI/IEEE C95.1-1992 guidelines as proposed?

Answer: The FCC is primarily a regulatory agency and is not an expert on matters pertaining to health and safety. The Commission generally followed the recommendations of expert health and safety agencies such as the EPA, FDA, OSHA, NIOSH, and others, to adopt field and power density limits as recommended by the NCRP Report No. 86 and the SAR limits from the ANSI/IEEE C95.1-1992 guidelines. The Commission is currently addressing seventeen petitions for reconsideration.

Question: Is the FCC going to preempt local and state government regulations relating to radiation guidelines and aesthetics?

Answer: Congress has passed the Telecommunications Act of 1996, P.L. 104-104, 110 Stat. 56(1996). Section 704 of the Act amend the Communications Act by providing federal preemption of state and local regulation of personal wireless service facilities on the basis of RF environmental effects. The Telecommunications Act also provides for resolution of conflicts related to the regulation of RF emissions by the courts or by petition to the Commission. Accordingly, we have amended § 1.1307 of our rules to incorporate the provisions of Section 704 of the Act. You may contact the Wireless Telecommunications Bureau at

(202)418-1310 for further guidance with respect to the Commission's policies implementing the Telecommunications Act of 1996.

Question: Is it safe to use a cellular phone?

Answer: The ANSI/IEEE and NCRP RF safety guidelines recommend that low-power devices such as cellular hand-held phones not cause a localized exposure in excess of specific absorption rate (SAR) of 1.6W/kg. Studies of human head models using cellular phones have generally reported that the SAR levels are below 1.6 W/kg level as averaged over 1 gram of tissue under normal conditions of use. However, some recent studies have reported higher peak levels under "worst-case" conditions that suggest the need for further dosimetric studies.

Question: Is a person that lives in a house located near a tower, which has multiple antennas on it, in any danger from the radiation emitted from it?

Answer: All FCC licensees, even those categorically excluded or below radiated power and height criteria, are expected to be in compliance with the FCC's exposure limits. It is the responsibility of all the licensees with colocated transmitters to ensure that individual contributions of each transmitter do not cumulatively exceed the Commission's limits in an accessible area. Exposure to RF levels below these levels is considered to have no detrimental biological effect by expert standards bodies such the Institute of Electrical and Electronics Engineers, Inc. (IEEE) or the National Council on Radiation Protection and Measurements (NCRP).

Question: Does the FCC have a database containing the technical parameters and location of the each transmitter?

Answer: No, the Commission does not have transmitter-specific for all services it regulates. The Commission has limited information for some services such as AM, FM, and TV broadcast stations, but there is no accuracy standard with respect to location. Location is generally specified in degrees/minutes/seconds format, but this is not sufficient to distinguish between colocated transmitters. In some services, licensees are allowed to use additional transmitters or increase power without filing with the Commission. Other services are licensed by geographic area, such that the Commission has no knowledge concerning the actual number or location of transmitters within a given geographic area. For further information on the Commission's existing databases, please contact Donald Draper Campbell via e-mail or call (202)418-2405.

Question: Does the FCC routinely measure RF radiation emitted by the services it regulates?

Answer: No, the FCC does not routinely measure the RF fields associated with these antennas. However, the FCC has done limited studies in which RF fields from antennas used for AM radio, FM radio, TV, cellular telephony, paging, and amateur radio were measured. There is an indication that in some accessible areas, particularly roof-top locations, the exposure limits may be exceeded. These areas a generally

not accessible by the general population, but may be accessible to individuals such as HVAC technicians, roofers, or window washing crews. This information was considered as a basis for requiring additional services to routinely perform an environmental evaluation.

Question: Does the FCC regulate RF radiation exposure from TVs or Computer Monitors?

Answer: The Commission does not regulate exposure from televisions or computer monitors. The Food and Drug Administration (FDA) has primary jurisdiction of consumer devices and inquiries should be made to the FDA's Center for Devices and Radiological Health (CDRH), specifically the Office of Compliance at (301) 594-4654. Questions with respect to health or biological effects should be addessed to EPA Hotline at 1-800-363-2383.

Question: If I file my application before the September 1, 1997 (January 1, 1998 for the Amateur Radio Service), am I "grandfathered" with respect to complying with the Commission's new limits?

Answer: No, the National Environmental Policy Act of 1969 does not allow "grandfathering." September 1, 1997/January 1, 1998 marks the end of use of the ANSI C95.1-1982 as the limits used by the Commission to process applications. After the deadlines, any proposed or renewal applications, for non-excluded transmitters, will be processed using the Commission's new limits. Mobile and portable devices for specific services have been processed under the new limits since August 1, 1996. For specific information with respect to the Commission's requirements for mobile and portable devices, please contact David Means at (301)725-1585.

Question: Is spatial or time averaging allowed with respect to Maximum Permissible Exposure limits for field strength and power density?

Answer: Yes, both the IEEE C95.3-1991 and NCRP Report No. 119 provide information on spatial and time averaging. The NCRP states, "the concept of spatial and time averaging may be appropriate from a thermal standpoint due to the dynamics of the body's thermal regulation characteristics." The premise of spatial averaging is that the human body can regulate the thermal load caused by high localized exposures as long as the total exposure does not exceed the whole body average limit. Similarly, the premise of time averaging is that the human body can regulate a specific thermal load within a given period. Thus, the human body can endure relatively high exposures for short periods of time as long as the average exposure does not exceed the exposure limit.

For more information on this topic please note:

OET Bulletin No. 56: Questions and Answers About the Biological Effects and Potential Hazards of Radiofrequency Radiation.

5251. ** $50,000 IN LESS THAN 90 DAYS ! **

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-07 00:00:00 UTC
From: CJProps@mediabrokers.COM
Message-ID: <199703071939.LAA01148@mail-gw3.pacbell.net>
Source record: 203012

YOU CAN MAKE $50,000 IN LESS THAN 90 DAYS
IN THE COMFORT OF YOUR OWN HOME!

**** DO NOT BE QUICK TO DISMISS THIS !!! ****
**** IT WILL MAKE YOU A LOT OF MONEY !!! ****

...Read the enclosed program... then read it again!

Dear Friend,

You are now reading the most profitable and unique program you may ever see. It has demonstrated and proven ability to generate large sums of money. This program is showing fantastic appeal with a huge and ever growing population which needs additional income. IT WILL WORK FOR YOU (don't let this slip through your fingers like I almost did) if you CAREFULLY FOLLOW the simple instructions and apply these next four points:

(1) INSIGHT: It is necessary to see the GREAT possibilities that this marketing program contains. READ IT SEVERAL TIMES, then later read it again! Calculate the numbers for yourself; you will see the amazing results that can be obtained.

(2) INVESTMENT: Not in me, or anyone else, but in yourself. Every endeavor which produces a profit requires some degree of investment, be it time, money, resources, etc. For the potential gain that can come to you, this investment is quite insignificant.

(3) APPLICATION: There is no such thing as a "FREE LUNCH". Even this opportunity requires some effort and time. Every successful venture does.

(4) PATIENCE: After you have accomplished the steps described, the program requires a little time before showing a good response. As it enters the 1st, 2nd, 3rd, and finally the 4th level of response, there is a time element that to some could be a bit aggravating without giving proper thought to *how* the program works, AND IT DOES WORK! You must allow 20 to 90 days... so be patient! "ALL THINGS COME TO THOSE WHO WAIT!"

This is a LEGITIMATE, LEGAL, money-making opportunity. It does not require you to come in contact with people, do any hard work, and best of all, you never have to leave the house, except to get the mail. Your orders come and are filled THROUGH THE MAIL, so you are not involved in personal selling. You do it privately in your own home, store or office.

If you believe that someday you will get that lucky break you have been waiting for, THIS IS IT! Simply follow the easy instructions in the next part of this message, and your dream will come true! This multi-level mail order marketing program works perfectly... 100% EVERY TIME.

Multi-level marketing is a respected way to sell goods and services. It is taught at the Harvard Business School. Of the 500,000 millionaires in the US, 20% (100,000) made their fortune in the last several years in MLM. Current statistics show 45 people become millionaires every day through Multi-Level Marketing. There is great opportunity here - if you find the right program. And this one works.

Thousands of people have used this program to raise capital to start their own business, pay off debts, buy homes, cars, etc., even retire! This is your chance, so don't pass it up... I cannot stress this enough! FOLLOW THE INSTRUCTIONS EXACTLY, and in 20 to 90 days you could receive upwards of $50,000. Let's face it, the profits are worth it! THEY'RE TREMENDOUS!!! So go for it. Remember the 4 points and we'll see you at the top!

I N S T R U C T I O N S
==========

Follow these easy steps to achieve maximum results:

In the MULTI-LEVEL MAIL ORDER MARKETING BUSINESS, we have a method of raising capital that works 100% every time! I am sure that you could use $50,000 to $125,000 in the next 20 to 90 days. Before you say "NO WAY", PLEASE STUDY THIS PROGRAM CAREFULLY.

THIS IS *NOT* A CHAIN LETTER, but a legal, money-making opportunity. Basically, this is what we do: As with all multi-level businesses, we build our business by recruiting new partners and selling our products. We do this through regular mail or through the information superhighway - the Internet. You are not involved in personal selling. You do it privately in your own home, store or office! Each $5.00 order you will receive will have a self-addressed stamped envelope in it! To fill each order, you simply put the product (a detailed report) in the envelope and mail it back. "That's it... the $5.00 is yours." This is the GREATEST multi-level mail order marketing plan anywhere!

(1) ORDER ALL 4 REPORTS LISTED AND NUMBERED BELOW IN THIS LETTER. Do this by ordering the report from each of the four names listed. For each report send US$5.00 cash and a SELF-ADDRESSED STAMPED ENVELOPE (business size #10) to the person listed and REQUEST THAT SPECIFIC REPORT. You will need all 4 reports because you will be reprinting and reselling them. PLEASE do not alter the names or their sequence other than instructed in this letter. IMPORTANT: Always provide same day service on all orders you receive!

(2) In this letter, replace the name and address under REPORT #1 with your own. Move the one that was there down to REPORT #2. Move the name and address under REPORT #2 to REPORT #3. Move the name and address listed under REPORT #3 to REPORT #4. The name and address that was under REPORT #4 is dropped off the list and is no doubt on the way to the bank. When doing this please make certain you copy everyone's name and address accurately. Only move the names and addresses. *Don't move the Report/Product positions*.

(3) Re-distribute this whole information packet (with, of course yourself at REPORT #1 position and everyone else bumped down one notch). You can do this in one of two ways:

(a) Internet : Just like I've done here, it's quick and it's virtually free... send this letter out via e-mail to every e-mail address you know or can get your hands on. There are many companies out there who sell huge e-mail address lists at very low prices. This is a great place to start! In this way you can send this letter out to virtually hundreds of thousands rather than just a few thousand as with snail mail. This will greatly multiply your profits. You can also post this letter on the internet newsgroups, the more the better for you... millions of people world-wide scan these newsgroups... take advantage of that fact.

(b) Old Fashioned Snail Mail : First, delete the words "just as I've done here" from the paragraph right above this one. Then print out this information packet and take it to your "quick print" shop. Have as many copies made as you can initially afford to print. You can always print more later. (The more copies, the bigger the discount). Send a copy of this entire package (it is all important) to everyone whose name and address you can get your hands on.

NOTE: People have reported they get more replies per hundred packets sent out if they use snail mail instead of email. It does take a bit more initial investment.

Start with friends and relatives since you can speak to them and encourage them to take advantage of this marvelous money making plan. Then as your time and finances allow, mail to anyone and everyone. You can get names and addresses from classified ads, phone books and other directories. You can also mail to small businesses whose addresses are available from their ads in the Yellow Pages and other publications. BEST OF ALL, purchase a "HOT NAME" mailing list from any of the list of brokers whose business it is to provide all sorts of mailing lists. You'll find that a good name list will make you more money than you could ever imagine... it's a great investment!

(4) Orders will soon start arriving in your mailbox for each of the 4 reports. At first, just for REPORT #1, then later for #2, #3, and #4... each of these orders will contain a US$5 bill and a self-addressed stamped envelope for you to use to mail back the requested report. It's easy!

<> <> <> <> <> <> <> <> <> <> <> <> <> <> <> <>

HERE'S HOW THIS AMAZING PLAN WILL MAKE YOU $ MONEY $:

Let's say you decide to start small just to see how it goes and we'll assume you and all those involved only sent out 200 packets each (either via e-mail or via regular mail). Let's also assume that each mailing only receives a 5% response (keep in mind that many people will send out thousands of packets instead of only 200, but for the sake of example here we'll stick with 200). With a 5% return that's 10 people who participate by sending 200 each or 2,000 total. The 5% response to that brings 100 orders. Those 100 mail out 200 each or 20,000 total. The 5% return on 20,000 is 1,000. The 1,000 send out 200,000 total and that 5% response will generate 10,000 five dollar bills for you... CASH! Your total income in this example situation:

1st Level - 10 people respond out of 200 with $5 $50
2nd Level - 10 people respond to those 10 ($5 x 100) $500
3rd Level - 10 respond to the 100 ($5 x 1000) $5000
4th Level - 10 respond to those 1000 (10000 $5 bills) $50000
======
Rounded down, this totals to $55000

Remember friends, this is assuming that 95 out of every 100 people you mail to, do absolutely nothing with this opportunity and trash it. Dare to think for a moment what would happen if everyone sent out 1,000 packets instead of 200 (very easy to accomplish that via e-mail). Believe me, many people will do just that... and more. It is to their benefit to do so! Not a bad return for such a paltry investment of time and money.

<> <> <> <> <> <> <> <> <> <> <> <> <> <> <> <>

T I P S F O R S U C C E S S
==========

Treat this as your business. Send for the 4 reports IMMEDIATELY so you will have them when the orders start coming in because: When you receive a $5 order, you *must* send out the requested report to comply with the US Postal & Lottery Laws, Title 18, Sections 1302 and 1341 or Title 39 Section 3005 in the US Code, also Code of Federal Regs. vol. 16, Sections 255 & 436 - which state that "a product or service must be exchanged for money received".

WHILE YOU WAIT FOR YOUR REPORTS TO ARRIVE:

(1) Name your new company (or use your own name if you wish).

(2) Re-arrange the names and addresses, including yours, and affix them under the correct report according to the directions, bumping off the 4th name. (If you will be advertising by snail mail, you might want to re-type that whole page where the names and addresses appear, and of course include yours at REPORT #1.)

(3) Obtain as many e-mail addresses or regular snail mail addresses as you can. If sending via snail mail, REPORT #3 (... when you receive it in the mail) will tell you where you can get great snail mailing lists.

(4) If sending by snail mail, make enough copies of this letter to fill your mailing quantity.

(5) Copy the 4 reports when you do get them so you are able to send them out right away when you receive an order.

<> <> <> <> <> <> <> <> <> <> <> <> <> <> <> <>

YOUR GUARANTEE OF SUCCESS

The check point that GUARANTEES your success is simply this: You MUST receive 15 to 20 orders for REPORT #1! THIS IS A MUST! If you don't within 2 weeks, send out more packets until you do. Then, a couple of weeks later you should receive at least 100 orders for REPORT #2. If you don't, send out more packets until you do. Once you have received 100 or more orders for REPORT #2, YOU CAN RELAX, because YOU ARE ON YOUR WAY TO $50,000! Also, remember, every time your name is moved down on the list you are in front of a different report, so you can keep track of your progress by what report people are ordering from you.

"IT'S THAT EASY".

<> <> <> <> <> <> <> <> <> <> <> <> <> <> <> <>

Now, here is the list of the 4 reports and how to order them:

(NOTE: Always send a Self-Addressed, Stamped Envelope with US$5 cash - concealed in a piece of paper, of course - in your order for each report. Order each report by NAME and NUMBER.)

* REPORT #1: "HOW TO MAKE $250,000 THROUGH MULTI-LEVEL SALES"

This report will give you the much needed information to help you in this program. It will show you how you can make a quarter of a million dollars in just 3 months. $5 cash.

Order this report from: C&J Properties
P.O. Box 5329
Clearlake, CA, USA 95422-5329

* REPORT #2: "MAJOR CORPORATIONS AND MULTI-LEVEL SALES"

Learn the money making secrets of some of the well-known
corporate giants. $5 cash.

Order This report from :
Danelash Endeavours
1453 Norma Road
Columbus, Ohio 43229

* REPORT #3: "SOURCES FOR THE BEST MAILING LIST"

You have learned the importance of good mailing lists. Here is
where you can send for superior lists. $5 cash.

Order this report from : MYGIA Enterprise
P.O. Box 424
Mifflinville, PA, USA 18631-0424

* REPORT #4: "EVALUATING MULTI-LEVEL SALES PROGRAMS"

Find out which MLM plans work, which ones don't... and why!
$5 cash.

Order this report from : Home Business Unlimited
1954 Norfolk Dr.
Lodi, CA, USA 95242

.. We wish you good fortune and prosperity!

Cheers!

C. Menefee and J. Menefee
(We're a father-and-son team - & having a ball!)

A NOTE FROM THE ORIGINATOR OF THIS PLAN
==========

By the time you have read the enclosed information and looked
over the plan and the reports you should have concluded that such
a plan, and one that is legal, could not have been created by an
amateur.

Let me tell you a little about myself. I began as an
independent small businessman in 1969. Using good business
practices I had a profitable business for 10 years. In 1979 my
business began falling off. I was doing the same things that were
previously successful for me but now they just weren't working.

Finally it hit me. It wasn't me. It's just that our economy had
gone crazy. Inflation and recession had replaced the stable
economic growth that had been with us since 1945. I don't have to
tell you what happened to the employment rate because many of you
know from first hand experience. There were more small business
failures and bankruptcies than ever before... Traditional methods
of making money will never allow you to move up or "get rich".

Inflation will see to that.

You have just received the information that can give you financial freedom for the rest of your life. With practically no risk and just a little bit of effort, you can have more money in the next few months than you have ever imagined.

I should also point out that I will not see a penny of your money or anyone else's who participates in my plan. *This one's for you*.

I've made over FOUR MILLION DOLLARS and retired from the plan after having sent out over 16,000 letter packets. I have moved to the rich side of the tracks. Will you be able to say the same in six weeks ? If you send out only one-tenth as many packets as I did, you can be a rich person.

Please follow the plan exactly as instructed. Do not change it in any way. It works exceedingly well as it is now. Remember to send a copy of all this introductory literature to everyone that you can think of. Don't feel hesitant about sending out only a few dozen packets in the beginning. One of the people that you send this packet to may send out 5,000 and your name will be on every single one of them. Remember though: the more you send out, the more potential customers you will reach. So my friend, I've given you the ideas, information, materials and opportunity to become financially independent. IT'S NOW UP TO YOU.

I am enjoying an early secure retirement on the fortune that I made by sending out packets just like this one. You too will be making easy money in three or four weeks... if you follow the simple steps outlined in this mailing. To be financially independent is to be free; free to make money decisions as you never have before, go into business, get into investments, retire, or take a vacation. No longer will the lack of money hold you back...

Will you ignore this amazing opportunity... or will you take advantage of it and change the direction of your life ? If you don't think this is a truly spectacular opportunity, then please take the time to re-read this material. You have indeed missed something. If you have any questions, please feel free to write the sender of this information. You'll get a prompt and informative reply.

My method is simple. I sell thousands of people a product for $5.00 that costs me pennies to produce and mail. Everyone involved in the program makes money for everyone else in the program. IF ANYONE MAKES MONEY, EVERYONE MAKES MONEY. I should also point out that this program is completely legal. At times, you've probably received chain letters asking you to send money but getting nothing in return - no product whatsoever. Not only

are chain letters illegal, but the risk of someone breaking the chain makes them quite unattractive.

This plan has the effect and appeal of a chain letter, but is legal since you are offering a legitimate, valuable product to your people. After they purchase the product from you, they produce more and resell the product. It's simple free enterprise at work, THE AMERICAN WAY.

As you have learned from the enclosed material, the "PRODUCT" in this plan is a series of four financial and business reports. The information contained in these reports will not only help you in making your participation in this plan more rewarding, but will be useful to you in other business decisions you make in the years ahead. You are also buying the rights to reprint all of the reports which will be ordered from you by those to whom you choose to mail this packet.

The concise one and two page reports you'll be buying can easily be reproduced at a local copy center at a cost of approximately 4 cents per page in small quantities of 200. The price goes down considerably for larger quantities of 1,000 or more. Of course you may want to print just a small quantity until the money comes rolling in. You can always call your printer with another order.

. Good luck with this plan and GOD BLESS YOU,

Edward L. Green

<> <> <> <> <> <> <> <> <> <> <> <> <>

NOTES FROM PEOPLE WHO HAVE USED THIS PLAN:

<> <> <> <> <> <> <> <> <> <> <> <> <>

"THREW IT AWAY"

"I had received this program before. I threw it away, but later wondered if I shouldn't have given it a try. Of course, I had no idea who to contact to get a copy, so I had to wait until I was emailed another copy of the program. Eleven months passed, then it came. I DIDN'T throw this one away. I made $41,000 on the first try."

Dawn W., Evansville, IN

"NO FREE LUNCH"

"My late father always told me, 'remember, Alan, there is no free lunch in life. You get out of life what you put into it.' Through trial and error and a somewhat slow frustrating start, I finally figured it out. The program works very well, I just had to find the right target group of people to email it to. So far

this year, I have made over $63,000 using this program. I know my dad would have been very proud of me."

Alan B., Philadelphia, PA

"IT WAS TRULY AMAZING"

"Not being the gambling type, it took me several weeks to make up my mind to participate in this program. But conservative as I am, I decided that the initial investment was so little that there was no way that I could not get enough orders to at least get my money back. BOY, was I ever surprised when I found my medium sized post office box crammed with orders! I will make more money this year than any ten years of my life before."

Mary R., Lansing, MI

"AWESOME"

Do you have any idea what 11,700 $5 bills ($58,000) look like piled up on a kitchen table? IT'S AWESOME!

Christopher E., Seguin, TX

"GAVE MY DAD A FUTURE"

My father worked hard for years to support Mom, me and my two sisters. After the kids had grown up and left, he was looking forward to retirement. Then his plant closed. He borrowed against the house to keep going while he looked for work but nobody would hire someone his age. About then I saw this plan on the Internet, printed it and mailed it to him. In desperation, he sent out 150 letters. The response was good so he mailed out a thousand more. Now he has paid off the house and the car, and he and Mom are planning how to enjoy his retirement after a few more mailings. This plan has given my Dad a new future.

James N., Sacramento, CA

5252. Morse Code Program

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-07 00:00:00 UTC

I am looking for a morse code program that will work with Windows 95. I have an older version of Super Morse but it does not sound right on my new computer. The speed does not sound the same as on the slower machine I used to have. Thank you for any suggestions you might have.

>one. This a new one on me so feel free to offer any ideas. Tnx de
>David N9VFR :-{

I can think of several possibilities, but none of them have a good prognosis for your antenna system. One, your rig on ssb may be putting out a lot less wattage than it does on cw, and whatever meter you're using gives a more accurate reading on cw. 2.) some component in your tuner is breaking down under the load from cw. The implication of course is that you should use CW as the mode to get a reasonable match with your tuner. If you can't, get a new tuner if you need one.

I also suggest you get a power output meter, which gives you a forward and reflected reading to make swr measurements. It's a relatively trivial thing to figure out your SWR if you know the forward and reflected power. The formula is also given in the handbook, and in the ARRL handbook. You can even use my basic rule of thumb, and not bother with the formula. If the reflected power is over 10% of the forward, your swr is too high, and your output transistors aren't putting out full output power, if there is a protection circuit. Bird & Coaxial dynamics both make good basic meters and they both give relatively accurate forward & reflected power readings. 73 de n8blk/3 -art clemons-

5254. Morse Code Program

5255. Think about this

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-07 00:00:00 UTC
From: "Jeremy R. Wirtz" <wirtz@ix.netcom.com>
Message-ID: <33206C2F.7A6C@ix.netcom.com>
Source record: 203016

When I got introduced to Amateur Radio, I was only 17 years old. I was into the whole CB crowd, and my parents wanted me to get out of it. When I asked them why, they told me that it was because of the foul language, and the overall lack of regulation that they thought I should do something better. That is when they introduced me to a friend of theirs who was a Ham. At first, I thought that Ham was kinda dull and boring, but as I watched and listened to what was going on, I noticed that there seemed to be a real bond between all of the Hams. For that reason, I decided that I would take the tests, and attempt to get my ticket. Needless to say, I got it. Just because I didn't have to take a Morse code test, does that mean that I am not a ham? Does that exclude me from the hobby? No. During the countless hours of listening and watching this Ham, I found that he was BOTH utilizing voice AND code. One of the things that I liked, and still like, about Ham Radio was the tradition and brotherhood. As of late, after reading a lot of the posts in this newsgroup, I have felt really bad that some people have lost sight of this, or never saw it. Granted, technology advances, and there are new toys for us to play with, but we can't forget where we came from! People can CHOOSE, right now at least, weather or not they would like to use the Morse code to communicate with someone, or if they would like to just use voice. Hams can CHOOSE to use store bought equipment or build their own. That is the great thing about our hobby. You have choices of what YOU, as an individual, want to do. Who cares if the military has phased out Morse code? Why should we do the same thing that the military does? Would you want to do everything that they do? I know I wouldn't. In my time in the Army, I worked on Microwave systems, and saw a lot of really wacked stuff that the military did. Why would you want to be like the military? Besides, we ARE NOT THEM! We are a bunch of individuals who want to do with our hobby what we like. Make a choice. As far as radio equipment, who cares if someone uses a store bought rig, or builds one on their own? That is another choice that you can make for YOURSELF. I have built many things, but I still PREFER to use what I bought at the store. That is my choice. Just think about this; Ham radio is a hobby. Hams are like a fraternaty that has been around for years. We need to look at ourselves and realize what we are doing. Kids these days, and this is an opinion, probably don't want to get into Amateur radio because it isn't the same as it was when we all got into it. The friendship part is slowly disapating, and we are starting to look like CB did when it was deregulated. I know that we don't want to end up like that. Ham radio is a special group of people who CHOOSE the hobby. Nobody forced you to become a Ham, and if you don't like something about the hobby, nobody is forcing you to continue. I just feel bad that we can't just get along without ripping on other Hams, and giving people flack. We are supposed

to be like a family!

5257. Help w/ Yaesu FT-50r Cellular Mod

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-07 00:00:00 UTC
From: McGill <mcgill@ott.net>
Message-ID: <33209019.7152@ott.net>
Source record: 203018

I have a FT-50r that I have successfully done the Mars/Cap mod on but I cant seem to figure out the Freeband mod (the mod that allows you to receive in the cellular band). The Freeband mod that I have been following is listed below. If anyone has any suggestions they would be greatly appreciated. Please e-mail responses to: mcgill@ott.net

Yaesu FT50R

-Perform Mars/Cap mod by removing solder blob 1
-Buy the ADMS-1C computer kit
-dump your radios data into the computer & save file #1
-dump computer data #1 to radio, and pull plug out of radio before its complete
-turn radio off, push and hold knob and lamp and turn on again
-dump radio data into computer and save file #2
-merge file #1 into file #2
-dump file #2 into radio

What you end up with should be:
-your original radio memories and settings
RX 76-540 590-999 cellular included
TX 120-220 350-500

This mod restores cellular, and wipes the Mars/Cap band limiting info. Transmitter will lock over the entire range & transmit to a nearby scanner, but I dunno what power output or spectrum quality is like

(touching speech deleted)

Well Jeremy, sorry to burst your bubble, but Ham radio is supposed
to be a *service*, not a hobby.
And who cares? Well, the government cares. Like most hams, you
don't understand the concept, and have reached the wrong conclusions.
This Service is not here primarily for our enjoyment, or so we can make
all these wonderful choices you describe, but most hams think it is.

You passed the test, that's good, now go back and read what you
then memorized. Pay attention to the 4 areas which describe what
ham radio really is supposed to be.

* Hams rise to occasion
* Little LEO battle moves to next level
* RS-16 in orbit!
* FCC proposes spread spectrum changes
* Another successful Mir QSO
* JAMSAT helps fill funding gap
* ARRL debuts new CD, books
* FAR offers scholarships
* YHOTY '97 nominations open
* Call sign update
* Solar update
* IN BRIEF: This weekend on the radio; Gettysburg gaining on WIPS; 7O1A QSOs disallowed for DXCC; HAARP test QSL info; Nonham?; Thanks, MFJ, Alpha-Delta!

HAMS RISE AGAIN TO PUBLIC SERVICE CHALLENGE AS STORMS SWEEP SEVERAL STATES

Hams pitched in to volunteer as storms and floods hit several states in recent days. As severe storms were spotted across parts of the southern US, hams activated Skywarn nets to aid the National Weather Service in tracking the systems. In Arkansas, several tornadoes ripped through Arkadelphia and elsewhere on March 1. Arkansas SEC Jim Blackmon, KB5IFV--who lives in Arkadelphia but was not seriously affected by the twister--reports that up to 30 hams mobilized within an hour of the tornado that devastated a swath two city blocks wide. (Later reports indicated that as many as 60 hams were pitching in.) Hams accompanied Office of Emergency Services (OES) teams on search-and-rescue missions. Hams accompanied damage assessment teams and Red Cross workers March 2.

Hams also helped provide communication and other services at Salvation Army shelters that were opened to take in those whose homes were destroyed. An HF link was maintained between Arkadelphia and the capital of Little Rock. Blackmon also reports that hams also helped a National Guard unit that got

local radio stations KVRC and KDEL back on the air using a military generator, and he expects hams to be active in recovery efforts over the next week or so. Arkadelphia's underground telephone cabling kept most telephone service up and running--with the exception of the hardest-hit area, which still has overhead lines. Arkansas SM George Mitchell, KI5BV, praised the organization and "first-rate work" of the hams working emergency duty.

In Ohio, where floods struck last weekend, SEC Larry Solak, WD8MPV, reports 14 counties have been declared disaster areas. Shelters were opened in at least three counties. Solak reports that approximately 200 Ohio hams turned out to help Red Cross personnel and the National Guard with emergency operations and damage assessment. Other hams in central Ohio were reported to be standing by to help, if needed. Because many of the flooded areas were isolated and not heavily populated, details are sketchy. Hams also were reported working at the state Emergency Operations Center as well as at county EOCs. And ham radio has filled the communication gap in those areas of Ohio where phone service was out.

Hams also have been reported responding to storm emergencies in Kentucky.--Jennifer Gagne, N1TDY

LITTLE LEO BATTLE MOVES TO NEXT LEVEL

Proposals by the low-Earth-orbiting satellite industry--the so-called "Little LEOs"--to share spectrum with Amateur Radio at 146, 220 and 440 MHz were among those turned in this week to the FCC advisory committee that's planning for WRC-97. But the Little LEO proposals were not scheduled for inclusion in the committee's recommendations, because the working group involved did not agree to do so. The various informal working groups that have been sorting out numerous proposals for possible consideration at World Radiocommunication Conference 97 offered their reports March 5 to the FCC's WRC-97 Industry Advisory Committee. The report of Informal Working Group (IWG) 2A, which wrangled with proposals involving mobile-satellite services, includes the Little LEO's controversial "flexible allocation" plan to share spectrum with amateurs and others--but only as an annex to the report that also includes the objections raised by other participants, for consideration and disposition at a higher level.

As part of their flexible allocation strategy, Little LEO interests last month proposed including 219-225 MHz in their list of desired allocations for the nonvoice, nongeostationary (NVNG) mobile-satellite service. Little LEO targets now include 146 to 148, 219 to 225 and 430 to 450 MHz. The ARRL and AMSAT were among those objecting.

The Little LEO flexible allocation strategy for WRC-97--submitted as IWG-2A/86 (Rev. 6)--is to propose broad allocations. The apparent theory is that most administrations would find reasons to oppose Little LEO use of specific bands in the crowded spectrum below 1 GHz, but that a broad allocation would permit different implementations in different countries, depending on local circumstances. At a February 13 IWG-2A meeting, a coalition of spectrum interests--including land mobile, amateur,

broadcasting, and military--opposed the flexible allocation concept on several grounds.

IAC Chairman Scott Harris told participants at the March 5 meeting that the committee was only advisory, and that the government will make the final decision on its ultimate WRC-97 positions. The Final Report of the Industry Advisory Committee is expected to go to the FCC in about two weeks.

RS-16 SATELLITE IN ORBIT!

Sources at AMSAT report that a new Russian Amateur Radio satellite--designated RS-16--has been launched from the Svobodny Cosmodrome as part of a Zeya satellite package. RS-16 reportedly has an average orbital altitude of 276 miles, producing a footprint some 2000 miles in diameter on Earth.

On March 4, 1997, 1614 UTC, Jim White, WD0E, reported hearing strong signals from the RS-16 CW beacon on 29.408 MHz. Others in the US and Europe have reported strong signals on 10 meters. The transponders are not yet active. The twice-delayed launch had been expected as early as December. RS-16 is expected to be a Mode A (2 meters up/10 meters down) satellite, like RS-10 and RS-15. It's the first Russian satellite to have a 70-cm beacon, but that beacon is not yet operational. Beacon frequencies are 29.408, 29.451, 435.504 and 435.548 MHz.

When the transponders are operational, the RS-16 frequencies are expected to be: uplink, 145.915 to 145.948 MHz; downlink, 29.415 to 29.448 MHz. Transponder power output will be 1.2 or 4 W. Orbital elements and additional information will be announced as they become available.

FCC PROPOSES CHANGES IN SPREAD SPECTRUM REGS

Responding to a petition for rulemaking from the ARRL, the FCC has proposed in WT Docket 97-12 to adopt changes in its Amateur Service rules governing spread spectrum. In spread spectrum, the energy of the transmitted signal is distributed among several synchronized frequencies within a band and is reassembled at the receiving end. This reduces power density and duration of a transmission on a particular frequency and lets spread spectrum almost invisibly share the same spectrum with users of other, narrowband modes. Spread spectrum also provides improved communication under poor signal-to-noise conditions and in the presence of selective fading and multipath propagation, and the ability to accommodate more communication channels operating simultaneously in the same spectrum.

The League's December 1995 petition asked the FCC to relax its rules to give Amateur Radio more opportunities to contribute to the development of spread spectrum techniques. Specifically, the League sought to have the FCC relax restrictions on spreading sequences and asked for greater flexibility in spreading modulation. In response, the FCC now has proposed to drop rules restricting amateur stations to transmitting only frequency-hopping and direct-sequencing spreading techniques. As requested by the League, the FCC also has proposed to require automatic power control for spread spectrum transmitters, to ensure use of the minimum power level needed to carry out

communication.

The FCC also went along with the League's request to permit brief test transmissions using spread spectrum and to allow international spread spectrum communications between amateurs in the US and those in countries that allow hams to use spread spectrum. The current rules allow only domestic communication.

The use of spread spectrum techniques was first approved for Amateur Radio in 1985 for bands above 225 MHz and at power levels up to 100 W, and there has been some experimental amateur operation since then. The FCC also has authorized Special Temporary Authority (STA) in some instances to allow broader SS experimentation. Since spread spectrum was introduced in the Amateur Radio service, commercial spread spectrum applications have been developed, including personal communication services, remote meter reading and position locating. But, the League had argued that rules limitations held back further spread spectrum experimentation. No changes are proposed in the frequency bands where spread spectrum is permitted.

The FCC said the rule amendments would "increase spectrum efficiency and allow amateur operators to contribute to technological advances." Comments on the NPRM in WT Docket 97-12 are due May 5, with reply comments due June 5.

ANOTHER SUCCESSFUL MIR QSO! SIX MORE SCHOOLS SLATED FOR MIR CONTACTS

As another school delights over its success in talking with ham-Astronaut Jerry Linenger, KC5HBR, aboard the Russian Mir space station this week, more schools have been put on the list for scheduled Mir QSOs.

On March 4, students at Perryton High School, in Perryton, Texas, got to talk with Linenger during a ten-minute pass. An audience of more than 200 was on hand, and all high school classrooms plus fourth, fifth and sixth grade classrooms in another nearby school were wired in to listen to the QSO. Reporters from reported two TV stations, a radio station and a newspaper also attended. Said volunteer Jerome Doerrie, K5IS, "After years of Cold War ideas, the community is seeing Russia-US relations in an entirely different way." (Doerrie is the husband of Perryton teacher Bobbie Doerrie, N5IS.)

Other Round 1 schools include United South High School, Laredo, Texas (March 11) and Booker T. Washington High School, Houston, Texas (March 17).

The SAREX/ARISS Working Group hopes to have 15 more schools scheduled with Linenger over the next six weeks. The ARRL's Educational Activities Department has sent lesson plans to each school.

Round 2 Mir school QSOs have been penciled in for sometime between March 20 and April 20, 1997. On the list are Alaieden Middle School, Alaieden, Michigan; Lexington High School, Lexington, South Carolina; Holy Angels, Dayton Ohio; Thomas Jefferson Middle School, Teaneck, New Jersey; Jerling Junior High School, Orland Park, Illinois; and Shell Beach Elementary School, Pismo Beach, California.--Glenn Swanson, KB1GW

JAMSAT HELPS FILL PHASE 3D FUNDING GAP

The Japanese AMSAT group, JAMSAT, has transferred $50,000 to AMSAT-NA to help complete, test and launch the Phase 3D satellite. The money represents excess donations from JAMSAT members for the SCOPE camera, which is to fly on Phase 3D. AMSAT-NA President Bill Tynan, W3XO, sent a letter of thanks sent to JAMSAT President Tak Okamoto, JA2PKI, expressing appreciation for the donation at a time of mounting expenses. "JAMSAT's assistance at this time represents a major step to assuring success of the project that volunteers from many nations have been working on for the past seven years." The completed SCOPE camera, designed and built entirely by JAMSAT, was brought to the Phase 3D Integration Laboratory in Orlando, Florida, February 28 by Yoshiyuki Takeyasu, JA6XRQ. It was installed and successfully powered up March 1.--AMSAT News Service

ARRL DEBUTS NEW CD, BOOKS

Now you can just say "know" to CW with Your Introduction to Morse Code on audio compact disc. The CD has the same fine quality you've come to expect and enjoy on audio cassette, with the convenience of CD tracks that make it easy for students to easily find and repeat any section. Your Introduction to Morse Code was created using digital recording techniques for improved sound quality and integrity. Your Introduction to Morse Code is $12. Item 5811 teaches all you need to know to pass the 5 WPM code test. The ARRL Code Practice Set CD, item 5706, for 15 to 22 WPM practice also is available. (Cassette tapes are still available.)

Packet radio is hot, and APRS--the map-based tracking system--is even hotter. Get in on the excitement with Getting on Track with APRS: A Hands-On Guide to the Automatic Packet Reporting System, by Stan Horzepa, WA1LOU. This book takes beginners step-by-step through installation and operation of APRS, for all computer platforms. Getting on Track with APRS is $14.95. Order item 5854.

Personal computers have had a lot of impact on ham radio. Whether you're a computer whiz kid or just bought your first PC, there's something for you in Personal Computers in the Ham Shack, by Paul Danzer, N1II, and Rich Roznoy, K1OF. You'll learn about how to choose an operating system, operating digital modes, logging, using the Internet, testing new antennas, circuit design and more. Explore how to enhance your enjoyment of ham radio with your other favorite hobby--computers. Personal Computers in the Ham Shack is $15.95. Order item 5714.

Attractive new pins proclaiming your operating accomplishments are now available from ARRL. Order either the Five-band Worked All States (5BWAS) or Worked All States (WAS) pins. Either is a great hamfest accessory. The WAS pin, item 6117, and the 5B WAS pin, item 6125, are each $5, postpaid.

Buckmaster's HamCall CD-ROM also is available from the ARRL. The latest version includes more than 3000 photos of hams, plus complete US and extensive international listings--nearly 1.4 million call signs in all. You can look up US calls by call sign, name, address, city, state, ZIP, call sign suffix, and country. The Buckmaster HamCall CD-ROM, item 1778, is

$49.95.

You can also get the brand-new RSGB IOTA Directory and Yearbook--1997, edited by Roger Balister, G3KMA. This is an essential aid in chasing those rare and elusive islands. It's item 6079, and the price is $15.

For more information on ARRL books, CDs, CD-ROMs and other products, see our catalog on the ARRLWeb page at http://www.arrl.org/catalog/. To place orders, call 860-594-0250; e-mail pubsales@arrl.org.

FAR OFFERS SCHOLARSHIPS FOR HAMS

The nonprofit Foundation for Amateur Radio Inc--an ARRL-affiliated federation of more than 75 radio clubs in the Washington, DC, area--plans to administer 60 scholarships for the 1997-98 academic year to help licensed radio amateurs with their post-secondary education. Five of the scholarships are fully funded with income from grants and the foundation's annual hamfest in Gaithersburg, Maryland. FAR administers the remaining 55 scholarships without cost to the donors.

Licensed hams are eligible to compete for these awards if they plan to pursue a full-time course of study beyond high school and are enrolled or have been accepted at an accredited university, college or technical school. Awards range from $500 to $2500, with preference given in some cases to those pursuing certain courses of study or to residents of specific geographical areas (Delaware, Florida, Maine, Maryland, New Jersey, Ohio, Pennsylvania, Texas, Virginia and Wisconsin). Application forms and additional information are available by letter or QSL postmarked prior to April 30, 1997, from FAR Scholarships, 6903 Rhode Island Ave, College Park, MD 20740. Contributions to FAR are tax-deductible.

YOUNG HAM OF THE YEAR '97 NOMINATIONS OPEN

The nominating period is now open for the 1997 Young Ham of the Year (YHOTY) Award. In cooperation with Yaesu USA and CQ magazine, Newsline presents this award annually to a young ham who has contributed to his community or the nation using ham radio.

To qualify, a nominee must be 18 or younger, be an FCC-licensed radio amateur and reside in the continental United States. More information on the award and an official nominating form is available at http://rrnet.com/rrra/newsline (scroll down and click on "Young Ham of the Year Award 97").

Award information and a nominating form also is available by sending a self-addressed stamped envelope to the 1997 Young Ham of the Year Award, Newsline, 28197 Robin Ave, Saugus CA 91350.--Amateur Radio Newsline

FCC ISSUED CALL SIGN UPDATE

AT THE BOTTOM OF THE SOLAR BARREL

Sun watcher Tad Cook, KT7H, in Seattle, Washington, reports: There was no change in solar flux or sunspot activity last week, as we continue to experience the bottom of the solar cycle. There were some geomagnetic disturbances though, with the worst conditions on February 28, when the planetary A index reached 32 and the highest planetary K index was 6. Over the next few weeks the geomagnetic field should stay predominantly quiet, except that a recurrent coronal hole with high speed solar wind could rotate into view around March 26 and 27. Solar flux should stay in the low to mid 70s, with the sun mostly spotless.

Last week, this bulletin reported that the solar flux on February 26 was 74. A closer approximation is 73.8 for that date. This does not change the average flux for the week.

Sunspot numbers for February 27 through March 5 were 0 each day with a mean of 0. The 10.7-cm flux was 73.8, 72.8, 73.5, 72.3, 74, 74 and 74.6, respectively, with a mean of 73.6. Estimated planetary A indices for the same period were 20, 32, 10, 12, 5, 4, and 7, respectively, with a mean of 12.9.

IN BRIEF:

* This weekend on the radio: The Young Amateur's Contest; Wisconsin QSO Party. See March QST, page 98, for details.

* Gettysburg gaining on WIPS: The FCC office in Gettysburg, Pennsylvania, reports today that personnel are working on the vanity work in process

(WIPs) of Janunary 21. The FCC last processed vanity call sign applications on February 12. --FCC

* 7O1A QSOs disallowed for DXCC: In the wake of questions raised about the status of the December 1996 7O1A operation from Aden, Yemen, the ARRL has been in touch with the Ministry of Communications in that country. The Ministry of Communications in Sana'a, capital of Yemen, has advised the ARRL DXCC Desk that, while it is aware of a document issued by its Aden office, the Ministry of Communications in Sana'a--as the main body responsible for communications--never issued an official authorization for Amateur Radio. Therefore, the 7O1A operation cannot be accepted for DXCC credit. For more information, contact Bill Kennamer, K5FUV, bkennamer@arrl.org.

* HAARP test QSL info: Reception reports for the HAARP listening test March 8 (2330 Eastern Time on March 7) mentioned in The ARRL Letter (Vol 16, No 8) should be sent to: High Frequency Active Auroral Research Facility, Box 271, Gakona, AK 99573. Include your copy of the CW text transmission along with signal strength observed during the constant carrier periods. A description of the antenna and receiver used would be useful but is not required.

* Nonham? Gary Huntress, who won the $100 Mike Cook, AF9Y, weak-signal challenge got a chuckle out of being called a "nonham" in our recent report (see "Copy this weak signal and WIN $100," The ARRL Letter, Vol 16, No 6). He'd like to think he's at least a journeyman or apprentice. "When I was growing up, I spent many hours with my dad (WA1OHA) in his shack, with all of his many local buddies at the Texas Instruments ham shack and at ham fairs," he says. He started out as an SWL using Hallicrafters receivers, has done a lot of tower and tree climbing and experienced ham radio at close range through his dad's activities. But he says his CW never got much above 7 WPM, and he never got around to getting a ticket. (The AF9Y challenge remains. See http://www.webcom.com/af9y/ for details.)

* Thanks, MFJ, Alpha-Delta! MFJ--which celebrates 25 years in business this year--has graciously donated an MFJ-1278B TNC to W1AW for use as part of the HF digital visitor operating position. Installed in the TNC is the MFJ DSP unit, scope adapter, and 9600-baud modem. The TNC software is MultiCom for Windows ver. 1.2. Alpha-Delta has donated a Model VRC variable response console speaker for use at W1AW.

>other gross thing to do), but if you did not do it you were not in
the
club.

But the US government wasn't in the business of issuing licenses for

admission to the club and the clubhouse (frequency spectrum) was not

publicly owned.

Hazing rituals are fine for private clubs, but not for public radio
frequencies.

-Drew in Sunny Central Florida-
CB Radio KADF-6895 since September, 1976
Amateur Radio KF4DDM since September, 1995
Kill the code requirement or kill the hobby. Your choice.
Radio Personality since August, 1983
Scanner Freak since portable radios with "Police Band" were
high-tech
Check out my SEVENTIES Web site at http://167.142.101.43/drew/

I do not see the problem with a no code license in HF. Isn't certain
part of
the bands set aside for CW anyway. That way the CW crowd is isolated
from
the Voice etc. crowd. If you do want to talk CW learn without it being
a requirement.
It's a hobby and everyone has the freedom to enjoy it to his \ her own
end.

I am learning CW because right now I would like HF access and it's a
req. but
I still would learn it even if it is not, it is just fun.

>Looking forward to getting my 5WPM , but, the question is;
>Is it worth it? At 5WPM there isn't much space in the HF
>band that you can use, "You have to get your 13WPM".
>There isn't much else for the techs.

Just do it. In the time that it took you to write that message you could have learned three letters!

Only YOU know if it is worth it, the question is: HOW BAD DO YOU WANT IT? That's what it boils down to.

We Americans have a moral obligation to show the rest of the world how to live properly. We have been trying to get the rest of the world to stop wallowing in filth and ignorance and learn to live like true human beings. When we allow our standards to be compromised we are actually hurting inhabitants of less fortunate nations as well as ourselves. I am proud to be an American and I feel sorry when I hear about others who cannot provide for their families as well as we do. If these people would just follow our example then they would come to know the joy and fulfillment that comes from living a correct lifestyle. Then they can stop begging and complaining about us "ugly Americans". Teaching by example is the best form of education.

Never said I was going to. Merely stated that I was surprised that local homosexual-rights groups didn't. In fact, had you bothered to read my post (reading doesn't seem to be one of your strong points, not that I am surprised, since you'd have to pick your knuckles up off the ground in order to turn the pages of a book and all...) I stated that >I< would never do such a thing, because people have done the same thing to me.

Naturally, a much more effective method of bringing pressure to bear would be for homosexual-rights groups to openly boycott the customers (advertisers) of your radio station, and let the advertisers know why they are being boycotted. Economic impact is much more effective than a mere letter-writing campaign. If I really had the inclination to harass you, Spew, that's how I would do it, but as I've said before, I'd much rather spend my time with my kids than you, Keikikane.

>Your attorney must have advised you that it wouldn't be a wise move, huh?

My attornies advise me of many things. Unfortunately for your ego, you're not one of them, and are not likely to be anytime in the near future, either.

Hi, Rick

Try my upgraded Morse Code program, International Morse Code Processor
(IMCPW312.ZIP), at

http://www.simtel.net/pub/simtelnet/win3/ham/imcpw312.zip

Below are its major features:

IMCPW (International Morse Code Processor for Windows) v3.12 is a
Windows 3.1 & 95
compatible program which translates program-generated/user-defined text
and text
files to Morse code. Code speed is adjustable from 3-50 wpm with a
character speed
of 10-50 wpm for Farnsworth code. Keyboard Copy window included for
copying code
from the keyboad. "Barred" characters implemented. User can define any
prosign.
Includes a comprehensive help facility, a main menu, three popup menus,
and eleven
code practice lessons. It is Fully customizable from the Options menu. A
Sound

card is not required. Requires 870K of free hard disk.

73,
Lindsay
WA4ISZ

>That's probably because you have neither the technical knowledge
>nor the equipment to realize that they are there. Ever hear of
>Skipnet? It's that noise you don't understand down there among
>the antique beeps.

As I said, I never encounter them. That's quite a bit different than
saying none exist.

I'd wager that if I said "It's daytime" you'd counter with "Depends
on where you're at."

>>has. There are five services, Drew: Four under the DoD, and one under
>>the DoT.

>What about the National Guard? There are 50 of those, each (theoretically)

Each falling under a state DoD, not *the* DoD.

>an independent military force, at least until the shooting starts. Then,
>like the Coasties, they fall under the command of the real military.

While in the USCG, my ID card was identical to those belonging to,
as you say, "the real military": ``ARMED FORCES OF THE UNITED STATES''
scrawled across the top of the card. Coasties fall under the UCMJ
in case you weren't aware.

The National Guard units will fall under the command of the Army;
the Air NG units will come under the Air Force.

>The Marine Corps is under the Department of the Navy.

But their mission is different enough from the Navy that it's commonly
accepted that the Marines form a seperate force. You'll see all *five*
services represented during any national celebrations or Presidential
events.

>Coasties come
>under Navy control during military operations too.

Only when so ordered by the President.

Using your logic we could say there is only one military force: The
DoD.

>Hmmm. This brings back the sugestion of replacing the code requirement
>with a requirement that the applicant show proficiency in his choice
>of morse code, smoke signals, or jungle drums.

Ridiculous. I don't hear anyone using smoke or drums on HF, but I do
hear about half the QSOs being conducted via Morse.

>It is easy to come up with examples of hobbies where one does not
>need to understand every aspect of the hobby in order to enjoy it.
>In fact, I can't come up with a single hobby, including ham
>radio, where it is necessary.

You're not trying hard enough. Most private pilots consider their
sport also a hobby. And most will strive to learn as much about
flying, meteorology, navigation, and airplanes as possible, not only
to enjoy flying more but to make them a safer pilot.

>Are you suggesting that becoming educated is a hobby?

Does that seem so strange to you? Do you only read a book if it's
required for work or school? There are folks who continue their
education on their own just for pleasure.

In this hobby, you'd better educate yourself regarding HV safety
and RFI. And if you intend on building radios, then you will have to
consider becoming educated as an important portion of this hobby.

>Seriously, there are many, many courses that you can take if you
>want, but are not required.

But if you want any degree you'll have to take courses that you
might not care for.

>By your argument, you would have
>everyone take everything.

Such a person would be quite knowledgable, yes?

>Are you suggesting that those who don't want the code requirement
>are trying to ban code? Far from it. I've never heard of anyone
>trying to do that.

Keep reading - there are such folks out there.

>While we're at it, since modern radios have integrated circuits,
>why not require applicants to show a certain level of proficiency
>at designing and building them (at least on an emulator)?

Good idea. I'm for anything that will get more folks building radios rather than buying them.

>As for myself, I don't have a license. I seriously looked into it
>and decided not to bother until such time as I don't have to
>learn code (actually relearn, as a boy scout I could send and
>receive code by lights and flags).

Well, over 97% of the US amateur spectrum up through the 23cm band is available to you sans a code test, so I doubt your seriousness.

greetings
i just purchased a cordless phone, 800 mhz, and just realised that it
uses a nickel metal hydride battery. I am not complaining. It is
just that how I am going to have to learn about nicket metal hydride
batteries, hi.
So far I am developing an expertice on nicad batteries,
http://home.sprynet.com/sprynet/lar01/nicad.htm
now I am going to have to learn about these new? ones, hi.

Public service events to provide all types of comm services, and
general volunteer support including first aid, general assistance,
equipment repair services, including at:
- Seattle Marathon (about 75 ham positions, 7000 runners and awful weather Sat. after Thanksgiving)
- AIDS Walkathon
- Numerous bicycling events (100 mile rides, typical)
- Running races
- Public events including parades, air shows

Government directed "RACES" communications including:
- extensive search and rescue communications support (more people die hiking in the Washington Cascades each year than die hiking in all the other lower 48 states combined); in fact, ham radio is practically the "standard" solution due to the difficult locations
- Police and fire department auxiallary communications. Last year, during flooding, hams were airlifted to a town that was cut off and which had lost its 911 service. The hams provide communications out to the 911 center outside the disaster center. I've answered 911 calls at a remote mountain community when their phone cable to the outside world was cut. Hams staffed a local phone in the community and use both Police, Fire and Amateur radio equipment to maintain contact with dispatchers located 40+ miles away.
- U.S. Navy requested support (60+ hams each day) for an airshow with an estimated 300,000 attendees over 3 days
- U.S. and State Forestry department requested communications during forest fires. We know of one instance where the commander of the fire fighting operation moved the base camp to the place that provided the best Amateur Radio communications. (I am not making that up).

That's a small sample.

SILENT KEYS

VK2LSH John, or Swampy as many knew him, died on Tuesday Morning 25th February 1997 at 8:30am. It was a terrible shock to many radio operators in the Hunter Region.

John was a friendly bloke who would help anybody. Our best wishes go to John's family and friends. The radio is considerably quieter this week and we have lost a good mate.

-- VK2ON Aaron & VK2MSD Steve

The late Arthur Harris VK2FFH, a founding member of Fisher's Ghost Amateur Radio Club Inc. passed away last Friday night (28/2/97) just minutes before starting the Club's 80 Metre Net. He will be missed by family and friends. Lest We Forget.

-- Chris Newton VK2ZCJ

Vale John VK2LSH and Arthur Harris VK2FFH

During the month of March, the Fisher's Host ARC Inc will hold a special event award in memory of Arthur Harris VK2FFH. All contacts to be with the club station VK2FFG on 3.580 MHz. The cost of the award is $5.00 Aust. and applications to be sent to the Awards Manager, FGARC Inc., PO Box 35N North Campbelltown 2560. Note: all funds will be donated to Arthur's wife, Bid Harris.

-- Chris Newton VK2ZCJ, FGARC Publicity Officer

DIVISIONAL NEWS

Because the last Sunday in March is Easter Day, the March Trash & Treasure Sale will be held on the Sunday After Easter - that's the 6th of April.

The next examinations will be held at Amateur Radio House Parramatta on Sunday 23rd March 1997. Candidates who have lodged applications are requested to report at 12 noon, and the exams will start as soon after that time as possiblem but no later than 12.30pm.

Please apply to the office for the necessary forms. Applications close on Thursday 13th March. Acceptance cannot be guaranteed for any applications received after that date.

--Submitted by Eric Fossey VK2EFY - Divisional Secretary.

THE AFFILIATED CLUBS NET IS BACK

The Affiliated Clubs Net is to be resumed on the third Wednesday of the Month commencing 19 March at 7.30 pm EST on 3.595 MHZ plus or minus QRM.

So clubs I hope to see at least one and possibly more from each club on air.

--Ken Westerman VK2AGW, Affiliated Clubs Officer.

WICEN NEWS

This month sees the Central Coast meeting, on Friday, and the Hunter meeting, on the 17th; the latter meeting will feature a talk by Telstra. Although not strictly a WICEN event, of interest to WICEN members is the Wyangala Triathlon, in the Orange area, to be held on Sunday 16th March; enquiries are directed towards Peter VK2ETK or Adam VK2XRA. Following this is the VRA Mid Year Conference, at Wombeyan Caves, on the weekend of 22nd-23rd March, at which WICEN will be well-represented.

On 13th April is the Forster Triathlon. This is an all-day event, early morning to late evening, and about 25 operators are required for this event; food, drink, fuel and T-shirt are provided. Operators will need to bring equipment for 2m and 70cm voice, and will also need to contact Steve Pettet VK2KXQ, phone number (065) 55-3177, or PO Box 122 Forster, for further details. Following this is the Watagan Mountains Car Rally, over the weekend of 19-20th April, for which Andy VK2XRX is the contact; around 20 people are required for this exercise.

Events further away include the Bridge to Bridge Speedboat Classic, run by David VK2KLX, on 4th May; the Hawkesbury Emergency Expo, run by Alan VK2YYJ, over 16th-18th May; the Colo 24-hour Horse Enduro, also run by Alan, on 12th July, and the Oberon Car Rally, also also run by Alan, on the 11th October; the Hawkesbury Classic Paddle is organised by Kevin VK2CKD over 18th-19th October and the annual Bungonia Cave Rescue will be on the weekend following, over 25th-26th October, with either Dave VK2KFU or Mark VK2XGK in charge.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or info they would like published, then please contact the Publicity Officer. If further information about WICEN (NSW) is required, please contact the State Coordinator, Alan VK2YYJ, on 015-097-217.

WICEN (NSW) has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". It is generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics, and contains pointers to many emergency-related pages likely to be of interest.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

MAGAZINE ROUNDUP

Here again is a summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the March issues of the various magazines.

"Electronics Australia" wonders whether Pay-TV is really worth it; a case is made for more women in electronics; digital cameras are surveyed (who will be the first to use one on ATV?); pay rates for electronics technicians are discussed; the PC-driven arbitrary function generator is continued; simple noise-makers are made; and one-valve reflex receivers receive a mention.

"Silicon Chip" also wonders whether Pay-TV is really worth it; connecting computers together with wires is discussed (although the true die-hards are using NFS over RF TCP/IP); those short of sight (such as your scribe) can build a "jumbo" LED clock; a replacement for the RGB-to-PAL chip used in a previous TV pattern generator is covered; some fascinating history on radio-controlled models is revealed; a clever continuity tester is contructed; the series on digital oscilloscopes is continued; and the mysteries of grid bias are explained.

"Amateur Radio" promulgates the Morse debate; a simple signal injector is built, as is a balanced feeder balun adaptor; the Z-Match is summarised in gory detail; a computer mouse becomes a code oscillator; instant scaffolding solves an antenna problem; comments on the 6m band plan, especially alternatives to the 50.110 calling frequency, are sought; and a simple latch circuit for repeaters is constructed.

"Radio and Communications" constructs a weather satellite antenna; the dumb things that Amateurs do to their equipment are revealed; the point of moving away from a calling channel is emphasised; some variations on common tools are described; and the final word on SSTV operations is presented.

Meanwhile, on the Green front, "ReNew" (formerly known as "Soft Technology" visits homes powered exclusively by renewable energy, reports on the Sunrace '97, the Adelaide to Melbourne solar car race, presents a buyers guide to independent power supply batteries, presents a guide to soldering for the beginners, and describes a shunt regulator project for solar, wind or hydro power supplies.

Be listening next month for another summary of the local magazines.

-- Dave VK2ZTB

A REQUEST FROM THE UK...

Many of you may recall Arie VK2AVA, who was very active on 40m SSB several years ago, and was usually found working into Europe via the long path each afternoon. It appears that Arie's health deteriorated in recent years, and he has since relinquished his callsign.

One of Arie's on-air friends has been trying to get in touch with him, but so far without success. If anyone knows the whereabouts of Arie, ex-VK2AVA, and how he is, would they please get in touch with Ron, G6LX. Ron's

address is in the callbook, and he can also be reached via email at: com.tech@virgin.com

--Peter Nesbitt VK3APN

...AND A REQUEST FROM NEW SOUTH WALES

Bernie VK2VBH Desperately needs an operating manual for an SOE Suitcase Radio set. The model is a TYPE 3 Mark 2 any offers of asistance would be MORE than appreciated.

Bernie can be contacted by phone on (043) 845-442, or by fax on (043) 852-051.

-- Bernie VK2VBH

DX NEWS

SPRATLY ISLANDS - 9M6TCR and 9M6TPR camn be heard from mid March. The importance of this operation is that they will be operating from Layang Layang, which is part of the still rare Spratly Islands.

ANTARCTICA - EM1HO will be active from the Ukrainian Vernadsky Base, IOTA [Islands on the Air] AN 006, around the beginning of March. Also, 3Y2GV, heard of late on 18.090 MHz, appears to be active from the Queen Maud Base, IOTA AN 016.

SOUTH SHETLAND ISLANDS - HF0POL is active mostly on CW, 7 kHz up from the band edge and can be found on 40 meters around 0100z and later. During his daytime hours he is very busy in the camp.

REUNION ISLAND -, FR/F5MNW or TO5UFT will be active from 22nd March to 6th April, mainly on CW.

SAINT MARTIN - , FS5PL/P is active this weekend from IOTA NA 199, possibly with an FS9 callsign.

DOMINICA, J7 will be active 11th to 19th March on 40 through 10 meters, using mainly CW. There may also be some SSB activity. Callsigns to be issued upon arrival.

JAN MAYEN - JX7DFA. can be found on the lower bands. For CW, check 3512 and 1824.5 kHz. For SSB, check 3599 and 1842 kHz. There may also be some RTTY operation once an RTTY interface problem has been fixed.

AUSTRALIA - The Eastern and Mountain District Radio Club will again activate VI3GP on March 6 through 9 for the Formula One Grand Prix Race in Melbourne.

SOUTHERN COOK ISLANDS, ZK1JOO will active in Rarotonga until Monday.

-- ARRL DX Bulletin 12, dated 6th March, 1997

CLUB NEWS

VHF DX GROUP

THE VHF DX GROUP IS AN INFORMAL ASSOCIATION OF ACTIVE VHF AND UHF OPERATORS. THE GROUP WAS FORMED TO PROMOTE NON-REPEATER ACTIVITY AND TO HELP JUSTIFY OUR GENEROUS ALLCOATIONS IN THE VHF SPECTRUM AND ABOVE.

THE NEXT MEETING OF THE VHF DX GROUP WILL BE ON TUESDAY 18 MARCH AT AMATEUR RADIO HOUSE, PARRAMATTA, STARTING AT 7:30 PM.

AT THE MEETING WE WILL BE HEARING MORE ON AIRCRAFT ENHANCEMENT PROPAGATION FROM GORDON MACDONALD VK2ZAB FOLLOWING HIS INTERESTING PRESENTATION ON THE TOPIC AT THE WYONG FIELD DAY.

DON'T FORGET THE TUESDAY ACTIVITY NIGHTS ON 144 MHZ AND THE GROUP'S SUNDAY MORNING NET ON 146.550 MHZ FM AT 11.00 AM.

-- SUBMITTED ON BEHALF OF RICHARD SOULIE VK2ARS.

THE LIVERPOOL AND DISTRICT AMATEUR RADIO CLUB WILL BE HOLDING ITS MARCH MEETING NEXT WEDNESDAY NIGHT AT THE SCOUT CAMP AT GLENFIELD JUST OUT OF THE ARMY CAMP AT MOOREBANK.

THE GUEST LECTURER THIS MONTH WILL BE MICHAEL VK2MJ WHO WILL BE GIVING A LECTURE AND PRACTICAL DEMONSTRATION ON PACKET RADIO WITH PARTICULAR EMPHASIS ON NETWORKING AND LINUX WHICH IS A DERIVATIVE OF UNIX AND MIKE WILL ALSO TOUCH ON TNOS.

MIKE IS THE OPERATOR OF THE VK2MJ HF GATEWAY WHICH CONNECTS HF OPERATORS TO THE SYDNEY PACKET NETWORK.

THE MEETING IS AT 7.30 PM FOR A PROMPT 8.00 PM START. VISITORS ARE WELCOME AND COFFEE AND BICKIES ARE PROVIDED.

-- VK2TSR GARRY FOR THE LIVERPOOL AND DISTRICT ARC

ST GEORGE AMATEUR RADIO SOCIETY

AMATEUR LICENCE CLASSES

The St George Amatuer Radio Society (Inc) will be holding classes for persons interested in obtaining their amateur radio licence. These will commence on Monday 7 April 1997 and run for 23 weeks. The venue will be the St George Masonic Club, 86 Roberts Road, Mortdale between 7:30pm and 9:30pm.

Persons interested in attending should contact the club's Education Co-ordinator, Mr. Jim Button on (02) 9521-7303 at the earliest opportunity.

-- John Hams VK2JH, President.

Still with St George, the Society will be conducting the annual Alan Pettiford memorial auction on Saturday the 15th of March 1997 in the function room of the GRANDVIEWS BOWLING CLUB 821 Forest Road Peakhurst with the auction commencing at 1200 noon under the direction of our regular auctioneer Dennis.

The doors will open at 10:00am for Sellers to place equipment on display & complete registration and ticketing requirements. Buyers are welcome from 11:00am to inspect goods for auction, with the auction commencing at 1200 sharp.

All amateurs and other interested persons are welcome to attend. This is a good opportunity to bring along all that gear you didn't sell at Wyong!!.Should you require further details please contact Paul Smith VK2ZSA on 9892 0855 in business hours or 9520 7322 after hours.

-- Paul Smith VK2ZSA

ORANA REGION AMATEUR RADIO CLUB

The Bi-monthly meeting of the Orana Region Amateur Radio Club will be held on Thursday 27th March at 8 PM in the Scout Hall in Talbragar St Dubbo.

Mr, John Moss from Telstra Dubbo will talk on Fibre Optics into the 21 century.

--Article Submitted by Ken Westerman VK2AGW Dunedoo

AUSTRALIAN AMATEUR TELEVISION CLUB

THE NEXT MEETING OF THE A.A.T.C. Inc WILL BE HELD AS USUAL
ON THE 2ND SUNDAY OF THE MONTH, THAT IS MARCH THE 9TH.
AT 109 WIGRAM STREET. PARRAMATTA 1.00. TODAY IN 2 HOURS
SPECIAL NOTICE TO ALL MEMBERS ABOUT THE NEW 23cm
ATV/SATELLITE rx.

MORE WILL BE AVAILABLE IN LIMITED NUMBERS, THIS HAS FULL
TWIN CHANNEL DEMOD

THE NEXT BATCH WILL NOT BE AVAILABLE FOR SOME MONTHS.

THE MAIN LECTURE WILL BE ON THE MX10 - THE VIDEO MIXER BY VK2GIO

ALSO A TECHNICAL DISCUSSION WILL BE ABOUT THE NEW 23cm
DIGI READOUT BY MARK VK2XOF DUE TO BE RELEASED NEXT MONTH
FOR THE 23cm Rx.

THIS MEETING IS AS USUAL OPEN TO ALL MEMBERS AND ANYONE
INTERESTED IN AMATEUR OR SATELLITE TELEVISION.

FOR MORE INFORMATION ABOUT ATV. CONTACT BOB THE
PUBLICITY OFFICER ON (02) 9587-3491 DURING NORMAL CIVILISED TIMES.

-- A.A.T.C. Inc. Publicity Officer Bob Barnes. VJ2R

HORNSBY & DISTRICT ARC

The next mid-monthly meeting, is on Tuesday 11th. March 1997. At 8:00 pm. In the Mount Colah Communicty Centre, Pierre Close, Mount Colah. (Located near the Eastern Entrance to the Railway Station.) This is the Clubs informal get-together, to discuss any technical problems, that we may have encountered. The JOTA sub-commitee, will have a meeting at the same venue, we trust that all on the Sub-committe can attend. Visitors are most welcome.

Training classes, are held each Thursday, evening at 7:15 pm, the cut-off point has been reached, but for more information please phone, Tony VK2BTL on 9487-3383.

The club conducts, a net every Monday night, at 8:00pm. on VK2RNS. The frequency is 147.250 with a positive offset. Feel free to join in. All are welcome. Listeners set your scanne to 147.250. remember, we would like to hear from you, or better still we would like to see you at one of our meetings. Visitors are most welcome.

Should you wish to know more about the Club, or its activities, please write to:- H.A.D.A.R.C. at Post Box 362, Hornsby, 2077. or contact the Publicity Officer, John VK2WRT on 9807 2490.

-- John W Turner VK2WRT - Publicity Officer

GLADESVILLE NEWS

The Gladesville Amateur Radio Club Incorporated would like to remind members and visitors that the March general meeting will be held tomorrow night, the 10th. It will be at the usual venue of Number One, Birdwood Avenue, Lane Cove with a 7.30 pm start. There is a public car park opposite the venue.

For contact with Gladesville about television, taped lectures or club matters wither write to GARC Inc at P.O. Box 48 Gladesville 2111 or telephone (02) 927 0530 [repeat]

A reminder about the Test Transmissions on Wednesday, Friday and Sunday evenings via VK2RTV Channel 35 in Sydney. On Wednesday and Sunday relays are made through VK2RFM Oakdale on 1250 MHz and on the 444 MHz ATV channel through VK2RTG Central Coast and VK2TVG Sydney.

-- 73 Keith VK2ZZO President / TV Co-ordinator

If you would like to submit a news item for inclusion in the weekly
broadcast, please send it to us by one of the following means:

by post to the Divisional Office, PO Box 1066, Parramatta NSW 2124;
by fax to (02) 9633-1525;
by packet radio to BCAST@VK2WI.NSW.AUS.OC, or
by Internet e-mail to wiansw@sydney.dialix.oz.au

Please note that the deadline for news items is 2pm on the Friday
preceding the broadcast; if submitting news items by packet or internet,
please allow for forwarding delays in the network.

If submitting printed copy, please:
submit your news item on A4-size paper;
double space your text;
write on one side of the paper only, and
use a plain font such as "Arial" or "Helvetica", 12-point or larger.
This is especially important if sending your news item by fax.

Please avoid using abbreviations and shorthand, check your spelling,
grammar, and punctuation, and use the exact words you wish the
announcer to say on-air. Remember, the more care you take in preparing
your news item, the better the announcer will read it.

Here is a summary of news items covered on edition #206 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 14-Mar:
-
1. Hams Assist after Disasters Hit Arkansas and Ohio River Valley
2. New RS-16 Satellite Heard on 10 Meters after Successful Launch
3. FCC Issues Rulemaking Proposal on Relaxed Spread Spectrum Rules
4. Gettysburg Progresses on WIPS Stack, Vanity Grants to Continue
5. JAMSAT Donates $50,000 More to Help Fill Phase 3D Finding Gap
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. More Schools Added to MIREX Schedule after Another QSO Success
8. ARRL Denies DXCC Credit for Yemen 7O1A Operation
9. NASA Select TV Moves to New Satellite Home
10. "The RAIN Dial-up" from Chicago
11. Weekly Propagation Forecast
12. "Ancient Amateur Archives" with Bill Continelli, W2XOY
13. Special Event Station Calendar
-
Funding for the program's transmission and production expense was
provided this week by a grant from the Stoddard Family and users of
the N9SBH repeater, in North Webster, Indiana, where "This Week in
Amateur Radio" is heard on 224.16 MHz and on 147.445 MHz simplex,
serving North Webster, Goshen, Warsaw, Plymouth, and Syracuse.
Presentation of "The RAIN Dial-up" has been made possible by a
grant from Matt Arthur, KA0PQW, of Ellendale, Minnesota.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EST) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier. On the Internet,
audio is available each Sunday in 8-bit .WAV file format, sampled at
11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm
through the courtesy of the Blue Ridge Video and Digital Society of
```

Roanoke, VA. A separate "RealAudio" file is also available at this site. The service is carried on VHF/UHF repeaters throughout North America and on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

-

Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

5293. Re: When does next vanity gate open?

Announcing NEW
Ham Radio.FAQ

This is the second generation of the original file that was
a regular USENET posting entitled

"rec.radio.amateur.misc Frequently Asked Questions"

The NEW Ham Radio.FAQ is a HyperText document that is on the
WWW and it contains 3 chapters plus hundreds of LINKS to radio
related sites!

1 - Introduction to the Ham Radio.FAQ
2 - Amateur Radio Organizations, Services, and Data Sources
3 - Amateur Radio Advanced and Technical Questions

Please provide a copy of the Ham Radio.FAQ to any new or
soon-to-be Hams that you know or share with them the URL to this
site:

http://www.mv.com/ipusers/wd1v

Send me an EMAIL <or packet with your Email address> if you want the
FAQ text file sent to you as an attached <120 K> file with the words
"HAM FAQ" on the subject line.

Send me a formatted disk with SASE disk mailer if you want the
FAQ text file sent to you on disk. PC or Mac are fine.

Before you purchase any headset/mike combination, make sure it matches the mic impedance of your transceiver. I purchased a Telex unit and then found a major impedance mismatch with my older Kenwood TS-820.

You, dear sir, make conclusions that you can not support. Maybe you did not read close enough. Obviously, I DID NOT memorize anything. Seeing that I repaired Microwave Systems! That takes a lot more than I needed to know for the ham test. Second of all, if you look at ham as only a service, then you have missed the point! That is all that I have to say.

If you've read Spew's postings for some time, you'd see that you're
right on target here. Spew holds everyone in contempt that doesn't
reflect what he sees in a mirror each morning. He's publically
made bigoted and racist comments about entire groups of people,
like Mexicans, the elderly, homosexuals, and now foreign nationals.

I think it is pretty clear why he rants on and on about 14.313 and
3.875 so much. He's obviously jealous that he can't transmit on those
frequencies and join the KKKnet.

Not entirely. Notice how Spew hasn't progressed past 5WPM. And 13WPM
just means you're able to copy at 10WPM.

I support the 'abolish the code' cry. Let's get rid of the 5WPM and
13WPM exams, and have a single 20WPM exam. That will keep the scum
(like Spew) off...

Do you know that you can remote that rig from a handheld? Also if you happen to have a TH79A it will remote the 733 with single button commands... They both have a hidden mode that allows them to work togather...jim

ke4jcd (Ke4jcd@cris.com) wrote:
: One I'm talking about people that don't have a Hearing or other
: problem. If you have a hearing problem you can get a doctors note and not
: have to take the tone test but a light test instead. So that not a good
: WHY to drop the code for all just becouse you can't hear good. Not ALL
: people have a hearing problems like you. Now you can take a light test
: instead or have the Test droped if you have a hearing problem is
: UNDERSTANDABLE.

Hmmm. This brings back the sugestion of replacing the code requirement
with a requirement that the applicant show proficiency in his choice
of morse code, smoke signals, or jungle drums.

: BUT TO DROP THE CODE TESTING FOR ALL just BECOUSE SOME
: CAN'T HEAR GOOD IS NOT A GOOD REASON!!!!!!!!!!!!!!!

I agree! It should be dropped because there is no reason to keep
it.

: Frist of all, this is a Radio Hobby. CW is a part of that hobby
: just as is SSTV, ATV, PACKET, SAT, ect. I believe that if you want to be
: part of that hobby you should have a understanding of ALL FORM's of that
: hobby. Or what's the point in joining it in the frist place?

In most hobbies, there is no reason to be even vaguely familiar
with forms of the hobby in which you hold have no interest. For
example, someone who likes crawling through caves has no need to
learn about underwater cave diving if he is never going to try it.

For that matter, a person who grows flowers in the yard does not
need to be familiar with vegetable gardening.

It is easy to come up with examples of hobbies where one does not
need to understand every aspect of the hobby in order to enjoy it.
In fact, I can't come up with a single hobby, including ham
radio, where it is necessary.

: CW is not the
: problem. People are! People think this is a RIGHT, but it's not. IT'S A
: HOBBY!! join like stamp's, coin's, ect. CW is a PART of the WHOLE hobby!
: If you don't like something then you don't join. That's very simple. just
: When you went to school did you care for all the subject you took? Should
: we drop the one's you don't like just to make you happy? NO! So there's
: the whole point!

Are you suggesting that becoming educated is a hobby?

Seriously, there are many, many courses that you can take if you
want, but are not required. By your argument, you would have
everyone take everything.

: CW is part of the hobby! See I'm a Amateur Radio person
: and injoy it very much. Just becouse I don't like DXing, should I have it
: removed? NO! It's a part of the hobby!

Are you suggesting that those who don't want the code requirement
are trying to ban code? Far from it. I've never heard of anyone
trying to do that.

: I like VHF and UHF to talk local is
: fine to me. For I'm a NO-CODE TECHNICIAN and that all I want from the
: hobby! Some like DXing well then to be part of that you should know more
: about the hobby! RIGHT? CW is fun if you like it. I know lot's of people
: that all thay do is CW. you will never hear them on VOICE. then some just
: do voice. but it's ALL part of the WHOLE!

While we're at it, since modern radios have integrated circuits,
why not require applicants to show a certain level of proficiency
at designing and building them (at least on an emulator)?

As for myself, I don't have a license. I seriously looked into it
and decided not to bother until such time as I don't have to
learn code (actually relearn, as a boy scout I could send and
receive code by lights and flags).

Eric Johnson

5308. H A A R P test comments?

A M Radio poor reception help...Newbie needs help

I live in the S F Bay Area. I want to listen to some radio garden shows coming out of the L A Area.
The reception is very poor. I have heard you can buy some ....brand ..radios that pick up these far and weak signals.

I have also heard you can put a ..magnet....next to a radio to help the weak signals.

I think they sell these at Good Guys? 40 bucks?

Whats a cheap solution to help me hear these weak stations?

Thanks

reply here please

Typical elitist thinking exibited by the Beepers..."let's keep 'them' out
of 'our' bands." A major reason why the hobby is in trouble today and the
long-term survival of the ham bands is doubtful.

Ham radio has always been part of my life and is in my blood. Learning morse code is part of the brotherhood of ham radio. When you were a kid and wanted to join the club, you had to swallow a live gold fish (or had some other gross thing to do), but if you did not do it you were not in the club. Just because you had to swallow a gold fish did not mean you had to like it or had to do it again. Same with the morse code, if you don't like it don't use it. Just learn it and get on with your life.
We all had to do it, what makes you think your so special. And don't say you are too young or to old to learn something new. My father used to run a class and his youngest student was 5 and his oldest student was 75 and they did it.
Gee, all this complaining over 26 letters a few numbers.

PS: father: "Your gonna eat it and your gonna like it!!!"
kid: "I'll eat it but I won't like it!"

Way to go Steve. Here is a guy who lifted himself out to the cb mud, met
the requirements to get his ham license and is really excited about being
in the hobby and you attempt to knock the wind out of his sails over
semantics of whether it is a hobby or service. I've been a ham for over
30 years and have participated in my share of the service side of the
hobby and I still consider it to be mostly a hobby. Others, like you
evidently, take it more seriously and that's ok, but just because someone
else dosen't mean they think any less of amateur radio.
Lighten up.

5319. Wanted: Kenwood TR-2500 Accessories

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-08 00:00:00 UTC
From: keith.kotch@cycat.com
Message-ID: <857846991.18085@dejanews.com>
Source record: 202959

Looking for accessories that went with Kenwood TR-2500 HT, especially 12v cigarette lighter power supply, desk charger, mobile charger, tone board option. Can be in non-working condition as long as it appears to be repairable. Also need speaker mic or at least a mic element for one. The speaker works and it will key radio but no audio. Another mic did work so it is not radio problem. Need to find element, dynamic not condenser, for it.

Let me know via e-mail if you have things to get rid of or if you know of someone that does. I have a couple of these radios that still work and am using them for APRS and ARES/RACES portable operation but desperately need the alternate power source options.

Thanks and 73s,
Keith, KF4BXT

Correct me if I am wrong, but did you just admit that the code test is a hazing ritual? Your fellow procoders are going to be cross with you. BTW what business does the government have participating in a hazing ritual?

Jerry

No, the CB goodbuddys are too lazy and stupid to learn the code. They
just want to take and take and take. Sort of like the types who don't
want to work and welch off of the government.

I really don't think that this is the correct forum for this, but that is what makes America FREE!

I have lived in Japan for many years, (about seven) and I will tell you that I enjoyed it very very much. As, for Americans being lazy, well I did'nt have to learn that from Japan, this is something that WE know. Ok, ok, cool it down, not everyone is lazy, not by a long shot, but, we really are.
As for Japanese working 12 days a week...not really, just 6. And they do typically work about 14 - 16 hours a day. Most Japanese men are required to commute about 2 - 4 hours one way, and many are required to take a small (relativly) apartment away from home, and only visit with thier familys on Sunday.
Holidays, oh yea, Japanese do take holidays, and sit in traffic for nearly 60% of thier holiday (and thats only 30% more than normal). In the Japanese work enviroment, if you don't produce you are a failure and publicly humiliated!
As for schools, Japanese schools are the toughest in the World! Teachers have ultimate power of the students. Girls are only allowed to have certain hair styles, wear uniforms, and are punished for having the wrong type of comb or hairbush. They are not allowed to wear makeup, they are not allowed to change thier hairstyles to ANYTHING other than pony-tails! They are not allowed to go anywhere after school except home. Teachers ofter follow students and spy on them! Boys have it hardest, not in the above sence, but in the academic sence. If you don't pass a test you are a failure! (period) If a young boy is envolved in sports, or a young girl for that matter, SECOND place in worthless, and you are a failure!
The job you get depends on what school you go to, and I don't mean highschool, I am talking about college. Students go to school 6 days a week (half day on Saturday), and are forced to attend evening school 5 days a week.
Houses in Japan. They are very small by our standards. Japanese do not get the chance to go house hunting. It is impossible for the average couple to BUY a house, at best they hope that thier parents own thier own house and will pass it down. Take an average 4 bedroom, 2.5 bath house and devide it into 4 and you will see the average family apartment (for about $1,300 a month).
As for the price of meat, I went to a butcher one time and saw a nice roast (about 8 - 10 lbs) the price was $1,500! And, no that was not the expensive meat!
Many Americans don't think that Japanese know how to drive, well, that is BS!
Japanese are required to attend a driving school for a minimum of 3 months (and costing about $3,000), and passing a 150 question, essay type test

prior to taking the driving test. Oh, and if your going to drive a motorcycle (which is the absolute best way to drive in Japan) then you are in for a real shock. The licences are broken down into classes depending on displacement size of the bike. For the largest size, 600 cc and above, there is a 95% attrition rate! I challenge any American bike rider to take that test!
Do the Japanese hate Americans? NO! They wish that they had our freedoms! They wish that they could tell people to F*** Off! They can't.
Oh, and as for crime, there really isn't any, except for the foreigners. Japanese don't steal, they are very honest. And they are very friendly. At first they may be intimidated by us, but they really like Americans and can not help what some corrupted polititon says!
Do you really belive everything that you hear on the "news"?, do you really belive everything that your government tells you?, do you believe everything that you see on TV? Neither do they!!!!
Often we are told that the Japanese are doing this and they are doing that! Well, do you know what your Govenment is doing? I mean do you really know?

People who live in glass houses should not throw rocks!

Well, I am sorry for taking up so much space here, but I did want to clear up some points, and to try and have each side know more about each other. That is what it boils down to, we are all human, and we had better get along.

If you have comments about my statements, please send them to me. I stand by what I have learned by traveling the world, and I know that I am a better American for it.

C W Owen

So sez you ... many of us who have been hams for many years
don't agree ...

> When you were a kid and wanted to join the club, you had to
> swallow a live gold fish (or had some other gross thing to do),
> but if you did not do it you were not in the club.

Well getting a license from the federal government to access
publicly-owned spectrum is NOT a kid's club ... nor should the
access requirements extablished by the government mandate
that sort of ridiculous hazing ritual.

> Just because you had to swallow a gold fish did not mean you had to like
it
> or had to do it again. Same with the morse code, if you don't like it
don't
> use it. Just learn it and get on with your life.

See the above paragraph ... we're debating the relevance of government
regulations, NOT the hazing ruitual associated with joining the Elm Street
Third Grader's Treehouse Club.

> We all had to do it, what makes you think your so special.

There's the REAL reason ... the olde fartz "We had to, so so do you!"

And just what the hell is your problem with a person living in a trailer
park? You sound like an egotistical jerk who can only see the material
worth of the world around you. You are missing something important-
Your sanity! Tom
I live in a trailer park and like it.

SB DX @ WW $OPDX.295
Ohio/Penn DX Bulletin No. 295

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 295
BID: $OPDX.295
March 10, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WT4K, K5FUV & DXCC Desk, KK6EK, NL7TB, K8PYD, KF8VW, W0YR, CT1EEB, EA3NY, G4BUE & DX News Sheets, G4ZVJ, I4UFH, JA1IDY, JA4DND, LU2BAR, LX1NO, ON6TT, PA3DMH and RW0MM for the following DX information.

1997 RUSSIAN DX CONTEST. This contest is sponsored by the Union of Radioamateurs of the Russia. Contest activity will be on CW/SSB, 160-10 meters, and it begins 1200z March 15th to 1200z March 16th. Entry classes: A-Single-Op/Multi (CW/SSB/MIX); B-Single-Op/Single Band (MIX only); C-Multi-Op/Multi (MIX); D-SWL Exchange RS(T) and QSO number (Oblast for Russian station). Contacts with Russia count 10 points. Multipliers are the oblast abbreviations + Antarctica, Malyj Vysotskij Island and Franz Josef Land. Final score is QSOs point' x (times) multiplier per band. Separate the logs per band. Awards: Plaques will be awarded to the top world-high scorers. Special certificates to any station working 200 QSOs. Mail logs by April 15th to:
1997 Russian DX Contest, P.O.Box 59, Moscow 105122 Russia.

5R, MALAGASY REPUBLIC. The "DXNS" reports 5R8KH, 5R8DG and 5R8EW are now active on SSTV. Keep a look out on 14230 kHz.

5X, UGANDA (and VK0IR QSLs update). On Sunday March 9th, Peter, ON6TT, left Kampala, Uganda, to pick up his job again, as regional Telecom Manager for the UN. He left his job at the end of November last year to join the VK0IR team to Heard Island. Peter states, "The past 14 weeks have been the most busy, but also the most rewarding and exciting weeks of my life. It was a pleasure sharing it with you, and I hope to hear you on the bands again as 5X1T."
Meanwhile, just before leaving for 5X-land, Peter reports the layout of the QSLs and selection of the pictures for VK0IR, TO0R, TO0R/MM, QSL are finished, and the package was sent to the printer, in Funkamateur, Germany. The printer will have the QSLs ready in 10 days. He will airfreight the 60,000 cards to the QSL manager shortly after that. ADDED

NOTE: There will be an additional bulletin sent to all OPDX InterNet Subscribers (from Bob, KK6EK) about details on ordering the VK0IR video.

7O1A AND DXCC STATUS. In a "DXCC News Release" by Bill Kennamer, K5FUV, the following was reported: "Questions have been asked about the status of the 7O1A operation from Aden, Yemen. ARRL HQ has been in communication with The Ministry of Communications resulting in the following information:
The Ministry of Communications in Sana'a, capital of Yemen, has advised us by both fax and telephone that while it is aware of a document issued by its Aden office, the Ministry of Communications in Sana'a, as the main body responsible for communications, had never issued an official authorization for Amateur Radio.
In accordance with this communication, the 7O1A operation cannot be accepted for DXCC credit."
Meanwhile, Zorro, JH1AJT, has stated in the Japanese DX Magazine of FIVE NINE (Feb. 1997), that he and others will return to 7O-land again some time at the end of April. They will be active on CW, RTTY and 6m in addition to the usual SSB and HF operations.

8P, BARBADOS. Look for David, VE3VET, to be active from here March 25th to April 3rd, as 8P9IJ. Activity will be on all bands with operations SSB with some RTTY. He will also be active in the CQ WPX SSB Contest as a Single-Op/All Band entry. QSL to home call.

9G, GHANA. Andy, G4ZVJ, plans to sign 9G5VJ from Accra, from March 7-17th. This includes activity in the RSGB Commonwealth Contest on March 8-9th (British Commonwealth QSOs only). Activity will be CW ONLY on all HF bands. Suggested frequencies are: 1827, 3503, 7003, 10103, 14027, 18077, 24897, and 28027 kHz +/-. QSL via G4ZVJ via the bureau or direct to: Andy Chadwick, 5 Thorpe Chase, Ripon, North Yorkshire, HG4 1UA, U.K.

CARIBBEAN DXPEDITION (Vacation). JA4DND and JA5AUC will be active as VP2END and VP2EUC from Anguilla, March 16-21st. From VP2E-land, they will travel to St. Martin and be active as FS/JA4DND and FS/JA5AUC from March 21-26th. Their schedule may be changed without announcement. They will be active on 160-10 meters CW/SSB. They plan to bring a TS-690, IC-735, FL-2100Z, CV48 (vertical for 75m/40m), APA80 (multiband vertical) and a FD4 (dipole). QSL to home calls.

HEY! WHERE IS MY DXCC YEARBOOK? It has been reported to OPDX that the yearbook is still at the printers. NO date was mentioned on the distribution.

IZ9, LAMPEDUSA ISLAND. The members of MCC (I4UFH, IV3TAN, I4JMY, IK2SGC, IT9EQO and IT9GSF) will activate this African Italian island (AF-019, CQ Zone 33) with the semi-rare callsign/prefix IZ9Z during the WPX SSB Contest. QSLs will be handled from IT9EQO direct/buro.

J5, GUINEA-BISSAU. Antonio, LX2DW, will be active as J52DW, from March 24-28th. He has stated explicitly that he will not participate in the

upcoming CQWW WPX SSB Contest (unfortunatly). He will be using a log periodic for 20-10 meters, and there might be a possibility for some 80 and 40 meters operations. He will operate SSB only. QSL via LX2DW, bureau or direct.

J7, DOMINICA. Be looking for Larry/AA6MV and Marti/N6ULI to be active this week from March 11-19th. Activity will be mainly on CW, but there will be some SSB. Operations will be on 40-10 meters. Their callsigns will be issued upon their arrival. QSL both via AA6MV.

KG4, GUANTANAMO BAY, CUBA. From March 14-21st, operators Bill, WT4K/KG4GC; Rusty, AE4WH/KG4AU; and Wayne, KG4WD, will be active in the BARTG Spring RTTY Contest as a Multi-Op/All band entry. They will use the callsign KG4AU in the contest. QSL to WT4K, Bill Gallier, 4094 Sandy Run Drive E, Middleburg, FL 32068.

OOOPPPSSS DEPARTMENT. Last week under "JW, SVALBARD" we mentioned OZ8RO's name as "Ray", this is wrong. It should have been Rag.

OK8, CZECH REPUBLIC. Norby, LX1NO, and others (OK1RR, OK1MD and LX2KW) are planning to be active in the CQWW WPX SSB Contest as OK8AUY as a Multi/Single effort. QSL to LX1NO (do NOT use the 96 call-book address!).

POTUGUESE IOTA DXPEDITION. The Northern Portugal DX Group (NPDXG) and The Portuguese DX Group (GPDX), will be active in a joint DXpedition from Insua Island (IOTA EU-150), from the July 24-28th. Activity will include a Multi/Single entry in the 1997 IOTA Contest. The group requested the callsign CQ2I for the contest, but outside the contest the operators will use "/" portable callsigns. They will be active on the usual IOTA stand-by frequencies. Operators will be CT1AHU, CT1BQH, CT1CJJ, CT1DVV, CT1EEB, CT1EEN, CT1ENQ, CT1ESV, CT1FMX and G3TMA.

QSL INFO AND NEWS.....
STATUS OF QSLS FOR 4U1UN. QSL Manager, Jerry, WB8LFO, reports the following: "In order to respond to the comment that has appeared concerning the status of 4U1UN QSLing, we thought it could be useful to furnish some info on this question. Currently, we have about 300 direct response cards on hand, and between 600 and 700 cards to be answered through the bureau. We refer to 4U1UN and variant call signs such as 4U/special anniversary series, e.g. 4U49UN etc. In addition, we are now processing 4U51UN cards and have about 600 cards to be replied. If you have not received a reply to your QSL request, please check to see where the cards were sent to. In the past there have been several routings for 4U1UN cards. Cards should now be sent to WB8LFO via the bureau or direct to: WB8LFO, Jerry Kurucz, 5338 Edgewater Drive, Lorain, Ohio. 44053. If you wish to query us regarding an overdue card please E-Mail us at: wb8lfo@centuryinter.net"

C9RRJ/C91J QSL CARDS. The original QSL route was to W8GIO, but it is now reported that QSLs are being forward to N5FTR. The report states W8GIO has health problems, and even though the operation is over, there is a large amount of cards to be answered yet. Anyone still needing

QSLs from these stations should submit a request for card(s) to N5FTR.

9K2ZZ BUREAU CARDS. Leo, K8PYD, of the 8th Area District, reports bureau cards for 9K2ZZ going to QSL Manager W8CNL are being pitched. W8CNL told Leo that he only answers cards that he receives direct and he no longer answers bureau cards at the request of the former operator of 9K2ZZ. Although the operation is now completed, there is still a large amount of cards still arriving at the bureau. If anyone really wants a card it is recommended they QSL direct to the manager W8CNL, with SASE. He has a limited stock of cards on hand. Leo states, "Eventhough we have been authorized at the bureau to 'pitch' the cards, we have taken the liberty to return some cards to the original sender, via the bureau, noted as 'unclaimed'."

D25L Cards. Alex, PA3DMH, states the D25L QSLs have arrived from the printer, and they will be in the mail as early as next week. Requests received after the 1st week of February will be processed when the other backlog is cleared. Bureau requests will start hitting the bureau in early April.

QSL MANAGER CHANGE. It has been reported that K7EHI is no longer manager of T30A. The new manager is Steven, KU9C. OPDX was told that you can ask Steven by E-mail if your contact is in the log before sending the envelope with the QSL direct. His E-mail address is: ku9c@ix.netcom.com

SSTV (DX) ACTIVITY. THe "DXNS" report the following active on Slow-Scan TV. Look for these station to be active on 14230 kHz:
5R, MALAGASY REPUBLIC. 5R8KH, 5R8DG and 5R8EW.
CN, MOROCCO. CN8LI and CN8NK.
D6, COMOROS. Jean-Pierre, D68ZJ. QSL via CBA.
FR, REUNION. FR5AB and FR5SD.

T8, SEBORGA. Eddie, EA3NY, states he will be here during the CQWW WPX SSB Contest. He will be a Single-Op/Multi Band low power entry. He will use the callsign T0NY (Tango-Zero-November-Yankee). Seborga is located in Northwestern Italy close to France, Monaco and Italy.

USI ALERT (new NC island). Mark your calendars for the Portsmouth Island QRP DXpedition which will take place April 4-6th, starting around 2100z, by the Knight Lites on their Spring Hamventure. The Knight Lites are a group of amateurs who specialize in QRP operations. They will sign WQ4RP. QSL via K4HQ. ADDED NOTE: When qualified (ie- 25 contacts with 2 countries minimum) for USI, the island will be assigned NC-009S. Portsmouth also counts as NA-67. For more information, please visit their Portsmouth Island website at: http://www.ipass.net/~aa4xx/ocra1.htm

ZL9, AUCKLAND ISLAND. Mike, HA/W0YR, currently in Budapest, informed OPDX he had a QSO on March 3rd, at 0639z with Ed, ZL4/K8VIR, and he reports the following: "Ed, K8VIR, will leave the South Island of New Zealand on March 30th for Auckland Island (ZL9) with a group of scientists for an indefinate stay on ZL9. He is the only amateur of the group, and his operation is a

sideline. It is a scientific trip. The expected arrival date at ZL9 is April 2nd. They may have to lay off the island behind a sheltering island if the weather is bad. The call will be ZL9/K8VIR. He said he would work mostly SSB (14.260 start freq) and some CW. QSL to: ZL9/K8VIR, P.O. Box 9, Teanau, New Zealand (No postal code was given.)."

5335. Gonset GSB-201 HF Amp

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-09 00:00:00 UTC
From: Dan K Nelson <dknelson@pacbell.net>
Message-ID: <33236D9E.75F1@pacbell.net>
Source record: 202776

I recently aquired a Gonset GSB-201 amp in excellent condition, however there is no documentation. This amp runs four 811A's but that's about all I know about it. Would anybody have a User Manual and/or schematic (a copy is fine also) for this item? I will be glad to pay for your time and trouble if you can help.

Thanks,

<<< DAN >>>

Mel,

I dont have one, but you might pass a note along to Jim Moore WU3V (jim@usl.edu) and see if he's heard of anything. Jim runs the Packet Cluster down in Abbeville, La. and there's usually messages like that floating along there. Tell him I sent ya, and maybe he'll pass along access to the Net side of his gateway and letcha read the messages on his cluster.

Good luck

I learned CW and got my EXTRA. have always used it, always will ... its
called diversity KF4U

5341. FTV = WEFAX-FAX-SSTV-RTTY with SoundBlaster

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-09 00:00:00 UTC
From: "Brian E. Cauchi" <gcauchi@keyworld.net>
Message-ID: <01bc2cd3$3ce08540$0101a8c0@gcauchi.keyworld.net>
Source record: 202782
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc, rec.radio.amateur.space

Hello... Brian here!

If you have a RADIO and a SOUND BLASTER (or compatible card) you already have all the hardware necessary to:

RECEIVE - WEFAX, FAX, SSTV, COLOUR SSTV and RTTY
TRANSMIT - FAX, SSTV and COLOUR SSTV

*** Put the power of your 80386, 80486 or Pentium processor to real use ***

The external "decoder" units that are used by conventional users are modelled inside this software. This makes it easy to get started, inexpensive and rids you of the inevitable tangle of wires and boxes of decoders.

Absolutely no external hardware, other than a simple audio lead, is required by FTV. The current version decodes:

WEFAX (from weather satellites, e.g. 137-138 MHz)
HF-FAX (from terrestrial stations)
SSTV (from radio amateurs, e.g. 14.230 MHz)
RTTY (press, naval, weather etc)

Here is a run down of the more interesting features:

(1) It keeps the demodulated signal in memory, so that the signal can be analysed again at a different keying rate or polarity! Garbage can be resampled on the fly, which means that minutes of received signals decoded at the wrong baud rate or keying polarity are recovered, on the fly, while still receiving.

(2) The incoming signal is analysed automatically - standard modes, line rates, baud rates and keying polarity are automatically determined following analysis.

(3) Tuning oscilloscope available at all times, without loss of copy.

(4) Program works in real time.

*** What are you waiting for? Try it now! ***

Take a look at my web site for futher details, from where you can download an evaluation copy, at: http://www.geocities.com/SiliconValley/2504

Registration promotes the further development of this software and entitles the user to future upgrades paying only for delivery expenses, if any.
Current release is 0.98f

Finally, just in case some of you have trouble accessing my web site, here is my postal address (if you want a reply, send a self-addressed label and IRC's to cover expenses):

All you can do is talk about it. Nothing you can do.
The fact is that since radio shack has sold 2m and 440 gear,
this sort of activity has increased. 144.300 +- has been used
by truckers and drug dealers in NYC for some 5 years.
The truckers go to Hunts Point market. I don't think anyone
will go up, knock on the window of a peterbuilt and ask to see
"rooster's" license.
Just more senseless drivel over nothing.
It truly is over.
I will still talk to anyone, license or not
Alot of HF QRM is done by people who never give thier call.
What good is a call? we may as well go to "handles", since
the first defense of some elites is "you sound like a bunch of CBers"
What the hell does it mean to take a test when Q&A's are published
by the ARRL to boost thier $$$ profits. The whole thing is funny!
Too bad though, 15 years ago, we had a chance to save the service.
Now amateur radio is only a auction away from its demise...
Good luck with the old buzzards at the radio club, they will tell you
that back in the old days, we never had bootleggers.... yea, right!

Dear NK2U,

You illustrate the whole problem by your snipes about Army, Navy, etc. The fact is most people think of the military as somewhat set in thier ways. If they dropped CW, how can amateurs argue that our "hobby" is progressive, vital and dynamic?

Big deal, you're an extra. You either like CW or want to be a lifer in the ARRL. Instead of telling others to join the Army/Navy, why not try looking in the mirror and asking "why don't I use CW for my e-mail instead of juno.com.

You need to get into the 90's where CW is NOT state of the art!
It should not be a requirement henceforth!

5345. CW should die, not the "hobby" was a "service"

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-09 00:00:00 UTC
From: Woody <rafman@kerrlake.com>
Message-ID: <33236044.339E@kerrlake.com>
Source record: 202786
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.ham-radio

After reading all this drivel by NK2U and countless others. Ham radio operators show to the world, they wish NOT to allow an outdated mode to die. They would rather be rigid to the point of breaking the hobby off instead of being dynamic or say flexible. How stupid!

I don't care if you want to operate CW. It should not be required any longer. International requirements are vanishing, so will this 'HOBBY' if this rigidness keeps up. This is my opinion.

I wish the ARRL had just left electronics theory in the test so most of you appliance operators would be in this hobby! Electronic theory was watered down when the ARRL started generating question pools.
I would love to see most, NOT all, you extras pass a technical test worth something more than outdated 20 wpm CW.

NK2U would have to join the Army, to learn electronic theory not CW!

Amateur Radio: one auction or so away from its demise...

Kill the code or kill the hobby?

The time has come...

Millennia (yup millennium has two n's) don't occur at a point in time
or even in a single year, they exist over 1000 year periods. The
present millennium ends at the close of the year 2000, and the
following one starts immediately thereafter.

Everyone should be free to celebrate (and to misspell) whatever they
choose, and without the celebration police bothering them.

Regards,

Bruce -

The attitude you convey here is a root cause of many Ugly
American feelings. You are a part of the problem - not a part
of the solution.
We, as Americans, have no "obligation" to proffer out belief
and value systems to anyone. Most peoples of other nations
view such efforts as self-righteous American ignorance.

In addition the technical support that can be found on the Log Windows
reflector is better and more timely than it was when you had to call up
AEA for support. Log windows is a great program and dealing directly
with the author has made it even better.

A happy user.

Ham radio is a service that is disguised as a hobby. We all have fun,
buy our own equipment, provide our own training and examination system.
And most of us provide service to the public when we are called on to do so.
Just think what it would cost if the government tried to provide the
same service with hundreds of thousands of trained operators with expensive
mil. spec. equipment scattered all over the U.S..

Source record: 202836

My Dad was a "ham" for 50 years, using WWII surplus equipment for the most part. When he died recently, we found his collection of about 800-1000 QSL cards. When we were cleaning out his shack and giving away the equipment, a fellow told us not to throw away the QSL cards. So I kept them. Is there really a market for something like this, or are there hams that enjoy going through the old cards? I kept them, but have no idea what to do with them. Any ideas or anyone interested? Send an e-mail reply to dhackle@ix.netcom.com as I am not a newsgroup user (yet) and may never find my way back here! Thanks

<snip>

An excellent post from someone who's "been there, done that." I agree 100%. The new hires at the company I work for don't seem to have any work ethic. They think a business only exists to provide them with a source of income, and they shouldn't have to do anything to get it.

However, as you pointed out, Japan is not without its problems. A child born female is automatically born with a handicap. The pressure to succeed is so great that there is an epidemic of teenage suicide. Japan, for thousands of years, has been a country that has held failure as something to be publicly humiliated about and the subject of shame. It's the ancient code of the Samurai that has been carried over from the military to the economy. It has made them powerful, but IMO, it has not made them great.

I spent a fortnight in HK last December.

I found a few shops selling amateur gear. The prices were generally
higher than in the US. Apparently most of the shops expect you to
dicker on the price and start out high, but the IC-2000H I looked
at listed at 400,000 HKD - about $520 US. I said "that sells for
about 225,000 HKD in Los Angeles" and he couldn't even come close,
much less offer an attractive deal.

Yeah Bruce - Doug is right. We have no business attempting to put pressure on African and Arab/Indian nations that practice female circumcision (genital mutilation), on China and other nations for human rights violations, Iraq for genocide, Serbia for "ethnic cleansing", the Khmer Rouge in Cambodia (yup, the murderers of 2 million Cambodians in the late 70s are still around), North Korea, Burma (or are they calling themselves Myanmar again?), Cuba, et al. We should have never put pressure on South Africa to abolish apartheid. And look - we caused the old Soviet Union to break up! Shame on us.

You see Bruce, Doug believes that the folks in other nations really aren't suffering, and if they are, who cares - it is none of our business; our business ends at our border. (Wouldn't Doug be shocked if he were up in the space shuttle and discovered that borders between nations really don't exist?)

So shame on you Bruce for wanting to help end pain and suffering around the world; just wear earplugs like Doug does so you won't hear the pleading and crying.

Jeff KH2PZ

ObRadio: I need the little roller that runs over an inductor in an antenna tuner; found a neat coil wound on a bakelite form with two short steel rods protruding from each end - this would make a superb roller inductor. Windings are spaced 4mm apart; the roller should be about 2mm wide.

Yup. I taught math for a small private college here a couple years
ago and was told by the department chairman, "If you fail too many
students, don't plan on being rehired. We cannot afford to turn
students away and lose their tuition money."

Their student affairs office was actually titled "Consumer Affairs."

Needless to say, I only lasted one semester there (I awarded F-grades
to about 30% of my students).

To which Mike replied:

Never said I was going to. Merely stated that I was surprised that
local homosexual-rights groups didn't. In fact, had you bothered to
read my post (reading doesn't seem to be one of your strong points,
not that I am surprised, since you'd have to pick your knuckles up off
the ground in order to turn the pages of a book and all...) I stated
that >I< would never do such a thing, because people have done the
same thing to me.

Naturally, a much more effective method of bringing pressure to bear
would be for homosexual-rights groups to openly boycott the customers
(advertisers) of your radio station, and let the advertisers know why
they are being boycotted. Economic impact is much more effective than
a mere letter-writing campaign. If I really had the inclination to
harass you, Spew, that's how I would do it, but as I've said before,
I'd much rather spend my time with my kids than you, Keikikane.

5374. IMPORTANT aade filter design UNINSTALL

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-09 00:00:00 UTC
From: Neil Heckt <neil@aade.com>
Message-ID: <33230374.3857@aade.com>
Source record: 202850
Cross-posted to: sci.electronics,sci.electronics.basics,sci.electronics.cad,sci.electronics.design,sci.electronics.misc,rec.radio.amateur.antenna,rec.radio.amateur.misc

If you downloaded AADE FILTER DESIGN from my web site and have
installed it please read this.

The removal instructions list some files installed in the
WINDOWS and WINDOWS/SYSTEM directories

DO NOT DELETE ANY OF THESE FILES when removing aade filter design.

Most of them were not installed by aade filter design but are part
of WINDOWS 95 and probably WINDOWS 3.1
Deleting them could cripple WINDOWS.

To remove AADE FILTER DESIGN simply delete the directory where
you installed it and the subdirectories contained.

ie: C:\filter

Microsoft does not provide information about what files need to be
distributed with an application, instead Visual Basic creates
distribution
disks without explaination.
Microsoft makes good software but their documentation stinks
and their technical support is virtually none existant. You have a
better chance of directly communicating with GOD than
Microsoft technical support.

Hope no one had any problems with this (other than the one person
who brought it to my attention).

Neil

I believe a blank screen on TX means the radio does not have a DTMF module.

I am not sure how this works but you need a radio data file already
configured to TX/RX from 144-148. Load that in the radio and your
fine. It seems like there is a flag in the data files which allows
the radio to TX/RX on the amateur frequencies. I got my file which
allowed TX/RX in 144-148 MHz from Bendix King when they were in Kansas
(I believe). I had to send them a photocopy of my license. This was
over 15 years ago.

There is no upgrade from 14 ch to 210 channels. You have to purchase
another radio.

We migrated to 800 MHz trunked radio system and we just sold our
Bendix King radios so I am typing from memory. I could be wrong about
something.

I can't remember which terminal of the battery is '+' and '-'. I would
purchase a battery charger designed for the battery.

> independently go?

Roland ... I would submit that there's a great difference between
"thinking independently" and "stubbornly ignoring the facts of the
world around one's self" ... the latter is what the pro-coders are
doing ... it's not desirable independent thinking, but rather the
worst of narrowminded resistance to the reality of ongoing change
in the world around one's self.

It is, however the ARRL/olde farte/pro-code way .... to assert that
it's "independent thinking" to claim "what the rest of the world does
(e.g. abandon the use of Morse code) is irrelevant to ham radio, where
it's imperative that we maintain Morse code." That is NOT independent
thinking ... that's stubbornly ignoring the facts of the world around one's
self. Such thinking is to be discouraged and reviled, not celebrated.

Holy hell, Tom, I'm sincerely glad that you're one of the sane,
calm, and well-mannered people that live in trailer parks. Being
a smart person, you -do- realize that you're flirting with being
in the minority, don't you? I mean, the fact that people call
others "trailer park trash" or similar names comes -exactly- from
the type of exchange noted above. I don't know how to break it to
ya, but there -are- a whole bunch of foul-mouthed, ignorant, lazy
people that live in trailer parks.

Hell, I don't know, maybe yours is an "upscale" trailer park that
doesn't tolerate people engaging in loud drunken domestic battles
every night after dark, but again, that would be the exception to the
rule. The issue here has nohing to do with "material worth", but has
everything to do with the fact that you find a whole lot of rude and
crude people living in trailer parks. Sometimes, reality stinks.

I work with a guy who lives in a trailer park, and -he- makes
fun of "trailer trash" on occasion! He's better than that, he knows
it (as it sounds like you do), and he's looking to buy a piece of
land and get the hell out of there. Sorry, I don't mean to be
critical or gang-up on you over this, but I know -exactly- what
Michael meant by his remark above. Don't take it so personal.

--
Tom "Mongo" Pendergast
Pittsburgh, PA
(BTW, we live in an old <50K "money hole" house in an old community

full of aging row houses and a whole bunch of boarded-up places
that have -no- future except as an empty lot. I take just as much
pride in keeping my place clean and working well as I'm sure you
do with your trailer. Every once in awhile when talking about my
neighborhood, I'll use the expression "one step above a trailer park"
and poke a little fun at myself. Don't be afraid to try it sometime.)

Unsolicited e-mail will result in complaints to postmasters, billing
for my time to read it, invoices, and legal action if necessary.
I know how to read headers and use whois, traceroute, lawyers
and credit bureaus. Consider yourself warned.

5382. RE: Alinco vs. Icom

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-09 00:00:00 UTC
From: kf4hyb@totally_useless.com
Message-ID: <5fv7kc$qt5@camel1.mindspring.com>
Source record: 202858

Well..... as far as operating features, the Alico has better noise filtering than the Icom- although the Icoms is sufficient.
BUT ... The Icom has 2 meters, and the Alinco doesn't. Now 2 meter sideband is Quite active where I live... even with some long distance ducting AND propagation. I suppose you already have a 2 meter mobile, but what a great way to save space in the mobile...no more multiple radios.
If you are strictly looking for a big power 6 meter rig...go for the Alinco and save a couple hundred. But if you don't already have a 2 meter multimode rig , I would advise going for the Icom. A 2 meter multimode would cost you almost what the 706 goes for anyway.
Any further advice wouldn't mean anything as it would strictly depend on operator preference in radio features. Hope this helps...kf4hyb.

I've just purchased a Datong ASP Audio Speech Processor at the Picketts Lock rally bring and buy stall. The mic sockets on it are 7 pin, whereas my rig (Trio 9130) has a 6 pin mic plug and socket.

Could anyone tell me the pin out of a 7 pin mic socket? I assume it is standard.

I have,like many,been reading the mail about the code controversy and think that most miss the point. Why can we not recognise that some will like to operate CW and permit the continued exsistence of the CW portion of the various bands. We also could provide for non code licences in all bands..Those that really wish to operate CW would not be affected and could continue with CW and their buggy whips....Those that stump for CW and never operate CW do not deserve a vote anyway...The people who would deny others access to the hobby with "I did it,so can you" are beyond comprehension. I nearly died of pneumonia 66 years ago...Should I insist that current 2 year olds not be given current medical treatment because I had to do it? It seems that that there could be room for all in the amateur radio service with just a little tolerance for the views of others. 73 Don N5XO

(*****

The following is a QST

The ARRL and Radio Amateurs Canada get tough with the Little Leo satellite industry. Both societies indicate that there is no room for compromise on an industry band sharing idea. The details on Newsline report number 1021 coming your way right now!

(*****

LITTLE LEO VS. THE ARRL

The battle between ham radio and the Little Low Earth Orbiting Satellite Industry has escalated. This with the American Radio Relay League having drawn a proverbial line in the sand and daring the Little LEO industry to cross it.

Setting the tone is one high ranking ARRL official well known to Newsline listeners. Speaking at the Leagues recent Great Lakes Convention in Cincinnati Ohio, First Vice President Steve Mendelsohn, W2ML, was very blunt in saying that this is literally a fight for the survival of ham radio as we know it today:

"This is the fight, we are fighting for 2 meters, 220, and 450. And its a vary real fight. There is no presentation I can make. There is no comment that I can make to you that is more important than an understanding that the league board, the leagues staff and all the senior officials out in the field know that this is not a joke, This isn't a drill. This is the real thing. The fight for VHF and low UHF is on. And is on right now with the Little LEO crowd." Mendelsohn

From what Vice President Mendelsohn and other ARRL spokespersons are saying, the League appears to have taken the position that there is not even any room for discussion of possible band sharing with the Little LEO satellite industry. The society seems to be saying that its either them or us who will have the 2 meter, 1 and 1/4 and 70 centimeter bands and its definitely not going to be the Little LEO's.

(Via Amateur News Weekly and Newsline)

(*****

RADIO AMATEURS CANADA VS. LITTLE LEO

And the ARRL is not the only ham radio national society taking a tough line against band sharing with the Little LEO satellite industry. Radio Amateurs of Canada is warning hams north of the border not to be taken in by what it believes might be a divide and conquer strategy by that industry.

On February 22, Radio Amateurs Canada issued an advisory to all clubs saying that representatives of large telecom corporations were approaching Amateur Radio clubs. This, to explain how it would be feasible for the Little LEO and hams to share spectrum in the 146, 220 and 440 MHZ bands.

But the Canadian ham club that's at the focus of the flap says RAC is wrong. The Kitchener- Waterloo Amateur Radio Club says that it extended the invitation to a representative of ORBCOMM Canada to speak at an April 7 meeting, not the other way around. The club says it wants to learn more about the way current LEO satellites are already sharing public safety and commercial frequencies. Using its Web page the club defends its invitation to ORBCOMM as an open-minded effort to get all the facts.

But in the advisory signed by RAC President Farrell Hopwood, VE7RD, the society leaves no room for compromise with the Kitchner-Waterloo club or anyone else. It says that a club's broad-minded reception of industry speakers could be turned against hams. RAC says that after talking to ham radio groups the Little LEO industry could then approach the government claiming it consulted with hams across the country who greeted them warmly and did not disagree with their ideas.

Radio Amateurs Canada adds that it will do everything it can to dissuade government and industry from forcing hams to share bands. It calls the Little LEO band sharing idea an ill- conceived program that is loaded with problems for amateurs and the public.

(Via Radio Amateurs Canada)

(*****

ARKANSAS TORNADOES

Severe thunderstorms spread heavy rain and tornadoes Arkansas and surrounding states on Saturday, March 1st destroying homes and causing flooding. Radio operators were on the scene ready to provide assistance. We have this report:

Skywarn nets across the southeastern United States have been on alert since the National Weather Service issued its first Severe Weather Advisory at approximately 4:30 Friday on February the 28th.

Tommy Thompson, KD4TJO, is the Assistant Skywarn Coordinator for Mid-South Skywarn. He tells Newsline that his Skywarn Coordinator Suresh Kagoo, N9GSA received a call that day from the local weather service office requesting a Skywarn Net as soon as possible. N9GSA left work and was joined at the weather service by David Pace, KU4AS. They immediately began receiving reports from some of more southern counties in the severe weather warning zone.

Two towns in Pototoc County Mississippi were hit by tornadoes and the first information of this was passed to the Memphis National Weather Service office by hams in the area. Damage reports were taken and shortly after the second shift of Skywarn trained hams arrived at the office.

At about 2:30 am Saturday morning, N9GSA received another call requesting hams be sent to the National Weather Service office again. He phoned Thompson and both responded. Arriving at the weather service at about 3 am, they found activity again popping up in Northwest Mississippi and Southeastern portions of West Tennessee. Numerous reports of hail and damaging winds were reported to the NWS office by radio amateurs.

At approximately 5:50 am the first reports were heard over the VolNet system of a tornado touchdown in the town of Ramer in Southeastern western Tennessee. Several mobile homes and one brick home were destroyed in this storm. Luckily no loss of life occurred, especially when the storm struck just as people were about to start their day and I'm sure many were still asleep. This section of the Skywarn Net was secured at 7:30 am.

Ironically, the NWS office was conducting an all day Severe Weather Training Seminar and most of the Skywarn volunteers were in attendance. Many were pressed into service and by 2:30 in the afternoon, they were getting reports of tornado activity in and around the Little Rock, Arkansas. The same group of storms tracked across Arkansas for about 250 miles and then hit the town of Hickory Hill.

The NWS received the first information about this tornado from Bill Swan, WB5RCS in Forrest City, Arkansas. Swan is the communications officer for the local sheriff's office which had a request from Cross County for emergency assistance for rescues and ambulances. Other reports came in from David Moore, N5MOT, the district coordinator in the Jonesboro, Arkansas area as the storms passed close to him on their severe weather trek to the northeast.

Two more shifts of Skywarn ham radio volunteers carried the net through the night until 3 am when all the watches and warnings expired. They were busy taking storm damage reports and flash flood reports. These volunteer hams included KE4GYR, AB4HN, N4SSE and KA4BLL.

Thompson says the weekend will be forever etched in the Skywarn volunteers minds as one of the worst severe weather outbreaks in the area in recent history.

And the story is not over yet. As we go to air, hams across the southeast are assisting in clean-up efforts while those to the North in Ohio are on flood watch.

Arkansas was not the only area hit by this bad weather. Just over 7 inches of rain fell in the 24 hours in Louisville, Kentucky. That's a record for the date. Some neighborhoods were flooded with six feet of water. Flash flooding also caused evacuations in southwestern West Virginia and part of southern Ohio.

(Via Mid-South Skywarn, others)

(*****

N.J. CELL TRACKER

An emergency services cellular telephone tracking system that will let emergency dispatchers know the whereabouts of cellular phone callers has begun a three month trial run in New Jersey. The TruePosition system, activated along a 50 mile stretch of the New Jersey Turnpike and Interstate 95, should track the caller within seconds.

TruePosition uses a computerized electronic map to allow a dispatch operator to pinpoint a cellular emergency call within 410 feet of the location. Previously, those calls could be tracked only within a 5 to 10 square mile circle.

About 42 million wireless telephone users place more than 18 million emergency calls in the country annually. About 20 percent of the 10,000 calls daily to New Jersey's 911 system are placed from cellular phones.

(Via TruePosition press release)

(*****

CB ARREST

A citizen's band radio operator lands in jail over what police say are repeated interference complaints. While radio interference falls under the

jurisdiction of the federal government this case did NOT involve the FCC. Instead, local police nabbed the suspect, not once, but twice. It's happening in a suburb of Birmingham, Alabama.

A knock on the door in the middle of the night, moments later, police officers in Fultondale, Alabama, take CB operator Donnie Smith into custody. It's the second time in about three weeks for Smith to be arrested, all because of what police chief Bill Finn says is repeated interference from Smith's CB transmissions.

Finn says Smith's signals have interfered with the telephones and television sets of several neighborhood residents. According to the Chief, Smith has been the target of at least 20 complaints that started fourteen months ago. Police say Smith used a 500 watt amplifier, the use of which is illegal under FCC rules.

Officers talked with Smith, but Finn says the transmissions continued and sometimes contained obscenity. With no end in sight, police contacted the FCC for assistance, but got none. The Chief says he then asked for help from Congressmen and Senators who called Commission officials in Washington. But the transmissions and complaints continued. In the Chief's words, "Washington is not enforcing anything."

So local police took matters into their own hands, arresting Smith during the early morning hours February 28th. Finn says Smith faces two harassing communications.

Neighbors recorded some of Smith's transmissions on tape, including one the day of the Super Bowl. In that tape, the Chief says Smith is heard saying he's going to "fry" the television.

Smith was released on property bond after his first arrest and on his own recognizance the second time. His case next goes before a municipal judge.

Donnie Smith's arrest is believed to be only the second time on record that local law officers acted in lieu of federal authorities on a communications interference complaint. The case raises questions of whether local officials are overstepping into federal jurisdiction.

In December of 1995, police in Moraine, Ohio, arrested a CB operator who had repeatedly been accused of interfering with a neighbor's television set. He was charged with a felony count of interfering with public service, but county prosecutors later dropped the charge.

This latest case is important for another reason, too. It shows something amateurs complain about constantly. That's inattention to enforcement matters by the FCC. Now law enforcement agencies seem to be experiencing the same frustration as hams in trying to get Commission assistance.

(Via Newsline)

(*****

FCC STRENGTHENS LOCAL GOVERNMENT TIES

Meantime, the FCC may be getting ready to hand over some of its regulatory authority to local governments. Chairman Reed Hundt has announced the formation of a new Local and State Government Advisory Committee.

Their responsibility is to advise the commission on matters of their concern to their political constituencies. This includes public right of way, removal of barriers to entry into various aspects of communications and oversight of the site selection of any type of radio transmitting facility.

The committee will be made up of elected officials of state and local governments or their representatives and one member from the FCC. There will be fifteen members in all. It is unknown if any representative of the nations Amateur Radio community will get to serve on it.

(Via Radio World)

(*****

SPECTRUM AUCTION

And the FCC says that it has closed its books on its auction of what it calls the DE and F blocks of personal communications spectrum that took place in January. The agency says that this action raised in excess of two and a half billion dollars to help offset the national debt.

The Commission is scheduled to begin auctioning off portions of the 2.3 gigahertz band on April 15th. This will be for wireless communications service use as well.

(Via FCC press release)

(*****

ADDITIONAL VANITY CALLS

The FCC is making available six amateur station call signs to vanity applicants who file applications on or after March 27th. The call signs are W0AW, W3RO, W4CC, W4ART, W7MT and K7JW. All are available because they were surrendered by or taken back from licensees who were not eligible to hold them.

(Via FCC, ARRL)

(*****

NEW FCC HAM PHONE

Also, the FCC has designated a new, toll-free number for Amateur Radio license inquiries. This includes inquiries about vanity and new call signs. The number is (888) 225-5322.

This number will actually connect you to the FCC National Call Center, handled by the FCC's Consumer Information Bureau. From there, you will be

steered to the information that you need.

Again, that number is (888) 225-5322 and it is toll free.

(Via FCC release, ARRL)

(*****

N3JT BACK IN LAW PRACTICE

Former FCC staff member Jim Talens, N3JT, has joined the law firm of Steptoe & Johnson, specializing in telecommunications law. Talens recently retired from the FCC after a 22 year career. Just prior to leaving the Commission, N3JT he served as senior attorney in the Satellite and Radiocommunication Division.

(Via ARRL)

RS-16 IN ORBIT

The Russians have launched their long awaited Radiosport 16 ham satellite. According to postings on the AMSAT bulletin board, the new Russian hamsat was launched as part of a Zeya satellite package and has an average orbital altitude of 276 miles, this says AMSAT, produces a footprint some 2000 miles in diameter on Earth.

One of the first people to hear the new ham satellite was Jim White, WD0E. He says he spotted its signal at 16:14 UTC on Tuesday, March 4th. White reports hearing strong signals from the RS-16 CW beacon on 29.406 MHZ. Others in the U.S. and Europe have reported strong signals on 10 meters. As we go to air, the transponders on RS-16 have not yet been activated for general use.

SLUGGISH CONSUMER ELECTRONIC SALES

America's desire for new electronic products seems to be slacking off. A consumer electronics trade group says sales of products in 1996 posted the weakest gain in at least four years.

While demand for personal computers is still strong, the Consumer Electronics Manufacturers Association says overall factory sales of electronics rose only four percent in 1996. The total was a meager 65.7 billion dollars.

But results are better than feared, at least on the computer side where sales were up by 15 billion dollars. In fact, one analyst for a brokerage firm calls the growth in PC's as being just short of spectacular."

On the down side competition and a weak market drove down prices and revenues in the sale of TV's, VCR's and home stereo. Ham equipment sales

are also known to be down, but were not included in the industry survey.

SOUTHEASTERN VHF CONFERENCE

Some upcoming events to report. The 1997 Southeastern VHF Society Conference will be held April 4th to the 5th at the Atlanta Marriott Northwest in Windy Hill, Georgia. The Conference Technical Program will include presentations by such well known VHF experts as KA2DRH, WA4KXY and others. Antenna gain measurements for 2 meters through 10 GHz and noise figure testing will also be available. Jimmy Treybig, W6JKV, a leading expert on 50-MHZ propagation will be the banquet speaker. For registration information contact Tad Danley, K3TD at (770) 513-9252 or by e-mail to:

k3td@amsat.org

DAYTON TRAVEL

If you will be flying to Hamvention '97 from west of the continental divide, be aware that airfares this year appear to be unexpectedly high. An alternative for west coast hams is to fly to nearby Columbus and driver in from there. This, because the cost of airfare and auto rental seem generally lower.

For example, during a recent sale period round trip tickets from Los Angeles to and from Dayton went from $599 down to only $369. At the same time the fare to and from Columbus dropped from the same $599 to an all time low of $153. Needless to say that the Newsline team and many other California hams bought tickets at that time. And just last week one airline was offering a $112 round trip to Columbus from Phoenix Arizona.

Also, some rental cars seem to be averaging about five dollars a day less in Columbus which is only an hour and fifteen minute ride away from the HARA Arena Hamvention site.

(Via Newsline)

(*****

QSLING MIR

In DX, Dave Larsen, N6CO, the U.S. Mir QSL Manager for contacts made with Mir crew members says that cards sent to him must include the date, time, and mode of contact. To confirm contacts with the Mir packet radio personal message system you must also include the message number issued by the automated personal message system on your QSL.

Send QSLs along with a business sized, self addressed, stamped envelope to:

N6CO
Box 1501
Pine Grove, CA
95665

And oh yes. This is strictly for ham radio contacts. N6CO does not handle cards for SWL reports.

(Via ARRL, AMSAT-BBS)

FCC DONATES COMPUTERS

Finally, have you ever wondered what the Federal Communications Commission is doing with its surplus equipment as a result of the downsizing it has experienced the last few years. According to the trade publication Radio World, one of the things that it does is to donate its surplus computers and associated electronic equipment to seven schools in the Washington, D.C. and Maryland area,

On February 1st, the FCC's Compliance and Information Bureau's Columbia, Maryland Operations Center hosted what the agency calls a "computer reconditioning day." Parents and faculty members from the seven schools joined FCC staffers test and recondition a number of surplus computer systems. Once thoroughly checked out and operational, they were handed over to the schools for immediate use.

The FCC says that its initiative supports the goals of the National Administration and its continuing effort toward developing easier access to information and technology to all students. Radio World says: "Nice job FCC." We at Newsline definitely agree.

5410. Anyone with a Bendix King..?

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-09 00:00:00 UTC
From: eplatt@127.0.0.1
Message-ID: <33225bc3.431486@news.wco.com>
Source record: 202914

Anyone out there have a Bendix King LMU type 14 channel HT? Few
questions.. I picked up a VHF version. It blanks the screen when I key
up?Is this normal? I had a UHF, and it didn't do that. Also, on the
battery, looking at it from the face of the radio 'up', which contact
is + and which is -? I have a generic rat shack conditioner/charger..
Is there any way to increase the bandsplit to cover 144-148? When I
put 144, it accepts it, but when I go to that channel, it shows Ch 0
in the screen.
Lastly, how much is the upgrade to 210 channels/alpha, and can a
dealer do it??
Thanks..

I'l be in HK for business next week and was wondering about picking up some new gear -- Yaesu's FT-50R dual-band h/h is top of the list! :>

Has anyone here bought gear in HK? Are the prices that much cheaper than at home (for me, home = Australia)? What shops can you recommend, which should I avoid?

In short, are there any HK-savvy amateurs to help a first-timer from getting burnt?

Thanks,

df

(ps. sorry for the cross-post but I wanted to make sure I got a good spread of fellow amateurs who may have 'been there, done that').

>Looking forward to getting my 5WPM , but, the question is;
>Is it worth it?

You bet it is! It will be an entirely new and wonderful world for you!

>At 5WPM there isn't much space in the HF
>band that you can use,

80m: 3675-3725 kHz (regional and continental comms at night)
40m: 7100-7150 kHz (listen carefully between the SW stns; use a filter!)
15m: 21.1-21.2 MHz (daytime world-wide comms as the sunspots pick up)
10m: 28.1-28.5 MHz (")

With those segments you'll have just about the same propagation
capability as the rest of us; you'll be able to experience local,
regional, national, and international comms.

Older HF CW transceivers running the Novice/Tech+ legal limit of power
can almost be gotten for free; check out your nearest swapmeets.
I had a Galaxy GT-550 *given* to me (capable of 550W input but really
no reason to run it over 50W on CW). But please consider doing some
building - start with an HF CW kit if you're unsure of your building
ability - it's a real joy to communicate with other folks using a rig
you've built yourself.

Attention fans and frustrated consumers of the Usenet Newsgroups! Announcing

*** News Rover ***

No more manual shuffling through reams of useless text! No more manual decoding of encoded images and other files! No more manual reconstruction of multi-part messages! No more waiting for long downloads!

News Rover DOES ALL THIS:

o Scans newsgroups you specify while you sleep, work, and play.

o Automatically downloads messages and attached files so that they are available for instant access when you are ready to review them.

o Decodes attached files of all types (UUencoded and MIME base64).

o Displays a picture gallery of collected thumbnail size images with quick-action keys to delete, view full size, and save to permanent collection.

o Selects messages based on include and/or exclude criteria to help you find a needle in a haystack and eliminate spam. You can even use complex selection expressions with AND, OR, NEAR and NOT.

o Supports multiple "interest groups," each with sets of newsgroups, selection expressions, message database, and picture gallery.

o Remembers files already extracted and eliminates duplicates automatically.

o Saves parts of multi-part files, searches for the missing parts, and rebuilds the entire file when the last part arrives. It even combines parts found on different days and in different newsgroups.

o Operates on a schedule you set up to use your phone line only when you don't need it.

o Automatically dials the provider and hangs up the phone when it is finished.

o Works with almost all Internet providers and news servers.

o News Rover is multi-threaded so you can read messages and view pictures while it downloads and decodes more messages.

News Rover was designed and written by real-life Usnet newsgroup junkies!
With News Rover the news is ready when you are!

But how often does it happen like that? As soon as the code requirement is dropped, there'll be the same whining about the technical requirements. After all, if you buy your radio, why would you need to know the electronic theory?

In fact, I heard the first mutterings of it on 'Ham Radio & More' yesterday. The host rattled on about reducing the technical requirements. BTW, the host is anti-code.

The way I see it, the motivation in most for removing the code requirement is not to rationalise or modernise the tests, but to make them easier.

If I had my way, I would keep the code requirement and increase the technical difficulty. Of course, that'll never happen. The lowest common denominator always wins in the end (watch the TV for a few hours to see what I mean).

I have two SPDT coax relays that also have a pair of external contacts. They are used but in working condition. Have you checked lately on the new prices on these relays. New ones now run $240. and of course, I am not asking for that much. $35. each, is the price. Add $3.00 each, for shipping. A Postal Money Order is the method of payment. You send it and on receipt, I will mail the relay(s).

The Kenwood TH-79A also does this, and it is easily modified for public service use, if you have need for it.

This radio ran me $525 in NYC, and has two separate transceivers usable for VHF/UHF, VHF/VHF, and UHF/UHF.

>know the electronic theory?

Recognizing that Morse testing is outdated and inappropriate today
is not in itself giving in to the call for reduced test standards.
I agree that maintaining standards requires diligent effort. But
uncertainty about our ability to maintain those standards should not
be used as justification to retain an outdated test element. After
all, we did wipe out vacuum tubes from the theory tests (except
maybe Klystrons). Further, perhaps we've gotten lazy about maintaining
the theory test standards because we've counted on Morse testing as
an "anti-CBer" barrier for so long. Forcing ourselves to properly
structure a series of theory tests that can't be memorized and
properly establish an increasing level of relevant knowledge, pertinent
to the privileges that are granted, would be more useful than relying
on an archaic coding system that no one else uses any more.

As to why you should know theory if you only buy your radio, the
answer is because the license gives you the privilege of building your
own radio and using it on the air without FCC testing, regardless of
your intended use. Further that the reason for the existence of an
Amateur Radio Service at all is to 1) advance the state of the art,
2) provide emergency communications in time of need, 3) provide a
trained pool of technicians and operators in time of need, etc. To
say that all you want is to buy, then is to say that you do not want
to fulfill the purposes of the ARS charter; no need then for us or
the FCC to support the grant of a ham license. There's always CB,
FRS, etc, for those who want to buy commercial gear and yack.

While you don't need to be able to design and build your own station
to be a ham, the ability to hook up a 12V battery, jury rig an
antenna, understand propagation, etc, are relevant to the majority of
the ARS charter goals. To the extent that all someone wants is to
DX or contest with a commercially purchased rig and a commercially
installed tower and beam, then I would say that is a "ham" who is

not supporting the charter. To the extent that the ham is constantly tinkering with the station and learning how to eke out better performance and then using DX'ing and contesting as objective measures of improvement of operating skill, technical knowledge, and station performance, then that ham is supporting the charter.

This is all very well in theory, but the chances this'll happen are low. The tests have been simplified pretty much each time there was a change. The cries to remove this 'archaic coding system' are (IMO) made mostly by people who want to get onto the HF bands more easily. A generalization, but it's how I see it (from what I've been reading). I'll wager if they succeed, there will be no corresponding increase in difficulty in the technical components (possibly quite the opposite, read on ...).

>...<SNIP>
> As to why you should know theory if you only buy your radio, the
> answer is because the license gives you the privilege of building your
> own radio and using it on the air without FCC testing, regardless of
> your intended use.

Of course, and that is why I want it to be made stricter. However, the majority of new hams don't build their radios, they buy them. As I said in my previous post, I have heard already rumblings about simplifying/removing the technical component (on the "Ham Radio & More" radio show, no less) as it isn't relevant to most hams.

I entered Ham radio as much for the pleasure of building as for operating. I fear that if they remove the technical components (and they are starting to cry for that), the FCC will then require type approval of home built equipment. It is, after all, a perfectly logical next step, after removing the technical requirement.

Here's something for you to ponder: most homebrewers in my circle are avid CW fans. All those who are not interested in homebrewing their own equipment (in my circle) are no-coders. I'm not denigrating no-coders, merely making an observation.

Well, it's an "even better" part of town, until you move in there,
then I'm sure the property values will plummet.

: Icom offers or one from another company? Also, I will probably get a
: MFJ-969
: tuner (for a multiband dipole or a G5RV) to go with it since their AT-180
: automatic
: tuner seems too expensive, any comments???

Eric, a number of fellow club members and I bought 706s shortly after their introduction, and we bought one for the club, as well.

No one that I'm aware of bought the Icom PS, even one guy that we kid about buying every new gizmo available. He did buy the ATU, which most of us consider to be too expensive, even if we do have the extra discretionary income.

We all bought Astron power supplies, primarily the RS-35M. It's rated at 25 or 30 watts continuous duty cycle, which is fine for the 706 - it draws 20 amps at full power.

My own opinion, FWIW: unless you plan to buy other Icom gear that needs an external PS, or unless esthetics are important, the Icom PS is *way* overpriced. Same goes for the ATU. I bought the MFJ model 949. Guess I just miss having *something* to tune, with these new radios. :-)

Greetings all,
I've got an Alinco 560T that I'm trying to track down a users manual for. I lost the manual in a move and I'd really like to pick up either a scanned or a text copy of the manual.
I'm also trying to track down a few of the 2 volt batteries for the radio since mine have all died.

Thanks in advance for the information and help. I've got text versions of the manuals for the 580T and the DR-600 if anyone needs them.

Snide snipes don't answer the question.
How many ham repeaters use CW characters for a roger beep?
That is what it is, a CB roger/over beep. The people seem the same too!
There is no difference between 11 and 2 meter CB. Radio Shack has
cemented that in place. Maybe they ought to make a 2/11 meter dual
band radio with roger "K" beep so you elite operators can feel better.
You still haven'answered his question: not a good example for those
of the "CBers" you want to learn outdated/inefficient CW!

Glad to hear a sensible reason for code test. I just passed the 20WPM for my Extra. I can't say that I particularly *liked* it, but I know that I have something that the WHINERS will never have and can never take away.

Subject: Packet/Satellite tracking shareware programs.

Can anyone refere me to any good packet and Satellite tracking programs? I have found alot of programs on the amsat webpage but there are just too many to choose from. Rather that download each one and try it out, I thought that maybe someone out there could refer me to the good ones.

Thanks in advance.

Subject: Real-Time DTMF Decoder for Windows 95!!!

WinTone 1.51 Real-Time DTMF decoder/Scanner monitor for Win95/NT is now available, and it runs 50% faster than before - Making it run great on most 486 machines! Here are some of the features that are available :

* Real-Time DTMF decoding via your Sound Card
* Extensive Tone Logging/Transformation
* Decoding DTMF tones from WAV files
* Squelch controlled Scanner monitoring to a WAV file
* DTMF Triggers - Launch an event when DTMF tones are heard
* On-The-Fly Save to a WAV file while you are decoding
* Tunable options to fit your listening environment
* NOW 50% FASTER - WILL RUN ON MOST 486 MACHINES!!!!

Come take a look for yourself - You wont regret it!

Subject: Strange SWR

Thanks for reading this. I have a strange situation with my Kwd 520 SE
and a new G5RV Shorty ant. When working phone the swr is about 1.5:1
and that is very acceptible. However when I switch to cw and send a
tone the swr jumps to around 3:1 and this is too high. I transmitted a
cw tone into the dummy load and it was flat so the radio seems to be
fine. I use a tuner but this happens while on the same frequency. The
question is whether the G5RV will accept the phone signal but not the cw
one. This a new one on me so feel free to offer any ideas. Tnx de
David N9VFR :-{

Two questions:

Are you sure you "set" the SWR meter? If so, how do you insure
you're talking at the same volume when you make the measurement
on SSB.

Are you at the same frequency for both measurements>

SILENT KEYS

VK2LSH John, or Swampy as many knew him, died on Tuesday Morning
25th February 1997 at 8:30am. It was a terrible shock to many radio
operators in the Hunter Region.

John was a friendly bloke who would help anybody. Our best wishes go to
John's family and friends. The radio is considerably quieter this week and
we have lost a good mate.

-- VK2ON Aaron & VK2MSD Steve

The late Arthur Harris VK2FFH, a founding member of Fisher's Ghost
Amateur Radio Club Inc. passed away last Friday night (28/2/97) just
minutes before starting the Club's 80 Metre Net. He will be missed by
family and friends. Lest We Forget.

-- Chris Newton VK2ZCJ

Vale John VK2LSH and Arthur Harris VK2FFH

During the month of March, the Fisher's Host ARC Inc will hold a special
event award in memory of Arthur Harris VK2FFH. All contacts to be with
the club station VK2FFG on 3.580 MHz. The cost of the award is $5.00
Aust. and applications to be sent to the Awards Manager, FGARC Inc., PO
Box 35N North Campbelltown 2560. Note: all funds will be donated to
Arthur's wife, Bid Harris.

-- Chris Newton VK2ZCJ, FGARC Publicity Officer

DIVISIONAL NEWS

Because the last Sunday in March is Easter Day, the March Trash & Treasure Sale will be held on the Sunday After Easter - that's the 6th of April.

The next examinations will be held at Amateur Radio House Parramatta on Sunday 23rd March 1997. Candidates who have lodged applications are requested to report at 12 noon, and the exams will start as soon after that time as possiblem but no later than 12.30pm.

Please apply to the office for the necessary forms. Applications close on Thursday 13th March. Acceptance cannot be guaranteed for any applications received after that date.

--Submitted by Eric Fossey VK2EFY - Divisional Secretary.

THE AFFILIATED CLUBS NET IS BACK

The Affiliated Clubs Net is to be resumed on the third Wednesday of the Month commencing 19 March at 7.30 pm EST on 3.595 MHZ plus or minus QRM.

So clubs I hope to see at least one and possibly more from each club on air.

--Ken Westerman VK2AGW, Affiliated Clubs Officer.

WICEN NEWS

This month sees the Central Coast meeting, on Friday, and the Hunter meeting, on the 17th; the latter meeting will feature a talk by Telstra. Although not strictly a WICEN event, of interest to WICEN members is the Wyangala Triathlon, in the Orange area, to be held on Sunday 16th March; enquiries are directed towards Peter VK2ETK or Adam VK2XRA. Following this is the VRA Mid Year Conference, at Wombeyan Caves, on the weekend of 22nd-23rd March, at which WICEN will be well-represented.

On 13th April is the Forster Triathlon. This is an all-day event, early morning to late evening, and about 25 operators are required for this event; food, drink, fuel and T-shirt are provided. Operators will need to bring equipment for 2m and 70cm voice, and will also need to contact Steve Pettet VK2KXQ, phone number (065) 55-3177, or PO Box 122 Forster, for further details. Following this is the Watagan Mountains Car Rally, over the weekend of 19-20th April, for which Andy VK2XRX is the contact; around 20 people are required for this exercise.

Events further away include the Bridge to Bridge Speedboat Classic, run by David VK2KLX, on 4th May; the Hawkesbury Emergency Expo, run by Alan VK2YYJ, over 16th-18th May; the Colo 24-hour Horse Enduro, also run by Alan, on 12th July, and the Oberon Car Rally, also also run by Alan, on the 11th October; the Hawkesbury Classic Paddle is organised by Kevin VK2CKD over 18th-19th October and the annual Bungonia Cave Rescue will be on the weekend following, over 25th-26th October, with either Dave VK2KFU or Mark VK2XGK in charge.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or info they would like published, then please contact the Publicity Officer. If further information about WICEN (NSW) is required, please contact the State Coordinator, Alan VK2YYJ, on 015-097-217.

WICEN (NSW) has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". It is generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics, and contains pointers to many emergency-related pages likely to be of interest.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

MAGAZINE ROUNDUP

Here again is a summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the March issues of the various magazines.

"Electronics Australia" wonders whether Pay-TV is really worth it; a case is made for more women in electronics; digital cameras are surveyed (who will be the first to use one on ATV?); pay rates for electronics technicians are discussed; the PC-driven arbitrary function generator is continued; simple noise-makers are made; and one-valve reflex receivers receive a mention.

"Silicon Chip" also wonders whether Pay-TV is really worth it; connecting computers together with wires is discussed (although the true die-hards are using NFS over RF TCP/IP); those short of sight (such as your scribe) can build a "jumbo" LED clock; a replacement for the RGB-to-PAL chip used in a previous TV pattern generator is covered; some fascinating history on radio-controlled models is revealed; a clever continuity tester is contructed; the series on digital oscilloscopes is continued; and the mysteries of grid bias are explained.

"Amateur Radio" promulgates the Morse debate; a simple signal injector is built, as is a balanced feeder balun adaptor; the Z-Match is summarised in gory detail; a computer mouse becomes a code oscillator; instant scaffolding solves an antenna problem; comments on the 6m band plan, especially alternatives to the 50.110 calling frequency, are sought; and a simple latch circuit for repeaters is constructed.

"Radio and Communications" constructs a weather satellite antenna; the dumb things that Amateurs do to their equipment are revealed; the point of moving away from a calling channel is emphasised; some variations on common tools are described; and the final word on SSTV operations is presented.

Meanwhile, on the Green front, "ReNew" (formerly known as "Soft Technology" visits homes powered exclusively by renewable energy,

reports on the Sunrace '97, the Adelaide to Melbourne solar car race, presents a buyers guide to independent power supply batteries, presents a guide to soldering for the beginners, and describes a shunt regulator project for solar, wind or hydro power supplies.

Be listening next month for another summary of the local magazines.

-- Dave VK2ZTB

A REQUEST FROM THE UK...

Many of you may recall Arie VK2AVA, who was very active on 40m SSB several years ago, and was usually found working into Europe via the long path each afternoon. It appears that Arie's health deteriorated in recent years, and he has since relinquished his callsign.

One of Arie's on-air friends has been trying to get in touch with him, but so far without success. If anyone knows the whereabouts of Arie, ex-VK2AVA, and how he is, would they please get in touch with Ron, G6LX. Ron's address is in the callbook, and he can also be reached via email at: com.tech@virgin.com

--Peter Nesbitt VK3APN

...AND A REQUEST FROM NEW SOUTH WALES

Bernie VK2VBH Desperately needs an operating manual for an SOE Suitcase Radio set. The model is a TYPE 3 Mark 2 any offers of asistance would be MORE than appreciated.

Bernie can be contacted by phone on (043) 845-442, or by fax on (043) 852-051.

-- Bernie VK2VBH

DX NEWS

SPRATLY ISLANDS - 9M6TCR and 9M6TPR camn be heard from mid March. The importance of this operation is that they will be operating from Layang Layang, which is part of the still rare Spratly Islands.

ANTARCTICA - EM1HO will be active from the Ukrainian Vernadsky Base, IOTA [Islands on the Air] AN 006, around the beginning of March. Also, 3Y2GV, heard of late on 18.090 MHz, appears to be active from the Queen Maud Base, IOTA AN 016.

SOUTH SHETLAND ISLANDS - HF0POL is active mostly on CW, 7 kHz up from the band edge and can be found on 40 meters around 0100z and later. During his daytime hours he is very busy in the camp.

REUNION ISLAND -, FR/F5MNW or TO5UFT will be active from 22nd March to 6th April, mainly on CW.

SAINT MARTIN - , FS5PL/P is active this weekend from IOTA NA 199, possibly with an FS9 callsign.

DOMINICA, J7 will be active 11th to 19th March on 40 through 10 meters, using mainly CW. There may also be some SSB activity. Callsigns to be issued upon arrival.

JAN MAYEN - JX7DFA. can be found on the lower bands. For CW, check 3512 and 1824.5 kHz. For SSB, check 3599 and 1842 kHz. There may also be some RTTY operation once an RTTY interface problem has been fixed.

AUSTRALIA - The Eastern and Mountain District Radio Club will again activate VI3GP on March 6 through 9 for the Formula One Grand Prix Race in Melbourne.

SOUTHERN COOK ISLANDS, ZK1JOO will active in Rarotonga until Monday.

-- ARRL DX Bulletin 12, dated 6th March, 1997

CLUB NEWS

VHF DX GROUP

THE VHF DX GROUP IS AN INFORMAL ASSOCIATION OF ACTIVE VHF AND UHF OPERATORS. THE GROUP WAS FORMED TO PROMOTE NON-REPEATER ACTIVITY AND TO HELP JUSTIFY OUR GENEROUS ALLCOATIONS IN THE VHF SPECTRUM AND ABOVE.

THE NEXT MEETING OF THE VHF DX GROUP WILL BE ON TUESDAY 18 MARCH AT AMATEUR RADIO HOUSE, PARRAMATTA, STARTING AT 7:30 PM.

AT THE MEETING WE WILL BE HEARING MORE ON AIRCRAFT ENHANCEMENT PROPAGATION FROM GORDON MACDONALD VK2ZAB FOLLOWING HIS INTERESTING PRESENTATION ON THE TOPIC AT THE WYONG FIELD DAY.

DON'T FORGET THE TUESDAY ACTIVITY NIGHTS ON 144 MHZ AND THE GROUP'S SUNDAY MORNING NET ON 146.550 MHZ FM AT 11.00 AM.

-- SUBMITTED ON BEHALF OF RICHARD SOULIE VK2ARS.

THE LIVERPOOL AND DISTRICT AMATEUR RADIO CLUB WILL BE HOLDING ITS MARCH MEETING NEXT WEDNESDAY NIGHT AT THE SCOUT CAMP AT GLENFIELD JUST OUT OF THE ARMY CAMP AT MOOREBANK.

THE GUEST LECTURER THIS MONTH WILL BE MICHAEL VK2MJ WHO WILL BE GIVING A LECTURE AND PRACTICAL DEMONSTRATION ON PACKET RADIO WITH PARTICULAR EMPHASIS ON NETWORKING AND LINUX WHICH IS A DERIVATIVE OF UNIX AND MIKE WILL ALSO TOUCH ON TNOS.

MIKE IS THE OPERATOR OF THE VK2MJ HF GATEWAY WHICH CONNECTS HF OPERATORS TO THE SYDNEY PACKET NETWORK.

THE MEETING IS AT 7.30 PM FOR A PROMPT 8.00 PM START.
VISITORS ARE WELCOME AND COFFEE AND BICKIES ARE PROVIDED.

-- VK2TSR GARRY FOR THE LIVERPOOL AND DISTRICT ARC

ST GEORGE AMATEUR RADIO SOCIETY

AMATEUR LICENCE CLASSES

The St George Amatuer Radio Society (Inc) will be holding classes for persons interested in obtaining their amateur radio licence. These will commence on Monday 7 April 1997 and run for 23 weeks. The venue will be the St George Masonic Club, 86 Roberts Road, Mortdale between 7:30pm and 9:30pm.

Persons interested in attending should contact the club's Education Co-ordinator, Mr. Jim Button on (02) 9521-7303 at the earliest opportunity.

-- John Hams VK2JH, President.

Still with St George, the Society will be conducting the annual Alan Pettiford memorial auction on Saturday the 15th of March 1997 in the function room of the GRANDVIEWS BOWLING CLUB 821 Forest Road Peakhurst with the auction commencing at 1200 noon under the direction of our regular auctioneer Dennis.

The doors will open at 10:00am for Sellers to place equipment on display & complete registration and ticketing requirements. Buyers are welcome from 11:00am to inspect goods for auction, with the auction commencing at 1200 sharp.

All amateurs and other interested persons are welcome to attend. This is a good opportunity to bring along all that gear you didn't sell at Wyong!!.Should you require further details please contact Paul Smith VK2ZSA on 9892 0855 in business hours or 9520 7322 after hours.

-- Paul Smith VK2ZSA

ORANA REGION AMATEUR RADIO CLUB

The Bi-monthly meeting of the Orana Region Amateur Radio Club will be held on Thursday 27th March at 8 PM in the Scout Hall in Talbragar St Dubbo.

Mr, John Moss from Telstra Dubbo will talk on Fibre Optics into the 21 century.

--Article Submitted by Ken Westerman VK2AGW Dunedoo

AUSTRALIAN AMATEUR TELEVISION CLUB

HORNSBY & DISTRICT ARC

The next mid-monthly meeting, is on Tuesday 11th. March 1997. At 8:00 pm. In the Mount Colah Communicty Centre, Pierre Close, Mount Colah. (Located near the Eastern Entrance to the Railway Station.) This is the Clubs informal get-together, to discuss any technical problems, that we may have encountered. The JOTA sub-commitee, will have a meeting at the same venue, we trust that all on the Sub-committe can attend. Visitors are most welcome.

Training classes, are held each Thursday, evening at 7:15 pm, the cut-off point has been reached, but for more information please phone, Tony VK2BTL on 9487-3383.

The club conducts, a net every Monday night, at 8:00pm. on VK2RNS. The frequency is 147.250 with a positive offset. Feel free to join in. All are welcome. Listeners set your scanne to 147.250. remember, we would like to hear from you, or better still we would like to see you at one of our meetings. Visitors are most welcome.

Should you wish to know more about the Club, or its activities, please write to:- H.A.D.A.R.C. at Post Box 362, Hornsby, 2077. or contact the Publicity Officer, John VK2WRT on 9807 2490.

-- John W Turner VK2WRT - Publicity Officer

GLADESVILLE NEWS

The Gladesville Amateur Radio Club Incorporated would like to remind members and visitors that the March general meeting will be held tomorrow night, the 10th. It will be at the usual venue of Number One, Birdwood Avenue, Lane Cove with a 7.30 pm start. There is a public car park opposite the venue.

For contact with Gladesville about television, taped lectures or club matters wither write to GARC Inc at P.O. Box 48 Gladesville 2111 or telephone (02) 927 0530 [repeat]

A reminder about the Test Transmissions on Wednesday, Friday and
Sunday evenings via VK2RTV Channel 35 in Sydney. On Wednesday and
Sunday relays are made through VK2RFM Oakdale on 1250 MHz and on
the 444 MHz ATV channel through VK2RTG Central Coast and VK2TVG Sydney.

-- 73 Keith VK2ZZO President / TV Co-ordinator

COMING EVENTS

If you would like to submit a news item for inclusion in the weekly
broadcast, please send it to us by one of the following means:

by post to the Divisional Office, PO Box 1066, Parramatta NSW 2124;
by fax to (02) 9633-1525;
by packet radio to BCAST@VK2WI.NSW.AUS.OC, or
by Internet e-mail to wiansw@sydney.dialix.oz.au

Please note that the deadline for news items is 2pm on the Friday
preceding the broadcast; if submitting news items by packet or internet,
please allow for forwarding delays in the network.

If submitting printed copy, please:
submit your news item on A4-size paper;
double space your text;
write on one side of the paper only, and
use a plain font such as "Arial" or "Helvetica", 12-point or larger.
This is especially important if sending your news item by fax.

Please avoid using abbreviations and shorthand, check your spelling,
grammar, and punctuation, and use the exact words you wish the
announcer to say on-air. Remember, the more care you take in preparing

your news item, the better the announcer will read it.

BROADCAST ROSTER
Next Sunday, 16th March 1997

Subject: Win! Log Program

Found a great contest that gives away free logging software !
And the site has lots of other neat stuff too ! Like links,
shareware downloads, etc. Thought you'd like to know.

Go to : http://www.esdi.com/log-it

PS: Contacted the webmaster and was advised a real-time chat
service was going to be implemented soon ! Sounds like a
good chance to rag chew when the bands are down and maybe
share some good information with fellow hams ? I've
bookmarked this site for future reference.

>two major areas.

And it does not increase SSB privileges in the 20 meter band of any
licensee. SSB sub band should be pushed down to AT LEAST 14.125.
Anything less is unacceptable.

This is why Drew has proved my point. As part of the anti-code group, it has
been shown that he'll act the same as pro-coders whe the conditions are
changed. I.E. "Let them speak English if they want to talk to us."

Went to check the time on WWV before the test and could not copy due to
spanish QSO's on 10 & 5 MHz......
Copied the 160 mtr message 449 here in Roswell GA until some *spanish
stations* came in 1 kc lower on USB - that kind of ruined it.
Went to 3840 and couldn't copy due to interfering CW jockies that never
ID'ed. What a mess.

M>Wrong. Driving is a necessary and useful skill. Morse code is not.

So don't learn it and spend your time on VHF/UHF! Also, look into GMRS
and CB services that do not require any morse code exam.

Correct me if I am wrong, but did you just admit that the code test is a hazing ritual? Your fellow procoders are going to be cross with you. BTW what business does the government have participating in a hazing ritual?

> Ham radio has always been part of my life and is in my blood.

OK ... many of us could say the same thing.

> Learning morse code is part of the brotherhood of ham radio.

So sez you ... many of us who have been hams for many years
don't agree ...

> When you were a kid and wanted to join the club, you had to
> swallow a live gold fish (or had some other gross thing to do),
> but if you did not do it you were not in the club.

Well getting a license from the federal government to access
publicly-owned spectrum is NOT a kid's club ... nor should the
access requirements extablished by the government mandate
that sort of ridiculous hazing ritual.

> Just because you had to swallow a gold fish did not mean you had to like
it
> or had to do it again. Same with the morse code, if you don't like it
don't
> use it. Just learn it and get on with your life.

See the above paragraph ... we're debating the relevance of government
regulations, NOT the hazing ruitual associated with joining the Elm Street
Third Grader's Treehouse Club.

> We all had to do it, what makes you think your so special.

There's the REAL reason ... the olde fartz "We had to, so so do you!"

Subject: Setting a good example.

We Americans have a moral obligation to show the rest of the world how to
live properly. We have been trying to get the rest of the world to stop
wallowing in filth and ignorance and learn to live like true human
beings. When we allow our standards to be compromised we are actually

hurting inhabitants of less fortunate nations as well as ourselves. I am proud to be an American and I feel sorry when I hear about others who cannot provide for their families as well as we do. If these people would just follow our example then they would come to know the joy and fulfillment that comes from living a correct lifestyle. Then they can stop begging and complaining about us "ugly Americans". Teaching by example is the best form of education.

Hi Dave,

The SWR of your G5RV system on any given frequency will be independent of mode (in other words, it will be essentially the same for SSB or CW).

My uneducated guess is that the *apparent* lower SWR on SSB is due to the fact that your SWR meter is "slow" to react to voice peaks, and thus never rises to show actual SWR, except when held "key down" in CW mode.

73, Hans

Subject: Think about this

You, dear sir, make conclusions that you can not support. Maybe you did
not read close enough. Obviously, I DID NOT memorize anything. Seeing
that I repaired Microwave Systems! That takes a lot more than I needed
to know for the ham test. Second of all, if you look at ham as only a
service, then you have missed the point! That is all that I have to
say.

Subject: Why I changed my mind on the code...

ke4jcd (Ke4jcd@cris.com) wrote:
: One I'm talking about people that don't have a Hearing or other
: problem. If you have a hearing problem you can get a doctors note and not
: have to take the tone test but a light test instead. So that not a good
: WHY to drop the code for all just becouse you can't hear good. Not ALL
: people have a hearing problems like you. Now you can take a light test
: instead or have the Test droped if you have a hearing problem is
: UNDERSTANDABLE.

Hmmm. This brings back the sugestion of replacing the code requirement
with a requirement that the applicant show proficiency in his choice
of morse code, smoke signals, or jungle drums.

: BUT TO DROP THE CODE TESTING FOR ALL just BECOUSE SOME
: CAN'T HEAR GOOD IS NOT A GOOD REASON!!!!!!!!!!!!!!!

I agree! It should be dropped because there is no reason to keep
it.

: Frist of all, this is a Radio Hobby. CW is a part of that hobby
: just as is SSTV, ATV, PACKET, SAT, ect. I believe that if you want to be
: part of that hobby you should have a understanding of ALL FORM's of that
: hobby. Or what's the point in joining it in the frist place?

In most hobbies, there is no reason to be even vaguely familiar
with forms of the hobby in which you hold have no interest. For
example, someone who likes crawling through caves has no need to
learn about underwater cave diving if he is never going to try it.

For that matter, a person who grows flowers in the yard does not
need to be familiar with vegetable gardening.

It is easy to come up with examples of hobbies where one does not
need to understand every aspect of the hobby in order to enjoy it.
In fact, I can't come up with a single hobby, including ham
radio, where it is necessary.

: CW is not the
: problem. People are! People think this is a RIGHT, but it's not. IT'S A
: HOBBY!! join like stamp's, coin's, ect. CW is a PART of the WHOLE hobby!
: If you don't like something then you don't join. That's very simple. just
: When you went to school did you care for all the subject you took? Should
: we drop the one's you don't like just to make you happy? NO! So there's
: the whole point!

Are you suggesting that becoming educated is a hobby?

Seriously, there are many, many courses that you can take if you
want, but are not required. By your argument, you would have
everyone take everything.

: CW is part of the hobby! See I'm a Amateur Radio person
: and injoy it very much. Just becouse I don't like DXing, should I have it
: removed? NO! It's a part of the hobby!

Are you suggesting that those who don't want the code requirement
are trying to ban code? Far from it. I've never heard of anyone
trying to do that.

: I like VHF and UHF to talk local is
: fine to me. For I'm a NO-CODE TECHNICIAN and that all I want from the
: hobby! Some like DXing well then to be part of that you should know more
: about the hobby! RIGHT? CW is fun if you like it. I know lot's of people
: that all thay do is CW. you will never hear them on VOICE. then some just
: do voice. but it's ALL part of the WHOLE!

While we're at it, since modern radios have integrated circuits,
why not require applicants to show a certain level of proficiency
at designing and building them (at least on an emulator)?

As for myself, I don't have a license. I seriously looked into it
and decided not to bother until such time as I don't have to
learn code (actually relearn, as a boy scout I could send and
receive code by lights and flags).

Eric Johnson

Do you know that you can remote that rig from a handheld? Also if you
happen to have a TH79A it will remote the 733 with single button
commands... They both have a hidden mode that allows them to work
togather...jim

Subject: Freebanders

I really don't think that this is the correct forum for this, but that is what makes America FREE!

I have lived in Japan for many years, (about seven) and I will tell you that I enjoyed it very very much. As, for Americans being lazy, well I did'nt have to learn that from Japan, this is something that WE know. Ok, ok, cool it down, not everyone is lazy, not by a long shot, but, we really are.
As for Japanese working 12 days a week...not really, just 6. And they do typically work about 14 - 16 hours a day. Most Japanese men are required to commute about 2 - 4 hours one way, and many are required to take a small (relativly) apartment away from home, and only visit with thier familys on Sunday.
Holidays, oh yea, Japanese do take holidays, and sit in traffic for nearly 60% of thier holiday (and thats only 30% more than normal). In the Japanese work enviroment, if you don't produce you are a failure and publicly humiliated!
As for schools, Japanese schools are the toughest in the World! Teachers have ultimate power of the students. Girls are only allowed to have certain hair styles, wear uniforms, and are punished for having the wrong type of comb or hairbush. They are not allowed to wear makeup, they are not allowed to change thier hairstyles to ANYTHING other than pony-tails! They are not allowed to go anywhere after school except home. Teachers ofter follow students and spy on them! Boys have it hardest, not in the above sence, but in the academic sence. If you don't pass a test you are a failure! (period) If a young boy is envolved in sports, or a young girl for that matter, SECOND place in worthless, and you are a failure!
The job you get depends on what school you go to, and I don't mean highschool, I am talking about college. Students go to school 6 days a week (half day on Saturday), and are forced to attend evening school 5 days a week.
Houses in Japan. They are very small by our standards. Japanese do not get the chance to go house hunting. It is impossible for the average couple to BUY a house, at best they hope that thier parents own thier own house and will pass it down. Take an average 4 bedroom, 2.5 bath house and devide it into 4 and you will see the average family apartment (for about $1,300 a month).
As for the price of meat, I went to a butcher one time and saw a nice roast (about 8 - 10 lbs) the price was $1,500! And, no that was not the expensive meat!
Many Americans don't think that Japanese know how to drive, well, that is BS!
Japanese are required to attend a driving school for a minimum of 3 months (and costing about $3,000), and passing a 150 question, essay type test prior to taking the driving test. Oh, and if your going to drive a motorcycle (which is the absolute best way to drive in Japan) then you are in for a real shock. The licences are broken down into classes depending on displacement size of the bike. For the largest size, 600 cc and above, there is a 95% attrition rate! I challenge any American bike rider to

take that test!
Do the Japanese hate Americans? NO! They wish that they had our freedoms!
They wish that they could tell people to F*** Off! They can't.
Oh, and as for crime, there really isn't any, except for the foreigners.
Japanese don't steal, they are very honest. And they are very friendly.
At first they may be intimidated by us, but they really like Americans and
can not help what some corrupted polititition says!
Do you really belive everything that you hear on the "news"?, do you
really belive everything that your government tells you?, do you believe
everything that you see on TV? Neither do they!!!!
Often we are told that the Japanese are doing this and they are doing
that! Well, do you know what your Govenment is doing? I mean do you
really know?

People who live in glass houses should not throw rocks!

Well, I am sorry for taking up so much space here, but I did want to clear
up some points, and to try and have each side know more about each other.
That is what it boils down to, we are all human, and we had better get
along.

If you have comments about my statements, please send them to me. I stand
by what I have learned by traveling the world, and I know that I am a
better American for it.

And just what the hell is your problem with a person living in a trailer
park? You sound like an egotistical jerk who can only see the material
worth of the world around you. You are missing something important-
Your sanity! Tom
I live in a trailer park and like it.

Never said I was going to. Merely stated that I was surprised that local
homosexual-rights groups didn't. In fact, had you bothered to read my
post (reading doesn't seem to be one of your strong points, not that I am
surprised, since you'd have to pick your knuckles up off the ground in order
to turn the pages of a book and all...) I stated that >I< would never do
such a thing, because people have done the same thing to me.

Naturally, a much more effective method of bringing pressure to bear
would be for homosexual-rights groups to openly boycott the customers
(advertisers) of your radio station, and let the advertisers know why
they are being boycotted. Economic impact is much more effective than
a mere letter-writing campaign. If I really had the inclination to
harass you, Spew, that's how I would do it, but as I've said before,
I'd much rather spend my time with my kids than you, Keikikane.

>Your attorney must have advised you that it wouldn't be a wise move, huh?

My attornies advise me of many things. Unfortunately for your ego, you're
not one of them, and are not likely to be anytime in the near future, either.

Subject: Gateway internet to ham radio???

Hello;

I have a question. I know if i read this newsgroup for a few weeks Ill
proabably will find out but I need to know as soon as I can.

Is there a gateway server you can log into and get on a repeater from
the internet. I have a ticket NI0U but am an apartment dweller and
cant use my ham gear. Would like to get on a repeater and get involved
with hamming again.

Thanks

Subject: H A A R P test comments?

Hello Anybody,

Copied the test here in the San Francisco Bay Area, on 03/08/97 @
04:30 utc. The signals were fair to good, s7-s9 on a ts-50. However
when I got up this morning I had discovered that my 17 meter double
bazooka antenna was on the active switch!!! Oop`s!!!! Anyone have a
signal report in the Central California Area that was on a resonant
antenna? And your signal reports? Thanks, Anthony A. Andrianos KC6KIM

Hi, Rick

Try my upgraded Morse Code program, International Morse Code Processor
(IMCPW312.ZIP), at

http://www.simtel.net/pub/simtelnet/win3/ham/imcpw312.zip

Below are its major features:

IMCPW (International Morse Code Processor for Windows) v3.12 is a
Windows 3.1 & 95
compatible program which translates program-generated/user-defined text
and text
files to Morse code. Code speed is adjustable from 3-50 wpm with a
character speed
of 10-50 wpm for Farnsworth code. Keyboard Copy window included for

copying code
from the keyboad. "Barred" characters implemented. User can define any
prosign.
Includes a comprehensive help facility, a main menu, three popup menus,
and eleven
code practice lessons. It is Fully customizable from the Options menu. A
Sound
card is not required. Requires 870K of free hard disk.

73,
Lindsay

That's right. Just complain. You can remain anonymous, thus assuring
you
won't be held responsible for making any false or misleading
statements
you may be tempted to print. No worry about libel or defamation for
harming a business' good name, right? Just let everyone know "how you
were victimized." Everyone's a victim. Whine and sue. It's the

American
way.

In Webster's it says that hazing is: oppression, punishment or
harassment. CW IS NONE OF THESE THINGS. CW is a skill.

Take it a little farther: a few years ago it was really hard to post
something to a newsgroup. Now it's not.

Many would say that's a mixed blessing.

club.

But the US government wasn't in the business of issuing licenses for
admission to the club and the clubhouse (frequency spectrum) was not
publicly owned.

Hazing rituals are fine for private clubs, but not for public radio
frequencies.

I do not see the problem with a no code license in HF. Isn't certain
part of
the bands set aside for CW anyway. That way the CW crowd is isolated
from
the Voice etc. crowd. If you do want to talk CW learn without it being
a requirement.
It's a hobby and everyone has the freedom to enjoy it to his \ her own
end.

I am learning CW because right now I would like HF access and it's a
req. but
I still would learn it even if it is not, it is just fun.

Your insults are simply laughable. and I guess it's true. The 'Code must always be" has been the independent thinking throughout hams history.

5467. Which power supply & tuner for 706?

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-10 00:00:00 UTC
From: Viking <viking@add-inc.com>
Message-ID: <01bc2d02$19f1e900$2e08aacf@viking.add-inc.com>
Source record: 202806

I am buying an Icom-706 as my starter rig, should I get the power supply
Icom offers or one from another company? Also, I will probably get a
MFJ-969
tuner (for a multiband dipole or a G5RV) to go with it since their AT-180
automatic
tuner seems too expensive, any comments???
Thanks, Eric viking@add-inc.com

Normally, I don't repost the entire garbage, but this time I think it
is justified.

Here we have a clear cut case of fog.

(In someone's Head.)

I call to yuour attention that a 100 mw CB kid's toy can reach across
a small yard with voice, and reach a mile with CW.

I call to your attention that the crossbow was obsolete as soon as the

cannon came along (everyone like the drews have said so all along) but
the crossbow is standard issue in several parts or our own MODERN
"pentomic army" because they are no more obsolute than the army
itself.

I call to your attention that a director of the patent office resigned

because "there was notihing new to discover" and that was in the early

1800's if memory serves (I was very young at the time).

Are you any relation to the Col. Drew that advised General "Flakey
Frank" to park ALL our aircraft in one big bunch in the middle of
Hickam field just before the Japs got there?

Just thought I'd ask.

ciao

>Kit Manning
>KC5WXF

Dear Sir or Maam as the case may be.
The four bands you can use for code and the other bands
you can use for phone with a tech are intended for technical
correspondence as I am told.

I had no trouble having fun all over the world with five watts
on CW as a novice long ago, and I still recommend that to
learn some of the magic (yes, that word) in ham radio, one
should make at least 50 CW QSO before upgrading.

if one does that, one may learn to recognize sounds that
never are heard by the phone freaks who think CW is obsolete.

They say a word to the wise is sufficient.....

From: peknslk@aol.com
Message-ID: <19970310051800.AAA06693@ladder01.news.aol.com>
Source record: 202811

Hi! I was wondering if the collective net wisdom could offer some advice on this; I recently installed a DX70T in my truck (a '93 full-size Chevy pickup). I've done many successful mobile installations in the past, and applied all the same techniques e.g., power direct from the battery, multiple ground straps added between frame/bed/cab/exhaust, etc.). I also installed a 6M 1/4 wave vertical to a homebrew mount attached to the top portion of the bed, well-grounded.

Before I connected the antenna, I fired up the rig, and turned on the engine, and everything seemed fine (noise floor below the S-meter on the rig). I shut the engine off, attached the antenna, and made a quick call through a local repeater without problem. I then started the engine again, and the noise floor jumped to an S7-8. There is no alternator whine or popping; just plain white noise. This rendered the rig almost useless on 6M. I've yet to try it on the HF bands.

Can someone recommend a method for eliminating the hash which must be coming into the radio via the antenna? I'd sure like to use the rig! :^)

Posts or private email are fine.

Thanks much!

Subject: That Was The Way It Was
Ref: The Radio Amateur Newcommer's Handbook, 1940

The Radio Amateur Newcommer's Handbook was published by the editors
of Radio magazine. Radio was a magazine published, beginning in the
1920's, for Amateur and shortwave enthusiast.
In the Handbook is a chart showing the allocation of the amateur
bands. It was interesting to note that only small portions of the 80
and 20 meter bands were allocated to phone operation; 3900 to 4000 kc
on 80, and 14.15 to 14.25 mc on 20, and this was restricted to the
holders of a class A license. 40 meters was cw only, 10 was 28 to 28.5
mc for cw and 28.5 to 30 mc phone. The 5 meter band was any mode from
56 to 60 mc. The 2 1/2 meter band was all modes from 112 to 116 mc,
1 1/4 meters from 224 to 230 mc, and 3/4 meters from 400 to 410 mc.
Mobile operation was allowed only on the bands above 28 mc. There was
no 15 meter band, as that came after World War II.

The various modes allowed for amateur operation were:
Type A1 - Radiotelegraphy
Type A2 - Radiotelegraphy, tone modulated
Type A3 - Radiotelephony
Type A4 - Facsimile
Type A5 - Television

The license structure was quite different. There were three classes of
license, A, B, and C. Class B was the entrant or "Novice" license. To
obtain a class B license you had to pass a 13 wpm code test in both
sending and receiving. Five minutes of copy was sent of which you had
to copy at least 65 consecutive characters correctly. The written exam

was made up of approximately 10 essay type question on theory. The class B license allowed you to operate cw on all bands where A1 was allowed, If you lived over 125 airline miles from the nearest FCC examining point, you could apply for a class C license by mail. It carried the same privileges as the class B. You could apply for a class A after holding a class B for one year. The class A required taking another another written exam on more advanced theory. The class A license granted you all privileges on all bands.

The book also contained some examples of some of the study questions that you might find on the class B exam. A lot of questions ask you to draw a schematic diagram of a simple circuit and describe how it works, such as; "Draw a simple circuit diagram showing the use of a grid leak bias on a simple vacuum tube oscillator and explain it's operation". Well lets see now, the grid leak connects to the grid, the choke connects to the plate, the ankle-bone connects to the leg-bone, the leg-bone connects to the knee....aw shucks. Or how about, "Draw a simple circuit diagram of a self-excited vacuum tube oscillator using two tubes in push-pull arrangement". Push-pull, hmmm, I thought that was a two-way phone patch.

The advertisements were also very interesting. How about a Hallicrafters Sky-Buddy receiver featuring continuous coverage from 545 kc to 44 mc, six tubes, band spread, and built in speaker. Amateur net--$29.50. Or a Stancor 60-P self-contained 60 watt phone and cw transmitter for $44.80, less tubes, crystal, meter, coils and cabinet. Gee, what's left?

In those days a dummy load was a 40 watt light bulb, and a memory keyer was a little spring loaded lever mounted on a base that when operated up and down caused your transmitter to put out dahs and dits. Held down long made a dah, not so long made a dit. The memory was in the operator's head. It was 1940, and That's The Way It Was.

Believing that Morse testing should go away doesn't mean that the poster is only against it because they can't do it. If you read rec.radio.amateur.policy you would find many posters there with Tech Plus, General, Advanced and Extra calls that believe the time/value for Morse testing has passed.

The ARRL survey indicated that something like 60% of surveyed hams still liked the idea of Morse testing, despite the fact that about 40% ever use Morse anymore (schizophrenic attitude isn't it?). Given that the first number means that 40%, a minority, but certainly much more than a "fringe" element, of hams in fact *don't* like the idea of continuing Morse testing, it seems reasonable to conclude that there are lots of hams with code licenses who don't like the idea of Morse testing. Also I believe that the survey was of ARRL hams, which in fact is a minority of hams, and might well have different statistics than a survey of *all* hams.

Getting back to the point, I, for one, wish to see Morse testing eliminated; believing it should be replaced with improved and more rigorous technical tests, coincident with a more rational license class structure. I think it is silly to make the distinguishing characteristic of our avocation a skill based on aurally decoding an arbitrary code originated in the 19th century to mark paper strips with discontinuous lines, because they didn't have the technology to make electro-mechanical alphabetic printers.

Morse is not a particularly efficent code, nor is it more reliable, nor does it have any error minimizing (let alone correcting) properties, nor does it have any better spectral characteristics, nor SNR enhancing properties, nor is it unique (you knew about the Continental Morse code, and the different "Morse" codes for foreign languages right?), nor is it anyone's native language, nor does it allow you to express yourself more effectively (in fact

almost certainly less - even Internet, with about a 10 year life, has already developed a greater assortment of emoticons, compared to HI HI after 165 years). About all Morse really has going for it is history and an established population of acclimated users.

Use and promote Morse code as a major sport, among the many activities associated with ham radio. But making it the distinguishing feature of radio amateurs makes us look like a chapter of the Society for Creative Anachronism. An enchanting diversion to be sure, but worth gigahertz of public spectrum, surely not.

Source record: 202816

Hell-O....
I am having a problem and any helpful information would be appreciated. Lately, in our home we have been having HF electric problems circulating thru our computers, electronics, Florencent lightings, and home in general. We are expereincing HF pitched noises which irritate both myself and my wife, such as overly sensitive hearing of the frequency, which is very high, almost of range of hearing. The feeling is almost electric through-out the house and most irritating overall. We have a ham with an antenna about 200 feet from our house. He is not very approachable.
What could cause this electronic feedback.... is it dirty power from our underground electric cable/wiring system interacting? A problem from his antenna? Is there a way to find our before approaching him? What kind of test equipment can we use to find out where the problem is? Any answers from any of you would be most appreciated. I have always thought being a ham would fun. . . . . and this is not meant to demean the hobby. I am only looking for a solution to my problem.
Thanks for any help..... Denis

5478. Ballast for tilt-over towers

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-10 00:00:00 UTC
From: hainess@ocean.com.au
Message-ID: <330e6d81.1499617@news.ocean.com.au>
Source record: 202817

Hi,

I have recently erected a 55ft tilt over tower and positioned a 4ele monoband yagi for 20m on top. The tower is a two section telescopic arrangement, and it lowers to approx 35ft before it is tilted. The base the tower is triangle with sides of 17 inches wide.
My problem is that when I tilt the tower, the weight of the antennas is so great that the stress on the tilt winch is too high in my opinion. The winch has a mild steel handle that I have managed to bend due to the cranking force required to raise or lower the tower.

I am considering attatching some sort of clip on frame to the tower base. This frame can then have ballast attatched to it.
I'm not sure how to go about making the ballast, or the frame.
Does anyone have any experience with this situation, please forward me your ideas.

Well, it is we thirty, forty, and fifty year-olds that are running these entrance programs, so don't blame the kids. The kids will do what they have to do to survive, as human beings have done since the beginning of time.

Today's youngsters have computer skills that put the average code-proficient ham to shame. And they learn it for the most part at home, on their own. Not from the crummy public schools that we older generation types have inflicted on them.

They would learn the code if they thought it had value. It does not, so they don't learn it, so they don't join our hobby. We hams are the losers, not they.

Can you guys not get it in your heads that we are in a seller's market, not a buyers' market? Kids don't need ham radio, it is ham radio that needs new blood!

> Ham radio is not the Navy. Where's the relevance?
>

OK, fine, but where's the relevance of Morse Code. We hams do not use it for anything but recreation. OK, nothing wrong with that, but that hardly justifies a code REQUIREMENT.

Morse is never used for disaster communication. It is solely a recreational mode. Since all other services either have, or are about to, abandon Morse, there is no value in our existing as a pool of Morse-proficient operators.

Since Morse lacks relevance or value, it should not be a licensing requirement.

You passed the general. Yippie!!!! Big deal. I got my no-code ticket
so I can get my feet wet while learning the code. Don't knock the
no-coders. Sooner or later, unfortunately, they will outnumber you
and the code will go away. Why make a big deal between the different
classes anyway? Gee, he's black and I'm white so I don't want to talk
to him. It's the same thing. Just because some of us have lives and
will take awhile to learn the code (see, we have jobs and families
that require time AWAY from the radio) don't condemn the whole lot of
us. Assholes like you make this hobby embarassing at times. So
here's some advise - Grow up and get a life and stop bitching about
everything you don't like. Damn, my 4 year old has more restraint
than you.

5485. Pactor Newbie Question

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-11 00:00:00 UTC

Hi and thanks for reading.
I am running an AEA PK-232 and Pakrat for Windows.
The manual says to call CQ in Pactor, just send CQ de callsign, just like oyu would in RTTY, and then listen for a connect.
Problem is, I never hear anyone calling like this.
What I print is stations (calling?) like this:
callsign <C>
callsign <C>
callsign <C>
callsign <C>
callsign <C>
Are these stations waiting for a connect?
There seems to be no provision for doing this in my software.
Maybe I am missing something.
Any help would be appreciated.
Thanks,
Ernie

Whoa, now. Reality check. I seriously doubt the above, having served
as a Captain in the US Army, I think I would have known about any
"Crossbow Battalions."

Crossbows are gone from the Army. Just like smoke signals and Morse
Code. They are all obsolete and of no practical value.

As if packet radio is ruined enough by sysop censorship!

They have pretty much destroyed any current events discussions....
particularly if they weren't "politically correct".

That left only FOR SALE bulletins.

NOW THEY WANT TO CENSOR THOSE!

N8YEL and N3BUS are on a packet campaign to limit the number
of FOR SALE messages by a particular ham.

When does this nonsense stop? When packet is totally destroyed?

I have one thing to say to sysops like N8YEL and N3BUS.....

CENSOR THIS!!!.....(as flammie grabs crotch and makes obscene
gesture.....)

5493. Morse Code Practice WWW Page

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-11 00:00:00 UTC
From: Simon Twigger <simont@post.its.mcw.edu>
Message-ID: <33257F79.4AC5@post.its.mcw.edu>
Source record: 202682

Hi there,

I've recently put a morse code practice page on-line at my Amateur Radio Exam practice site. Currently it will generate random groups of letters, numbers, punctuation/prosigns and words. Alternatively it will also produce random QSOs. You can pick speeds from 5-22wpm using either normal timing of the characters, or using the Farnsworth system.

You will need a browser (or helper application) that can cope with .au sound files. It works fine with Netscape 3.0 and the liveaudio plugin for example, similarly MS Explorer 2+ should work Ok.

I will be expanding this to generate simulated morse exams, using the random QSOs and creating 10 multiple choice questions for users to take.

This page can be reached via:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

If you have a chance to give the morse a try, please let me know how well it works - are the sound files too large/too slow downloading, etc.

The site also provides practice for all the written exams, novice - extra, accessable either on line or even via email.

Well I don't know how the rest of you feel, but I feel ashamed. We are "Ham Radio Operators" this is supposed to be a brother hood. We at least used to encourage new people in our hobbie not stomp on them. I believe in keeping the morse code, but it gives me no right to bash a new ham. I should have been there encouraging him/her.

I remember when I was very young, my grandfather was out of ham radio for years, and my father was interested in getting his license. We were driving home one night and my father saw a tower in someone's back yard and thought they might be a ham. He pulled into the driveway, knocked on the door and an older man answered the door. He invited the whole family into his house, showed us his radios, and encouraged us. He told my parents how to go about getting their ham tickets. He even let me, a very young kid to call "cq" on his radio. I made my very first contact, it was Bogata, Columbia. I don't remember what her call was, but I was hooked on ham radio. I have just recently became a first time elmer, and my first student has a no code license, go figure.

So to all of you new hams, I welcome you to our hobbie. Code or no code. I hope you get as much enjoyment out of it as I have. Again I apologize for any ham bashing I have done.

>generation types have inflicted on them.

When I walk into the computer labs on campus I see the students madly typing away - how impressive! until I look closer - they're on "chat lines" or using "talk" or on email or on the newsgroups; those just staring at their screen, drooling, are looking at some, ummmm, pictures; others are playing various games; others are writing a term paper. Then I ask myself - "Are these the computer savy kids that Roger keeps speaking of, with the computer skills he so admires?"

Now, comparing these computer "skills" to code proficiency is as silly as me saying "Some of today's youngsters have mathematics (or music) skills that put the average law student to shame." Apples and pineapples, Roger.

Yin Lung Shih <ylshih@alumnae.caltech.edu> wrote:

>Recognizing that Morse testing is outdated and inappropriate today

A good number of us don't recognize that. In fact, recognizing that CW is the second most popular mode on HF, I'd like to see skill tests for *all* the popular modes in use today. It's so easy to put out a harmonically-ridden rotten signal for all the world to hear that, like Singapore, our examinees should have to demonstrate skill in operating their radios.

>While you don't need to be able to design and build your own station
>to be a ham, the ability to hook up a 12V battery, jury rig an
>antenna, understand propagation, etc, are relevant to the majority of
>the ARS charter goals.

Uh oh - you're approaching that area where folks then go on to say "... and your mic is dead so you can only send Morse code by keying the PTT..."

>To the extent that all someone wants is to
>DX or contest with a commercially purchased rig and a commercially
>installed tower and beam, then I would say that is a "ham" who is
>not supporting the charter.

You mentioned three of the charter items, but you conveniently left off S97.1(e): "Continuation and extension of the amateur's unique ability to enhance international goodwill."

Now, do we have the privilege to focus on just one area of 97.1, or should we feel obliged to satisfy all five charter items? If we have that option, then don't condemn the DXer. If not, then we all should be DXers (and builders, and RACES/ARES members).

"Commercially installed tower and beam?" I honestly don't know any ham who hires someone to do that - all the big DX guns here in the islands did their own installations.

>To the extent that the ham is constantly
>tinkering with the station and learning how to eke out better
>performance ...

None of the VHF-only folks even remove the back covers of their HTs to see what's inside, Yin. (Oh, that's a lie - I forgot those who ask "What diode do I clip for out-of-band transmit?" [I always send the generic "Cut diode D16" reply.])

I hate to burst your bubble, but most of the builders I encounter are CW ops; one only has to subscribe to the various homebrewers' email lists to see that.

Keep the solder flowing,
Jeff KH2PZ

>any longer. International requirements are vanishing, so will this
>'HOBBY' if this rigidness keeps up. This is my opinion.

Actually, because it's so easy to place a harmonically-ridden rotten
signal on the air and interfere with QSO thousands of miles away,
I believe we should require skill tests for *all* the popular modes
(recognizing that CW is the second most popular mode on HF).

>I wish the ARRL had just left electronics theory in the test so most
>of you appliance operators would be in this hobby!

What's that have to do with code? The most prolific homebuilders I
encounter are CW operators; subscribe to any of the homebrewers'
email lists to see for yourself.

>Amateur Radio: one auction or so away from its demise...

Not the HF/MF bands! And the NTIA has recommended to Congress that
even more HF/MF spectrum be given to us.

>Kill the code or kill the hobby?

Go play on VHF - you have over 97% of the US amateur spectrum up
through 23cm available - no knowledge of code required.

>The time has come...

Heehee - have you been reading old QST magazines? Hams have said those
same words for 80+ years.

> Woody - KA2RAF/4 - I'm the NRA, not the ARRL

Pity - the ARRL is the reason ham radio has been able to survive for
the last 80-some years. The NRA hasn't done squat for amateur radio.

Yin Lung Shih wrote:
>
> <discussion of how changing the emphasis of the ham tests from code to technical will encourage more hams/homebrewers deleted for the sake of brevity>

I'm afraid you have more faith in the human spirit than I. IMO, regardless of how you structure it, if you make it more difficult, you will get the following reactions:

- fewer people willing to try,

- more people complaining about how unnecessary it is to be so difficult/technical.

I put forward my current observations of complaints as evidence (see earlier posts). I believe the problem is as much to do with a less patient society as with anything else. Regardless of how you adjust the balance of the tests (less/more code vs more/less technical), many will still complain about them being too hard and unnecessary.

The only way we'll get more people into the hobby/service/whatever is to make the tests easier. Do we want that? I honestly don't know. On the one hand, there'll be more hams, thus minimizing the chance of band confiscation. On the other hand, we'll have more of a CB mentality, with even less homebrewing. Will the hobby really be worth anything after that?

I think many who cry about the code are just either too lazy
to study, or just not equipped with the tools to learn.
They spend much time being eloquent on the merits of dropping
the code requirement for HF.
I suspect that even if the code requirement was dropped, most of them
would find something else to cry about or to blame for not getting
the upgrades. Hey guys... can you spell CB ?

>fire entrance exams and in a lot of other disciplines.
>
Used to be that if half the kids in high school dropped out, nobody
worried about it, they could get jobs in factories and such. And
the honor students were in the top 10%, and became doctors and stuff
in college. Nowdays, the factory jobs are gone, and the dropouts
can't get jobs better than McDonalds or drug dealers. I'd say that
the country's requirements have gone up. And it makes the education
system look worse, as their "product" hasen't improved to keep pace.

I think it was a bad idea to change the scaling on the SAT tests,
making the old 450 equal the new 500. People will think the schools
got better, "Oh, look, the average went up 50 points".

To get back to ham radio, lets trade in CW for a harder theory test.
say 5wpm and advanced theory gets you a General class license.
You still have standards.

Buzzt. Not true. Yes, the examiner will issue you a document of successful completion, he does not issue you a call sign. You may not operate until you have a valid call sign. Once you know your call sign (found it on the web) you are legal to operate even if you haven't received the paper copy.

5513. Help! Is There A Glossary of Terms?

5514. ARRL Publications

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-11 00:00:00 UTC
From: "Brian K. Short" <ke7gh@primenet.com>
Message-ID: <3325EB14.4A62@primenet.com>
Source record: 202703

I received an advertisement from ARRL today (and I love to receive junk mail, really) and realized that one can spend too much time staring at a tube (monitor). There are many books in the Publcation Catalog that I had never even heard about!

Not counting getting the back issues of QST on CDROM (had to purge/recycle the hard copies some time ago) and the 1997 Handbook (either CD or hard copy as my copies go from 1974 to 1981 to 1987 and a *lot* does happen in the world of ham radio in 10 years), I came up with the following list of interesting offerings:

#5714 Personal Computers in the Ham Shack $15.95
#5854 Getting on Track With APRS $14.95
#3207 W1FB Design Notebook $10
#3851 Hints & Kinks $10
#5617 QRP Power $12
#3657 W1FB QRP Notebook $10
#4319 NOS Intro $23
#4955 Packet SPEED $15

Some seem like remarkable buys, others... Can't judge a book by the cover either (you can quote me). Anyone have specific comments on any of these books?

Where is the least expensive place to order these as the total (if I were to get all of them) is over $110?

Anyone have "used" copies of any of these books for sale?
Anyone want to get rid of the QST or ARRL Handbook CDROMs?

Not that ARRL Publications are such a bad buy, I'm just miserly!

73, Brian ke7gh@primenet.com

Assume by "HF pitched noises" you mean a high pitched whistle or whine?
Do you hear it all the time?
Everywhere in your house
Outside the house?
In the garage?
Does it stop when you shut off power to your house?
Does it stop when you shut off the water and gas lines to the house?
Do you live in the country, suburbs or city?
What part of the country?

Give us more information and perhaps we can help.

etc.

Everyone (including Drew):

Any way we can all get along?

I'm proud of my Extra ticket, too. I put in a fair amount of work to get it. I have rigs for 2m/440 and HF. I use all of them on a near daily basis. I enjoy the hobby of Ham Radio. If you do, too, great. If not, please move on. I'm so sick of hearing small-market deejays with time on their hands try to make waves on ANY medium, much less one that those truly interested in the hobby invest time and effort to keep clean and productive.

The code is a requirement for real HF priviledges. Even under the new ARRL provisions, it will still be required. It's part of the hobby. I learned it and passed my 20 wpm test, too. I now send and receive at over 30 wpm. It's fun. Leave it at that. Please.

I admit I have not followed this thread all the way through, but I have to agree that the code has to go. I have quietly held this view for a long time, so I figure this is as good a time as any to speak up.

Morse code is the 90's equivalent of smoke signals. It's a quaint and interesting skill, but has no longer has any practical value. The fact that it has been abandoned by every other communications entity should tell you something.

We all lament that it's so hard to get young people interested in ham radio, but come on you old buzzards!!! CW IS BORING! How are you going to convince the average 10 year old, who will barely even wait for a

28,800 b.p.s. modem to do its thing, that tippy-tapping dots and dashes at 13 or even 20 w.p.m. is exciting? You're offering them a horse & buggy in a space shuttle world, so it should shock no one that they're not listening.

If we were genuinely interested in perpetuating this hobby, we would dump CW outright and shift focus towards computers, packet, ATV, and satellite communications. See a theme here, ladies & gentlemen?

For the record, I am a ham & got my ticket long before no-code, so I'm not playing sour grapes here.

No biggie. Just my opinion.

Charlie

5521. THE TRUTH ABOUT THE CODE

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-11 00:00:00 UTC
From: "R.F. Gaines" <inova@sowega.net>
Message-ID: <33261E38.44F2@sowega.net>
Source record: 202710

The real reason for the code is something that nobody, including the FCC will ever admit. The code requirement was instituted as a "racial filtering system" to keep blacks and immigrants from participating in the Amateur Radio Service. This was supposed to be the "literacy test" of the radio world and the effect on amateur radio is quite evident today. Less than 1% of all licensed hams today are black. It is time to remove this unfair barrier to full participation in amateur radio. At a time in our history when equality is becoming more prevalent in our society it is shameful to maintain this degrading and humiliating system that promotes racial inequality.

Viking wrote:
>
> With all this difference of opinion on code I am wondering if it is
> technically possible to transmit voice on the frequencies that are now > code only (if FCC allowed it)?

Technically possible - yes. Any mode "can" be used on any frequency (within some limits based on Nyquist's equations, etc - I include this only for the nitpickers out there! ;)). As you point out, legally this is a different matter.

>Since those frequencies are used mainly for DXing
> and reception is not always the best wouldn't a lack of using code on > these frequencies limit the number of DX contacts possible??
>
Using ssb (for example) instead of cw would limit the number of contacts possible because ssb (or am, fm, rtty, etc) has a wider bandwidth than cw, so fewer signals can be accomodated per any given bandwidth. Also, typically, cw can be used to greater advantage under weak signal conditions - i.e., a path that wouldn't support an FM or SSB conversation might support a very usable cw QSO. So, "more" DX contacts could probably be made using cw than any other mode, all other things being equal.

Hope to chat on the air sometime...73!

The question pools are generated by the VEC Question Pool Committee, not
the ARRL. ARRL is a participant on that committee and I can tell you
with certainty, ARRL does not always get its way. :-)

>I would love to see most, NOT all, you extras pass a technical test
>worth something more than outdated 20 wpm CW.

IMHO, things are not a lot differnt, defacto, than in the time when the
FCC conducted exams. Several study guides published the exact FCC
questions and correct answers (notably the infamous Dick Bash guides).
The technical questions of today are perhaps even a bit harder than those
in the "good old days," IMHPO.

>NK2U would have to join the Army, to learn electronic theory not CW!

>Amateur Radio: one auction or so away from its demise...

>To get back to ham radio, lets trade in CW for a harder theory test.
>say 5wpm and advanced theory gets you a General class license.
>You still have standards.

Let me state clearly that I am offering a personal opinion (in most of my posts, actually), not ARRL position:

IMHO, *IF* we are going to have a code requirement (a matter up for debate, I have been told; :-)), it should not be 5 wpm. I have seen a number of people here at HQ who have passed a 5 wpm test, then not used the code. A few years later, they cannot even send their own callsign in code. I have seen some who have passed a 13 wpm test and not used the code. A few years later, they are slow as molasses, but still remember the code. *IF* you are going to have a requirement, it should be one that gives one a permanent skill, not a temporary step to be soon forgotten.

I don't know where to draw the line. It is, IMHO, not at 5 wpm. It could be 13 wpm. Is it 10 wpm (I think so, but that is only a hunch), as is found as part of the ARRL working proposal for restructuring.

Special notice: Southern California members take note--March QST is on its way!

We've received numerous calls from ARRL members in Southern California who never received March QST, and we've been issuing replacement copies upon request while investigating the problem. We discovered that once the magazines had entered the US Postal Service stream, they were put on the wrong train and spent several weeks in a Houston, Texas, postal facility. The magazines are currently on their way to Southern California and should be delivered to the Los Angeles Bulk Mail Center on Friday, March 14. From there they will be dispersed to the intended recipients. Although this occurrence was beyond our control, we apologize for any inconvenience it may have caused.

Chris Broadbent <cfb@bga.com.nospam> wrote:
>This is all very well in theory, but the chances this'll happen are
>low. The tests have been simplified pretty much each time there was a
>change. The cries to remove this 'archaic coding system' are (IMO) made
>mostly by people who want to get onto the HF bands more easily.

Instead of assuming that your worst case scenario will come true, why not be open to change, but work to make sure the change meets your standards. Your fear is that "unqualified" people may end up on the ham bands; my concern is that there won't be *any* ham bands in 10-20 years because the public and regulatory agencies see us as ridiculous anachronists dabbling in a hobby with no relevance to modern technlogy.

>Of course, and that is why I want it to be made stricter. However, the
>majority of new hams don't build their radios, they buy them.

For the older hams I believe that this is partly due to a failure to keep up with new technology. For the newer hams, I believe this is reinforced by the structuring of the code tests. The typical Tech is excited to get his call and then has a few weeks or a few months of learning about his new rig, repeaters, etc. Now he looks around and says to himself, "what do I do next?" He can stay a Tech and experiment in VHF/UHF; but wait, the Tech license didn't do a darn thing to prepare him to understand transmission lines, microstrip, network theory, synthesis, impedance match, Smith charts, parasitic reactances, etc. Instead, what his peers tell him is that the next step is Tech Plus or General, both of which now require him to pass the Morse test. That is the official upgrade path right? There are even hams who will call him a second class ham or not a "real" ham if he doesn't.

At that point, the Tech can try to learn Morse and may hit a wall and quit in frustration, may find it silly and go no further becoming disillusioned, or ideally may get past this stage. It is only after they can pass the Morse test, that many will have the incentive to learn enough theory to do any real homebrewing, roughly about the General/Advanced level. This is the way the tests are structured and it should not surprise us if we get appliance operators until after many hams learn Morse, when that is how it is incentivized. But it would be just as workable an incentive to get hams to progress technically and become homebrewers without the stumbling block of Morse culling out lots of otherwise smart and enthusiastic people first.

>I fear that if they remove the technical components (and
>they are starting to cry for that), the FCC will then require type

>approval of home built equipment. It is, after all, a perfectly logical
>next step, after removing the technical requirement.

Logical only if you allow your fear of lax technical requirements
to become reality. The "quid pro quo" that would be required for
elimination of code tests, would be development of a more rigorous
theory test format and sequence. The one should be made contingent
on the other and both approved simultaneously.

>Here's something for you to ponder: most homebrewers in my circle are
>avid CW fans.

I have pondered it; see my observation above. I have also noted
that most homebrewing is represented by HF/CW/QRP rigs these days.
Comparatively less activity in VHF/UHF/microwave/spread spectrum
(until TAPR this year)/other digital and analog modulation modes; in
other words the frequency regions and methods that are most active
commercially these days attract less of our collective attention and
efforts. Perhaps an argument could be made that technology beyond
CW modulation and HF oscillator/amplifier circuit techniques represents
a "wall" for many homebrewers, just as 10-12 wpm has been identified
as a wall for those learning Morse. This other wall may be a useful
distinguisher of skill level if a true technical license ladder
is ever established. Making this distinction, may mean that we get
more hams working hard to break that barrier and thereby learning
enough to make useful contributions in new areas that can continue
to earn us the right to keep all our bands.

>All those who are not interested in homebrewing their
>own equipment (in my circle) are no-coders. I'm not denigrating
>no-coders, merely making an observation.

Again, I believe our test and license structure tells new Techs
homebrewing is less important than Morse, so we get less of it.

WOW...I'm glad I haven't wasted my time learning the "code" nor wasted my money on any HAM equipment. If this is how you all act on the radio, I don't want any part of it.

I originally got my no-code tech to aid as a service. I am a certified Hazardous Material Emergency Responder. I thought to myself, wow, this HAM radio would be a great way to do a community service. I travel quite a bit, to me a radio would be an excellent tool in the event of a crisis (i.e., tanker truck spill). A common bond between others would allow reliable communication.

I can recall nearlu 20 years ago, listening to my uncle power a HAM shack and talking with people throughout the country on it. I thought that was what HAM radio was all about. Instead on this newsgroup, magazines, anything about HAM radio, I see the fussing and bickering about "low-lifes", "code vs no-code", and more worthless bickering.

Have fun with your bickering..ummm, your hobby. It's a crying shame that something that could serve a community so much has been reduced to such apathy.

When I first got my no-code tech, I made several posts asking for ideas and advice...instead I got the usual "learn the code" and other similiar statements. Whatever happened to assistance and encouragement?

Whatever happened to community service?

Is there anyway to give back my license?

Hey guys...

I guess the check is in the mail???? I keep looking, but somehow it's not arrived yet! Amateur Radio is defined as a "service" merely as a point of law. It was in it's beginning and still is now a technical hobby. True it has been a valuable resource for trained operators during times of war in by-gone-years (when knowlege of code was essential) to the military. As a HAM myself... I take pride in that. But as a past professional radio tech I also know that the skills once possesed by the majority of hams is past away "literally speaking". Let's face it... We will be lucky if we can be successful to keep our frequencies in the future. My recent mailings from the A.R.R.L. is proof of the threat we now face from commercial and other interests. Let us all band together to preserve Amateur Radio from any of it's threats - commercial and otherwise.

ANNOUNCEMENT
Shortwave & Radio Catalog
of Hypermedia Links
http://itre.ncsu.edu/radio

Shortwave / Radio Hypertext Catalog on the World Wide Web (WWW)
serving the radio enthusiasts since March, 1994

AVAILABLE ON-LINE NOW
ISSUE #51
Now 12 pages

A new on-line catalog of hypertext links to FTP, GOPHER, and WWW
files and
services for the Shortwave Listener and Radio enthusiast is now on-line.
This
issue includes links to broadcaster schedules, digital audio files,
graphics,
mediumwave, shortwave, FM, Ham Radio, FCC, and other files associated
with
radio.

Over 1500 hypertext links (and still growing) are listed. These
include
direct links to Shortwave, AM, and FM broadcasters, Solar reports and
images,
Scanner information files, audio files, internet broadcasting, ham radio
info,
radio reviews, info for the novice and much more. All these available
with a
click of your mouse via Netscape, Internet Explorer, or whatever browser
(return key for NCSA lynx users), and the catalog is searchable!

The URL to put in your hotlist/bookmark file or Home Page:

http://itre.ncsu.edu/radio/

>things.

You have misstated the argument. I (we) are not saying to anyone that they SHOULD spend time learning other modes and not learn CW. We don't want anyone to be denied the opportunity to learn and use CW if they want to. We are opposed to forcing all hams to learn CW as an entrance requirement to the amateur HF spectrum.

>and/or filling out checks, how much writing do we do
>anymore?!

I never write anymore. It bothers me not at all.

>Look at the schools .... in many (most?) places, school kids
>can now do their homework using a computer OR by hand. Since
>a computer is easier/faster .... that is often the preferred
>mode.

I learned to type first because I hated writing and got better grades because I didn't have to deal with losing points for penmanship.

>So.... ever take a look at the handwriting/penmanship
>of our kids (or ourselves)?? It's AWFUL! Add to that, because
>of our laziness in using spell-checkers, we find too many cases
>of bad spelling (their/there/they're, etc).

Actually, use of spell checkers reinforces correct spelling.

>Also ... I think
>it could be said that in many cases, there is not as much clear
>thinking that goes into something written while using a computer
>as doing it by hand .... yes it IS slower ... but it DOES force
>the writer to spend a bit more time thinking about what he's
>writing.

That is surely a personal opinion only.

>I hadn't read of anyone making the comparison (if there really
>is one) between the dying off of CW and that of legible hand-
>writing.

There isn't any. Two different skills, neither of which is
required in the 21t century.

Source record: 202575

The CODE MUST Survive! QRPers can easily build
CW rigs. We can communicate further and with less
power with narrowband comms. Also I respect code
operators immensely -- I've never herd them send
Uh,,, Uh,,, Yeah.... and those other utterrances
you hear on the 2M band.

It also is part of understanding communications.
Reading Teletype Tape, Understanding differrent
signal types. Ham Radio isn't just about you and
I chewin' the fat. We have access to communications
media and must all strive to become knowledgeable in
all facets of it.

The perception that HAM operators are knowledgeable
on ALL forms of communications is one that we should
emminate. That's what it's all about. Learning by
doing. Walk before run. Building an antenna -vs-
storebought. We know about the binary codes in computers.

We should be proficient in the binary code for Radio
Wave Communications.

OK, try as I might, I cannot imagine what could be considered wrong/dangerous/evil/otherwise_undesirable about doing an Ionospheric radio propagation experiment. I am not going to buy or even read a book on the basis of your above cryptic urging, unless you provide more information.

The style of your post makes me think that either the book is pushing kook pseudoscience and you are embarrased to say, or is pushing some political agenda and you don't want to show your hand. Perhaps I am being too cynical. To paraphrase a well known actor, "show me the information".

5557. Admiral Casey and his Bathtub Brigade

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-12 00:00:00 UTC
From: mnmaniac@aol.com
Message-ID: <19970312234100.SAA26206@ladder01.news.aol.com>
Source record: 202579

For those who might have thought I was joking about our friend Casey's strange proclivity for bathtime boating and/or his being rejected for membership by the Stump-Jumpers on 3894.5, here is an excerpt from an actual e-mail which I received from one of the members. The author's identity will remain undisclosed at his request, but the text of his message remains intact. Here's what he had to say about the good Admiral:

>>This idiot, CASEY, N4GKS has no room to be calling anybody a geek. So...
just because he deserves it... I'm gonna let out a little secret: You know these same guys that Casey likes to deride and throw names at... well, guess what? Not three months ago he applied for membership in the ARG and was flatly rejected as a STUMP-JUMPER. And the keeper of the list Bill, W4WKS, has all the documentation to prove that he applied and was rejected. What you are hearing now is a classical case of 'Sour Grapes'. He couldn't get in and now he has his panties in a wad. Isn't that too bad?

Bill, W4WKS, thumbed Casey out right at the get-go. But, to be fair, we did circulate his application to the membership for comment. Here are some of the comments that I saved:

"Hardcore QRMer and Jammer. Not really a ham."

"Consummate wanna-be"

"Wilkie suck-up"

"Porkbutt suck-up"

"Intellectually unqualified. Terminally Incoherent."

"A babbler"

"Incapable of rational conversation"

"I've been to his house. He plays with plastic freakin' submarines in his bathtub"

"If he gets in, I'm quitting"

I think the last comment says it all. And I dare Casey to deny that he applied and was rejected because we have (as PORKBUTT likes to say) THE HARD COPY. Ho Ho.

Oh... before I forget... the fool didn't "decide to leave HF"... the Stump-Jumpers ran his rag-tag ass off of HF. And he better not contemplate any return performances. Geez... the nerve of this DNA

challenged Alabama dirt bag. He had better stick to his bathtub flotilla of plastic submarines... and leave HF and the Stump-Jumpers alone.

Look at this E-mail address... Captain Casey to the bridge.. "OOH GAH... OOH GAH"
Jap Zeros off the starboard bow... "DIVE DIVE"... (And there is his xyl with a plastic airplane in each hand... making machine gun noises over the bathtub)

And this guy has the NERVE to call you a geek? Not while I'm watching.

BTW... W4WKS probably saved the rejection letter that was sent to CASEY... should you need a copy.<<

Kind of says it all, doesn't it?

5558. SSTV with AEA PK-900?

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-12 00:00:00 UTC
From: kharker@cs.utexas.edu
Message-ID: <kharker-1203971813370001@slip-111-18.ots.utexas.edu>
Source record: 202580
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Has anyone out there done SSTV using the AEA PK-900's "analog" mode? According to the PK-900 manual, this should be possible, but the details about how it's done boils down to, essentially, "let the software handle everything." I've scoured the prominent shareware SSTV software without the least mention of the PK-900 or PK-232 or any hint of how to substitute the homebrew interface they all mention with the PK-900. Now, I suppose I could just go out and spend the $30 or so to build the interface and a new cable, but I'd also need a new serial port card, I'd be swapping cables, etc. and it would be just all-around more elegant to use the hardware that's already there...

If anyone has any specific information or pointers to information, I'd appreciate it.

It was a good hobby until trash like Drew came along with notions of
taking the code away so he and his CB good buddies can bring in roger
beeps and echo boxes. I'll make this vow. When the code dies, they can
have my license because the amateur bands sure won't be worth a damn.
I loved ham radio until the garbage creeping from up under the 27 MHZ
rock came to town. Anyone who thinks I lie should go listen to channel
19 in ANY city. Nothing but cursing, echo boxes, roger beeps and
people making threats to one another. Behold the future of ham radio.
Listen to 3.894.5 or 3.950. The beginning of the end.

>
> --
> Michael Cooper
> mikecooper@ti.comThis is very interesting. My 90 Ford ranger had the same problem. When I asked what to do at the service department they said it can't be fixed, but it has been corrected on newer Fords....So I just hooked up my radio in my new (new to me) Ford f-F150 and guess what????
The fuel pump is loud and clear.
So back to the service department and lo and behold I can purchase the rfi filter to put INSIDE the gas tank (which one) any so it goes...

I'll be watching for a solution if antone know of any other way.

He most likely needs exactly what he requested. The HT-800 is a
Euro-Motorola, and sold, encountered to a degree, in South America. It is
like a 16 ch HT-600, no scan. DO NOT use MT-1000 or HT-600 on it, it will
read, but the codeplug will become corrupt. Try a Motorola shop that does
export work. A few shops in Miami, have it, I know.

I do not have it, I have NO RSS, my cat told me ALL of this, so take that
in to consideration.

How does the code requirement promote racial inequality? Are you
implying
that blacks are not as smart and, thus, cannot learn Morse Code? I know
many blacks, and other ethnic members, who would disagree with you. If
you are having a problem learning the code, admit it. Don't try to turn
this into a race issue. Race has nothing to do with one's ability to
learn Morse code. On the other hand, desire has everything to do with
it.

Let's keep one thing in mind, people are people, no matter what color
thier skin is or what country they come from. Don't judge someone's
ability by their ethnic backround. If you must judge someone, let it be
by their accomplishments.

Ummm, well to me, CW is enjoyable but handwriting letters is not. Besides no one can read my writing so I am forced to use my computer.

We all know the story of the above crybaby who wants to kill the code because he's too stupid and lazy to study. I'l bet he runs a roger beep and echo box on his two meter rig. This is the future of ham radio folks. A sad death to a beloved hobby.

>I'm so sick of hearing small-market deejays
>with time on their hands try to make waves on ANY medium

If that was comment was directed towards me, I'm afraid you're mistaken.

Arbitron rates Orlando, Florida as the 38th largest radio market in the
United States. Also the seventh fastest-growing radio market in the
United States. That's hardly "small-market" by any stretch of the
imagination.

You're welcome.

>what HAM radio was all about. Instead on this newsgroup, magazines,
>anything about HAM radio, I see the fussing and bickering about
>"low-lifes", "code vs no-code", and more worthless bickering.

You're confusing ham radio with the newsgroups. You can go into practically
any newsgroup and see arguments; check out the chess politics group - there
might be heated debates in that group, but you never see that type of
behavior between two people playing a game of chess.

>Have fun with your bickering..ummm, your hobby. It's a crying shame that

>The code is a requirement for real HF priviledges.

When the only remaining reason for having a requirement is because "it's the rules", it's time to change the rules.

> Even under the new ARRL provisions, it will still be required.

Since when does the ARRL dictate the provisions by which the government sets the requirements for obtaining a radio license? Again, the ARRL does NOT represent even a simple majority of licensed amateurs. Their proposals are simply that...proposals.

>It's part of the hobby. I learned it and passed my 20 wpm test, too.

More of the old "I had to do it, so you should, too" argument. When you learned it, Morse was a relevant skill for obtaining an amateur license. This is no longer the case. The government no longer has a compelling interest in requiring knowledge of it.

>I now send and receive at over 30 wpm.

Not a compelling reason for the government to require Morse knowledge for issuance of a radio license.

> It's fun.

>is progressive, vital and dynamic?

You're free to be as progressive as you desire! So many great modes to play with. With some studying, you might even invent a new mode! Isn't ham radio great?

>not try looking in the mirror and asking "why don't I use CW for my
>e-mail instead of juno.com.

We also don't use SSB (nor the 2m rptrs that you live and yack on!) for email.

>You need to get into the 90's where CW is NOT state of the art!
>It should not be a requirement henceforth!

Actually, the fact that CW is the second-most popular mode on HF certainly qualifies that it be tested for. I believe we should incorporate skill testing for all the popular modes, not just code.

> Woody - KA2RAF/4 - I'm the NRA, not the ARRL

Without the ARRL ham radio wouldn't exist today - the NRA can't make that claim.

>after that?

I'll try to be brief in this one. You again assume that the only
outcome of reducing/eliminating Morse testing is a relaxation of *all*
test standards. I disagree.

More important, the point *isn't* to get more hams. The point is to
get "enough" hams who will do "enough" useful with the bands that our
continued occupation of them is justified. If only 10% of the current
population of 600,000 hams are actively enhancing their technical
knowledge under the current system; but 20% of 450,000 hams would do
so under a restructured system, then in fact there would be a net gain
of 30,000 technically active hams. I don't know what the numbers and
percentages would really be, no one could; but I would prefer that
kind of outcome over the current situation. Changing the incentives
so that they are more likely to get us more technically active hams
would be better for amateur radio than retaining a siege mentality.

>Yin Lung Shih <ylshih@alumnae.caltech.edu> wrote:
>>Recognizing that Morse testing is outdated and inappropriate today

>A good number of us don't recognize that.

Please don't quote out of context. The full sentence was:

"Recognizing that Morse testing is outdated and inappropriate today
is not in itself giving in to the call for reduced testing standards."

It was not a statement, it was a proposition that believing that
Morse testing was outdated did not mean that you also had to believe
in reducing testing standards.

In any case, my original posting was that a 60/40 split in opinion
among hams about the utility of Morse testing today, meant that a
previous poster was unjustified in implying that being against
Morse testing meant that the person was unable/unwilling to learn
Morse. Since I was aware of the 60/40 split, I must also have been
aware that there were many who did not accept the premise about the
outdatedness of Morse testing. But that was not the point of the
proposition above.

>Uh oh - you're approaching that area where folks then go on to say
>"... and your mic is dead so you can only send Morse code by keying the
>PTT..."

That's the kind of thing that happens to a ham who isn't prepared.
Prepared hams have a much greater (not 100%, but almost) chance of
maintaining communications in a preferred mode. I'm a private
pilot, and the chances that I will ever be reduced to Morse keying
of the PTT are so small, that if I didn't know Morse, I wouldn't learn
Morse for that fantasy scenario. My panel has two radios, I have a
backup radio on its own battery, I have a ham HT on its own battery,
I carry alkaline battery cases for both and 20 packs of AA's, and
there is always the ELT on its own battery. Hams who approached
their emergency comm function in the same way would never have to
deal with the "when all else fails, I can touch two wires together"
strawman.

>You mentioned three of the charter items, but you conveniently
>left off S97.1(e): "Continuation and extension of the amateur's
>unique ability to enhance international goodwill."

>Now, do we have the privilege to focus on just one area of 97.1,
>or should we feel obliged to satisfy all five charter items?
>If we have that option, then don't condemn the DXer. If not,
>then we all should be DXers (and builders, and RACES/ARES
>members).

I left it off because I don't consider it relevant to the issue of Morse testing. "International goodwill" is enhanced by communications of a substantive nature including the ability to convey emotion and expression. Voice is better at this, but it does require that the two parties share some common language. But that function is not served by Morse either if the two parties don't share a common alphabetic language, as Q signals and prosigns only allow for the most perfunctory exchanges. The idea that Morse uniquely fulfills the function of an international language and so especially fulfills the "goodwill" goal is silly.

I'm not sure why you think I am bashing DXers. My statement was anti-hams-who-bought-commercial-and-chose-not-to-learn-nor-improve-their-skills. But specifically with regard to DX'ing and the "international goodwill" goal; the idea that a formula exchange of RST and callsign with a foreign station that is turning over a station every 5 seconds or an exchange with a station on a previously uninhabited island occupied temporarily for a week does anything useful for "international goodwill" is silly. These are things hams do for their *own* sport; which is fine, until we forget that those activities aren't the reasons why the bands were chartered for our use.

>"Commercially installed tower and beam?" I honestly don't know
>any ham who hires someone to do that - all the big DX guns here
>in the islands did their own installations.

I'm aware of someone in that business here in Socal, so he must get enough calls to make it worth his while. But what's your beef? My point is that someone who buys everything and does nothing, other than yack, isn't much of a ham, do you disagree?

>None of the VHF-only folks even remove the back covers of their
>HTs to see what's inside, Yin. (Oh, that's a lie - I forgot those
>who ask "What diode do I clip for out-of-band transmit?" [I always
>send the generic "Cut diode D16" reply.])

What's your beef, Jeff? I'm talking about hams that work to improve their skills versus those that don't. I said nothing in this context about "VHF-only" hams. BTW, there are lots of General/Advanced/Extra folks on the VHF (weak signal) list that might be a bit offended by your comment. I think you meant to demean no-code Techs, I gather you don't mind if they are offended, despite the obvious falseness of your generality. If you'd like a counterexample which proves the lie, I can provide at least ten; the ten no-code Techs that are in my homebrewing workshop I've been giving for the last 4 weeks, with

4 more weeks to go, that have been building their own radios.

>I hate to burst your bubble, but most of the builders I encounter
>are CW ops; one only has to subscribe to the various homebrewers'
>email lists to see that.

Sorry to waste your punchline, as I've already disproved it in the
last paragraph. In any case, I'm also on the QRP-L list as well
as VHF list, so your implication that I'm not familiar with those
is wrong too.

I assert that the preponderance of Morse activity on the two lists
I am familiar with has more to do with the relationship that active
homebrewers use Morse because a higher grade ham is more likely to
be a homebrewer (you don't know enough radio technology to do any
serious homebrewing till you can pass General/Advanced theory tests)
and higher grade hams know Morse because that has been part of the
baggage of moving up in grade historically. Sounds self-fulfilling
doesn't it - or are you really trying to argue that there is a causal
relation between Morse testing and being a homebrewer?

The use of Morse also has to do with some of the artificial rules
about what is considered "sporting". For example, QRP'ers that have
given up 13 or more dB to meet the definition of QRP are loathe to
give up another few dB in the difference between CW and SSB. Again
rules that we impose on ourselves that have no relevance outside our
"culture".

Maybe we'll be able to upload our ages to the QRZ web page, just like
we can our email addresses. I've decided to be 39.

This has to be the biggest load of horse manure I've seen in a long time.
CW is a leveller, just like rtty and the digital modes. When you have a
contact you don't know whether the person on the other end is young, old,
black, white, male or female. Its total equality, pure and simple. All I
know when I begin a CW qso is that the person on the other end is
interested in radio, period. And isn't that what it is all about?
Are you interested in radio and the technical aspect of how it works or do
you just want to get on the radio and expound your philosophies? Do you
while about "racial inequality on the repeater? Why are you interested in
ham radio in the first place?

Why is it that some people want to lower the standards because they
are too lazy to do what others did and then blame it on "inequality"?
If you want equality then you have to learn what "equal" means - including
no special privileges or considerations - the same as everyone else!!!!!

You want the privileges - earn them, just as I did! I worked hard and
long to pass the Extra Class exams and cannot have any respect for those
who want to enjoy the same privileges without an equal amount of effort!
Race has absolutely nothing to do with this issue!

Geez! Where do they come from?????

What you are hearing is a station calling another station.. For
instance if I were calling W1AW and you were in listen mode you would
see W1Aw<C> on your screen.
To call CQ you use the FEC mode and you would send CQ much like you
would in CW mode.

Well, I don't know about "political correctness", but I'm sick and tried of seeing tirade after tirade of a political nature on BBS systems, period.

:>That left only FOR SALE bulletins.
:>
:>NOW THEY WANT TO CENSOR THOSE!

Something that's LONG overdue, as well. I don't give a rat's ass about someone selling a linear on the west coast (I'm on the east coast). It'll probably cost more to ship the stupid thing than it's worth.

If you have that much for sale, I'd suggest an ad in Amateur Radio Trader, QST, CQ, 73, or any of the other mags.

:>When does this nonsense stop? When packet is totally destroyed?

I ask that question each and every time I'm on a packet BBS. When WILL the BS and crapola stop? All it does is clog up an already overloaded and antiquated packet system in the first place. Shame on BBS ops for not properly filtering this crap out BEFORE they pass it on down the line.

<infantile gestures deleted>

Seems you have an axe to grind. I suggest you take it up with the ops in question. It's THEIR system you're using, not yours. You don't have a right to tell them what they can and can't do with THEIR equipment, unless it's a club station. In that case, petition the club for a change. If that doesn't work, learn to live with it.

You'll get no sympathy from me. I believe there's too much BS on the network in the first place. Anything that limits the "fluff", I'm all for. I say good for them.

Just another opinion. And you know what they say about opinions...

"I do have a cause. It is obsenity.....I'm for it."

Now THIS is the best chance I've seen yet for removal of the Morse hazing ritual. Not because it's the most logical, but because it stands the best chance of suceeding. Yeah, that's it...the code DISCRIMINATES against BLACKS; the ARRL is RACIST for supporting continued mandatory CW testing; it violates the CIVIL RIGHTS of blacks to demand they take WHITEY'S code test, etc.

Get the uh...Reverenddd Jacsonnnnn and his buddy Kweisi Mfume on the case. They'll organize some protest marches, threaten to extort millions from the ARRL unless it "accomodates their wishes", and the Morse requirement will crumble faster than you can say "_._ _._ _._ "

(See, Beepers. He really DOES know code!)

CQ is called in Pactor FEC mode in the normal manner (CQ DE AA4PB). You call CQ in FEC, someone answers you with the ARQ connect request.

What you are seeing is most likely connect requests to a specific station. Perhaps someone answering a CQ or attempting a connect to a BBS station.

Bob, I assume you are a totally honest, nice, wonderful, upstanding ham.
And I'm sure that 35 bucks for a $240 relay is a good deal. But your
for sale ad makes me think about what seems to be a common problem
in the wonderful world of ham radio used stuff for sale.

Seems like every day I seem packet mail addressed to RIPOFF@ALLUS
or some other similar address complaining about 'so and so sold me such
and such and it's junk' or 'I sent KAxxxxx a check and he didn't send me
anything'.

I can understand your 'terms', postal money order. You want your money
up front. You don't want to send your relays half way across the U.S. to
someone you don't know with the hopes that he will pay you for them.

But from a buyers perspective, your terms don't look so great. I have to
send you a postal money order, which cannot be canceled, and probably
can't be traced to the person who cashes it, and hope you send me some
relays. Granted, 35 bucks is not a lot of money. But I see the same type
of adds for radios and amplifiers 'First certified check' gets it or 'send me
a postal money order for $1000 and I'll mail it to you'. I don't mail money
orders or cash or certified checks to people I don't know, and I am sure
there are a few other perspective buyers for your relays who don't either.

Let's assume for a minute that you are not the nice, honest, upstanding
ham which I am sure you are. What recourse do I have if you cash my
postal money order and don't send me anything ? What recourse do I
have if you cash my postal money order and send me the relays, but
they get lost in the mail and you didn't send them insured ? None. What
if 20 people send you postal money orders and you cash all 20 of them

and don't send anybody any relays ? All 20 of us could trash up
the packet network a little more by sending RIPOFF@ALLUS messages,
but that doesn't solve the problem.

For the benefit of new hams, and for the benefit of old hams who don't live
near a post office or have never been to one, I would like to suggest a little
better system for transacting 'deals' that offers protection for both the buyer
and the seller.

1. You take the relays to the post office, and send them to me COD, INSURED.
Yep, it costs $1.60 to insure the relays for 100 bucks, and it costs $4.50 for
the COD to get the post office to collect your money. But what's an extra 6
bucks amongst friends ?

2. The post office delivers the box with the relays in it to me, but they won't
give it to me until I pay for it. Unfortunatly, I can't open the box and take
out the relays and see if they work before I pay for them, so I give the post
office a personal check, which they in turn will send to you.

At this point I am assured I received something in a box, and you are assured
you will receive some form of payment.

If I open the box and the relays work fine, we all live happily ever after. If
I open the box and find it contains a bag of sand, I have 2 or 3 days to stop
payment on the check I sent you. If I open the box and find the relays aren't
what I expected, I have 2 or 3 days to talk to you about resolving the problem
before I stop payment on the check.

If the relays work fine, and the check bounces, then I would hope you would
have some sort of recourse against me for sending you a bad check. Maybe
the post office would even get involved, I don't know.

I haven't seen too many messages about getting ripped off by a buyer, but
I guess anything is possible. Granted, the above system isn't perfect and I
am sure somebody will figure out a way to beat it, but in my opinion, it sure
beats the 'mail the money and hope' system. Unfortunatly, because of a few
con artists who are hams, probably a lot of people who want used gear are
not buying it when they see it advertised on the internet in packet messages.
Anyway, something to think about besides who has to take a code test and
who doesn't.

Best story I ever heard about getting ripped of was about a guy who wire
transferred $1500 dollars to an offshore bank account in Belize to pay for
some memory simms which, of course, he never receieved. I know it was
a true story, because the guy who sent the $1500 dollars was so upset
about it that he put a web page on the internet to tell the world about it.
Should have been http://worlds.biggest.dummy.com ....

Paul,

I gather that the engine is gasoline (petrol over here) - is that
correct?

Yes noise from an engine most certainly can enter via the antenna!

You didn't say whether the noise was ignition noise of whether it is a
white noise.
Alternators can make a racket with diodes commutating etc.

Have you grounded the back end of the exhaust to the chassis?

I gather you have put earth straps around the rubber shock mounts - but
you didn't
mention grounding the hood!

Have you grounded the engine to the sub/chassis and to the bed?

Well said, Charlie! Now get ready to duck when the pro-coders hurl
insults, flames, and all sorts of vilifications at you.

Please don't give up, though ... keep voicing your opinion and try to
corner your local CW olde fartz and convince them ... you'll fail to reach
most, because they're incapable of flexibility and rational thinking on
the subject, but occasionally you'll gain a convert and that's worth the
effort.

From: Frank Krozel <frankeia@netcom.industry.net>
Message-ID: <3326EEC1.47F@netcom.industry.net>
Source record: 202656

Some of the guys here in the Chicago area were talking on 2 meters about the possiblity of Icom repairing the "Noisy Fan Problem", by replacing a thermistor where a resistor was, mainly to quiet the fan for us Icom fans (no pun intended) on the receive side. The circuit remains the same on tx, or hi fan on tx. Something about we pay for shipping to Icom, and they pick up the shipping back to us. Seems like a great way to help all of us who bought unseen technology. I would have called this morning to confirm this, but it is still early on the West coast. Has anyone else heard of this????
Frank.

Wrong. Just reciently one of those lone sailor types who try to sail around the world had to send an SOS by CW as it was all he had. He was resqued. Hell if all else fails you can short two wired together and send spark gap SOS, someone will hear it.

Since we are mandated to preform public services, espicially in the event of an emergency we should be prepaired for all possibilities. I do believe that 5WPM will fulfill the requirement, I see no real need to require a higher WMP proficiency.

>
>Since Morse lacks relevance or value, it should not be a licensing
>requirement.

In your humble opinion. But that doesn't mean your statement is true. I can state a case for it's still having a real value. However as I have said before I feel that 5 WPM should be enough to fulfill any licensing requirement.

>hmrosser@csranet.com

Just like there are Jerks on CB there are Jerks that can do 13WPM or higher. How do you explain that? I just don't understand why learning code doesn't automatically make for a more polite Ham. Musbe the same as passing laws don't stop the crime.

Me, I just don't like code , but I like to talk to other Hams on the radio. Besides my spelling is bad enough, can you immagine what it would be like in code? It boggels the mind.

Not a very reasonable arguement. It seems to follow the recent arguements
that (Lets see if I can remember them all..) the SAT, ACT, Stanford-Binet
(I.Q. test), um...high school proficiency tests, etc. are racially biased. I
dont see how someone can claim bias on ANY of these tests let alone Morse
Code! Lets see if I can make an anologous arguement...ok...I'm a psychology
major...I cant pass the Quantum Physics tests...they must
discriminate against psych majors!! I know, thats a little absurd but isnt
it a bit similar. It may be true that statistically not many blacks are
licensed amateurs but there are other reasons which contribute to these
statistics rather than morse code. (Statistically, where do most blacks
live - -City.) I believe that most blacks are not exposed to amateur radio
and therefore have no interest. By the way, where do they get the stats. on
the race of ham operators? I dont remember a race box on the 610?

5614. CW? Heck, eliminate handwriting!

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-12 00:00:00 UTC
From: slay@netcom.com
Message-ID: <slayE6xxwy.AE8@netcom.com>
Source record: 202662

Much has been written about whether or not CW is still "relevant" to the amateur radio service, what with all the new digital modes and computers available.

The argument goes that CW is anachronistic and we should all spend our time learning other more modern and useful things. Never mind the counter-argument that the easier it is to become a ham (or attain any goal) the easier it is to quit or give it up. We ARE seeing that.

Handwriting - who among us has actually hand-written a letter in the past year? Other than signing our names and/or filling out checks, how much writing do we do anymore?!

Look at the schools .... in many (most?) places, school kids can now do their homework using a computer OR by hand. Since a computer is easier/faster .... that is often the preferred mode. So.... ever take a look at the handwriting/penmanship of our kids (or ourselves)?? It's AWFUL! Add to that, because of our laziness in using spell-checkers, we find too many cases of bad spelling (their/there/they're, etc). Also ... I think it could be said that in many cases, there is not as much clear thinking that goes into something written while using a computer as doing it by hand .... yes it IS slower ... but it DOES force the writer to spend a bit more time thinking about what he's writing.

I hadn't read of anyone making the comparison (if there really is one) between the dying off of CW and that of legible hand-writing.

Comments?

Morse Code... Computers Code... Since your on a computer, you should know binary code! If your do not, then your a dumb - lazy person who thinks you have some sort of right to be on a computer network just because you own a computer system! I do hope you can read this code faster then five words per minute. If not, get off your computer, since your a lazy person!

[Inline base64-encoded payload not displayed]

If FCC required you to know this before getting on the Internet, who many people do you think would be able to pass? How many Hams would be able to pass if they had to be able to read this stream? This is current tech., not an old telegraph pole tech.

Can you pass this test? Are you stuck in the 19th centry, or moving towards the 21 centry.

It's actually much more than 90 days.

A newly upgraded amateur may operate temporarily using the privileges of the new license class earned at an examination as indicated on the Certificate of Successfull completion of Examination (CSCE) for up to 365 days (aka 1 year) from the date indicated on the CSCE, as issued by the VE team.

A typical license will be processed by the VE team and by a VEC, and will appear on the internet/Web call sign look up pages, usually within 10 days of the test date. The hardcopy license would follow after that FCC processing date in 7-10 days by mail.

Hhmmm...

This seems to remind me of the single-side-band versus A.M. arguements of years ago. Or, even further back, C.W. versus the Spark Gap???? If we are unable or unwilling to experiment with new technologies... perhaps it may indicate that ham radio as a whole is no longer a technical hobby and the future for it is nothing more than that of a "Rich Man's C.B.", which now appears to be the case for two meters in large metropolitan areas.

> Any info would be helpful.
> ..Sandra, I recall reading something about that, and(this is from
memory and may not be entirely accurate).. It seems that during
those days, most radio operators on ships were contracted by the
Marconi company ,like a union. The marconi operators were instructed
to not communicate with non-marconi operators. The Titanic had a
non-marconi radio operator. Another ship was within 6 miles of the
TItanic when it sank, but union politics prevented communications.
In ham radio "CQ" (like seek-you)
is a call for anyone to respond..so (this is only
an educated guess) I GUESS "CQD" added the "D" for a distress situation.
The Titanic had an enormous impact on the radio world, one of which
was the standardizing of "SOS" as the universal morse code distress call.
... and later "MAYDAY" (from the french "m'aider") became the universal
verbal radio call.
hope I was of some help.. But you may want to research for technical
accuracy..

Just kidding about the guy's brain :-)... actually, I can see how he
could be fooled... there's a really unusual intermittent pattern to
the noise that DOES sound somewhat like morse code. I've heard that
ugly 60Hz buzz before though, it's definitely common
noise/interference.

> N2OJQ

Hello Ernie Pactor FEC mode is used for calling CQ. I don't use the Windows version of Pakratt but the DOS version. Not sure if you function keys are the same but in the DOS version its the F3 key for FEC (or Broadcast Mode).Fro example, I would hit the F3 key and then start typing CQ CQ CQ..... an so on. Once finished with the CQ, go to stand by.

To answer a CQ, find a station calling and then use the ARQ mode to start a linkup with them. For example, you see WZ0XXX calling CQ. Hit the (in the DOS version that is) F4 key and type the call sign of the station you copied and press enter. It should start trying to connect to the other station in ARQ (Error correcting) mode. after you finish the QSO, hit whatever key puts you into standby mode.

Anytime you see something like:
callsign <C>
callsign <C>
callsign <C>

it means that the station you are hearing is trying to connect to "callsign" in the ARQ mode. And that's all there is to it. Just takes a little practice is all and you'll get the hang of it pretty quick.

I currently have for sale a very clean copy of "Ham Radio Incentive Licensing Guide", by Bert Simon, published in 1973. The 160 page book has card covers, and is clean with no page tears or pen marks. It describes the FCCs 1967 Incentive Licensing Rule, and also was an exam study guide for the various types of licenses. The book is available for $5 (postage included within the US). If interested, please email to "dcleaves@geocities.com" for additional info. Thanks, and best regards.

Dave

5638. *** 8 MILLION E-MAIL ADDRESSES ***

********** MAKE MONEY ON-LINE NOW! **********

********* 8 MILLION E-MAIL ADDRERSSES! *********

==========
You are not included in this database you were randomly selected to
receive this message. Because our sources have indicated that you may
have interest in this product. There is no need to reply to be removed
because this is a "ONE-TIME MESSAGE". You will receive no further
mailings from us.
==========

**** Please Print This Message For Future Reference ****

* If you are Serious about Making Money On-Line read this message in it's
entirety. Let's Begin......

Have you ever wanted to market on-line? If so, this is for you. Let me tell you a
little about ourselves. We established our business in 1995. After marketing over
20 products very successfully on-line, we are releasing the Biggest Secret to
On-Line Marketing. Every minute of the day 7 new people log on-line. That's
10,080 people per day! Is that unbelievable or what? Do you know what that
means? That's 10,080 new business prospects per day! There are over 65
MILLION prospects waiting for you right now! By the end of the year there is
expected to be over 95 MILLION people on-line! As you can simply tell, there
is no end to this. Let's face it. There are many large companies investing
MILLIONS of dollars per day on the Internet, and for one reason only. They
know this is where their business is going to be by the year 2000. Marketing
On-Line can be a very difficult task, but it doesn't have to be. That's where
we come in. We have put together an unbelievable marketing package
together for you that nobody can even come close to.

Don't be fooled by these people telling you that you need Floodgate and
other similar programs to send bulk mail- it's a lie. Floodgate only extracts the
addresses. That can be VERY time consuming and costly. They make it
sound so easy, and when in reality, it's not. We'll put it this way- to even get
1 Million E-mail addresses with Floodgate, it would take you at least 6 months.

You may ask yourself, "How can they get so many addresses?" We have
been marketing on the Internet for over one year now. All of these E-mail
addresses have been collected within the past month! Are E-Mail Addresses
are updated on a monthly basis. The difference from our Database and other
peoples, is that people on the 'NET' are constantly trading Databases and
they get MANY Duplicates! WE DON'T TRADE OUR E-MAIL DATABASES,
THEY ARE ALL GENERATED IN HOUSE. We have the experience and
knowledge to know where and how to obtain the addresses quickly. We

also receive them from some of the largest ISP's in the country.

There are other SO-CALLED companies that will claim to give you 10 to 20 MILLION ADDRESSES- and they lie! They will only give you 5 to 9 HUNDERED THOUSAND! When you receive them, they're all scrambled up and half of the addresses aren't even valid. They have dates, they are put in many different formats, and extra characters are added on the end of them, so they won't even be sent. You will get 3/4 of the mail back as UNDELIVERABLE, which means the computer can't even send them! Don't be taken by these people.

Also, we have made it as easy as possible for you. We have put them ALL in a Pegasus Mailing List for you! You will also receive a copy of Pegasus Mail, if you don't have it. Then, all you have to do is click 3 BUTTONS and they will be sent. This is as easy as it gets! They have been tested and they are DELIVERABLE, which means they will all go through. We are selling the WHOLE 2 MILLION E-Mail database for only $69.95! If you're asking yourself, "Why are they only selling them for $69.95 when he has a good list, and these OTHER COMPANIES are selling them for $149.00 to $500.00, and their lists are poorly put together?" The answer is simply, "We believe in producing high quality products, that should be priced reasonably." We understand that not all people have Hundreds or even Thousands of Dollars to invest. We have made this as easy as possible for anyone to get started.

With this E-Mail List, we will also include a "Step by Step Guide" that will show you everything you need to know to send your E-Mail out. It's very easy and anybody can do it. So if you have a computer, use it to Make Money Now don't let it cost you money. Just imagine E-mailing 2 MILLION people. That's like sending 2 MILLION letters at .32 cents PER STAMP! Can you imagine if you only had a 1% response rate? That's still 20,000 ORDERS! All you have to do is take your idea and GO! Many people have no idea about the power of the Internet. People are always wondering why other people are wealthy and there not. The reason is simply "THEY TAKE ACTION" And You Can To Right Now!

You can make this work to your advantage and we'll show you how. We can GUARANTEE you that you will never see another offer like this, so act now. The $69.95 is nothing compared to the money you will make from the list. You'll make the $69.95 back in your first mailing.

Here are a few of many testimonials we want to share with you:

Thank you I-Net, I really cannot believe this! I ordered your package to promote my business, and within 10 days, I enrolled over 250 people. This is absolutely amazing!

-James - California-

I-Net, I had to write this to you because you really offer a legitimate service. I have been ripped-off in the past by other people that you have mentioned within your letter. Since I have ordered your 8 million addresses, I am at the point of $300.00 per day right now (which far exceeds the

$245.95 I paid for them). You have helped me so much. I'm greatly in debt to you. Thanks!

-Sharon - Florida-

Here's Everything You'll Receive:

* 2, 4, 6, 8 MILLION E-MAIL ADDRESSES

* Complete Setup Instructions

* A Copy Of Pegasus Mail For Win3.X, Win95 or Mac

* As a Special Bonus, if you order within the next 10 days, we'll give you a 175 page, E-Book called, " Your Personal Complete Guide To The Internet. " It covers every aspect of the Internet from Advanced E-mail to Veronica and shows you how to get full use from the Internet. It even has a whole chapter on Marketing on-line.

*AS A SECOND BONUS FOR ORDERING WITHIN THE NEXT 10 DAYS:
We going to give you 500 HOW-TO-REPORTS That You will have FULL REPRINT RIGHTS TO! So if you don't have a product to market, you'll have over 500 of them NOW! Each of these reports can be sold for as much as $20.00 Each! These are FULL REPORTS "not little 1 page reports".

Here's how to get the E-Mail list:

All orders can be downloaded VIA FTP anyone who is On-Line has this service available to them and you will be sent VIA E-Mail Complete Instructions For Downloading and Setup. Also, they are available on 100mb Zip Disk (Iomega) or CD-ROM for only $35 extra, which includes shipping. The $35 extra charge (for the CD-ROM and Iomega disk) does not apply when ordering 6 million or more addresses.

==========> E-Mail Databases <==========

2 Million E-mail Addresses only $69.95

4 Million E-mail Addresses only $129.95

6 Million E-mail Addresses only $189.95

8 Million E-mail Addresses only $245.95

==========> Order Form <==========

5639. HELP! Morse Code: strange signals

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-13 00:00:00 UTC
From: "Steve J. Quest" <Squest@concentric.net>
Message-ID: <3327D9C4.215D@concentric.net>
Source record: 202524
Cross-posted to: alt.radio.pirate,rec.radio.amateur.misc,rec.radio.shortwave

If you are looking for a challenge, I have one for you. I have
been receiving a message in morse code on all frequencies. Check out
the following URL for a .wav file containing a one minute sample.

http://www.cris.com/~squest/morsewav/oddmors2.wav

This file is one minute of morse code recorded between stations on the
MW or "AM" band. This signal is present nearly 24 hours a day and is
received on all frequencies from longwave 150khz to 30Mhz.

It appears to be keyed by hand, however I am unable to decode
much intelligence from it. If you are able to decode intelligence from
this message, please E-mail your results or comments to
squest@concentric.net. I was unable to find a fundamental frequency for
these transmissions, they may be a local spark gap transmitter of some
sort. I haven't attempted to DF this signal yet, even tho these
transmissions make shortwave and AM radio reception impossible, except
for the stronger stations, then the morse is constantly in the
background. Thank you in advance for any assistance in decoding this
message. Cheers.

sq

(I have a 9 megabyte file containing a half hour sample of this same
transmission, if anyone requires more time to decode intelligence from
this message. Just let me know if you need this file and I will upload
it to an ftp or web site. Due to it's size, I will only upload it if
it is needed to figure out the nature of these transmissions. Please
mail your request to mailto:squest@cris.com)

The manual also states that there will be reduced sensitivity on the
second band, i.e. using the UHF to monitor VHF or visa versa. I have
found this to be true, but not unduely so.

5644. Transmitter Hunt

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-13 00:00:00 UTC
From: cgreenha@magnus.acs.ohio-state.edu
Message-ID: <cgreenha.1142.3327FD4B@magnus.acs.ohio-state.edu>
Source record: 202529

The Columbus March Foxhunt (transmitter hunt) will be Sunday, the 16th, at 2:00pm. The Fox will be within a 10 mile radius of the center point...which is 270 & 33/161 (Dublin).

All hunters must start at the center point...which has been agreed to be the McDonalds, just west of the center point, on 161. This McDonalds is on the south side of 161, right across from the Dublin middle school.

The Fox is required to transmit at least 20 seconds, out of every minute, be heard at the center point for the first 20 minutes of the hunt, and remain stationary.

The winner (the first person or team to locate the transmitter) will get the right to be the Fox for the April hunt!

Remember, you can successfully hunt with nothing more than an HT and a paper clip, and our hunts are a lot of fun, so why not come out and hone your DFing skill, and take a shot at it!

Please reply to this message with any questions and/or comments.

Thank you.

Hal,

This is a crock of crap. I'm in the process of studying for my no-code Tech. Some like myself, may have trouble finding the time to go all out and study both code and regulations/general info. Being a father of 2 I find very little free time available. While this is my excuse for now, I find it much easier to study the written exam, then go back at a later point in time to upgrade to a Tech-Plus.

I'm always amazed at how people get polarized over this issue. No-code Tech is instrumental in bringing new people to the hobby. The more HAMS that are out there, regardless of how they made it, can only help stave off any plan to reallocate HAM bands for commercial use.

I am truly amazed that no matter what the age or how mature we are, there's always that little kid inside willing to gloat over ones accomplishments while putting others down...

Give me a break. If you want to learn it, study it and pass the test.
This posting leads me to think that the author honestly believes that
blacks are too stupid to learn the code. I am white and I find that
thinking very, very wrong. All people of all races can learn new
things if they are truly interested in learning them. It takes
commitment and dedication. Those who are dedicated and show a true
desire to learn will succeed. Those who don't have that desire,
won't. Simple as that.

Myself, as a person with with that small problem, I am doing very well
with the ARRL Intro to Morse Code audio tapes.

If you know of any other people with that problem, you might want
to suggest that they get the tapes... They should make a backup of
their tape, since they will wear it out. I have had mine for more
two weeks, and the tape machine ate one (rewind).

I would also like to add, for those fine folks talking about sentence
structure... I hope you got your rocks off, saying that that with a
person with Dyslexica.

> Why was CQD a distress call? Do the letters have meaning?

CQ was a general call meaning the sending station wanted a call from anyone. People have said it means "seek you", but that's probably just a legend. CQD added a "D" for "distress"

> Same with SOS. Do the letters have meaning or was it chosen because it
> had an easy sound combination to remember and key quikly?

The latter. The letters mean nothing; just an easy-to-recognize sequence.

If you're studying the radio aspects of the Titanic sinking, you should look up David Sarnoff. As a young man, he operated a promotional wireless stations at Wannamaker's department store in New York. Legend has it that he was the one who conducted all contacts with the Titanic, staying at his key day and night. It's almost certainly not true, but just a legend Sarnoff started himself. Sarnoff went on to become president of RCA.

Another interesting sidenote is that there was another ship within sight of the Titanic as she was sinking, but their wireless set was turned off; they didn't realize the Titanic was in distress until it was too late. This led directly to changes in maritime law requiring 24 hour listening watches on ships at sea.

5657. FS CW STATION IDENTIFIER

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-13 00:00:00 UTC
From: ka2qep@webspan.net
Message-ID: <5g9hh8$96g@news.webspan.net>
Source record: 202542

** FoxGap CW Station Identifier **

This unit is great for repeater identification, when your machine is up and running, or when you are down for repair and want to maintain a presence on your frequency. Also it is perfect for beacon use, just add a transmitter. For beacon use it will control your PTT on your FM rig, or key your output in sideband mode.

Features:
* Adjustable CW speed, 5 to 60 words per minute.
* Adjustable code tone, 200 to 1200 Hz.
* 55 character message buffer, plus.
* 55 character alternate message buffer.
* Repeat message time, 1 minute to 24 hours.
* Programmable from your IBM computer.
* Windows 3.1 or Win 95 compatible.
* Adjustable audio output.
* PTT output and Key (or beacon) output.
* Programming cable supplied.
* Small size, 3"L x 1.25"W x .75"H
* Standard 12 volt operation.
* Under 50ma. current consumption.

Programming requirements: IBM or compatible computer with a mouse and one 3.5" HD floppy drive, running Windows 3.1, Win 95, or higher. And a second COMM. port (2,3, or 4).

The FoxGap CW Station Identifier lists for $69.95 For a limited time the intro offer is $50.00. We can ship UPS COD cash only, MO, or certified check. For further information contact Jim at 610-588-0282 Fax 610-588-0282. Or email n2gkw@epix.net

It was a distress call because CQD was a recognizable combination
of Morse characters that many agreed would stand for "help!".
>
> Same with SOS. Do the letters have meaning or was it chosen because it
> had an easy sound combination to remember and key quikly?

Exactly. After the Titanic disaster, SOS became internationally
standardized (although alternate distress calls have periodically
surfaced). It doesn't mean anything, but is a very easily identifiable
set of characters. It is sent, by the way, as ONE character...the
dits and dahs of Morse get run together...dididididahdahdahdididit rather
than dididit dahdahdah dididdit...

Hope that helps!

Tom,

I am interested in a reasonable discussion of techniques that could help dyslexics. When I was getting started I could not hear the difference between an A and an N, R or K, you get the idea. My break through came with "Code Quick" it allowed me the hear the letters. Simply playing of the tape over and over did not work because I could not hear the difference. Trying to do something constructive rather than insulting people may be too much for this group but we can hope.

5668. Eico 753 Repair? In Seattle?

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-13 00:00:00 UTC
From: Ken Finney <kenneth.c.finney@boeing.com>
Message-ID: <33284B49.63AE@boeing.com>
Source record: 202553

I have an Eico 753 (20/40/80M, AM/SSB/CW) that I picked up at an estate sale a couple of years ago. It sat in a box until a couple of months ago, when I plugged it in and verified that it glowed in the dark. I finally connected a wire antenna to it to see what I could pick up until I get a real antenna. Nothing. Nice background hiss like I would expect, but the hiss doesn't change when I connect the antenna. I realize that with a random wire I shouldn't get much signal, but am I wrong that I should get something? I'm looking for someone who knows these beasts to check it out and tell me what needs fixing and how much. I'd like to find a local person to the Seattle area - this isn't the type of thing that ships well (or cheaply).

Thanks in advance.

>operators show to the world, they wish NOT to allow an outdated mode
>to die. They would rather be rigid to the point of breaking the hobby
>off instead of being dynamic or say flexible. How stupid!

If you learned the code, then quit bitchin'.

>I don't care if you want to operate CW. It should not be required
>any longer. International requirements are vanishing, so will this
>'HOBBY' if this rigidness keeps up. This is my opinion.

Where did you read this? I've heard there is *talk* of dropping the
code, not action currently underway.

>I wish the ARRL had just left electronics theory in the test so most
>of you appliance operators would be in this hobby! Electronic theory
>was watered down when the ARRL started generating question pools.
>I would love to see most, NOT all, you extras pass a technical test
>worth something more than outdated 20 wpm CW.

Umm, Woody, The National VEC, comprised in part by the ARRL writes up
the question pools, not the ARRL alone.

>NK2U would have to join the Army, to learn electronic theory not CW!

>Amateur Radio: one auction or so away from its demise...

>Kill the code or kill the hobby?

Should read: Kill the code, you've killed the hobby.

We had a similar thing here a long time ago. It was a telegram station
that sent the morse on 462 kHz, which is very close to the IF of our
radios. This comes in on many of not all AM channels. The station shut
down long ago, when the satellites made it cheaper to send data long
distances.

Steve J. Quest (Squest@concentric.net) wrote:
: If you are looking for a challenge, I have one for you. I have
: been receiving a message in morse code on all frequencies. Check out
: the following URL for a .wav file containing a one minute sample.

: http://www.cris.com/~squest/morsewav/oddmors2.wav

: This file is one minute of morse code recorded between stations on the
: MW or "AM" band. This signal is present nearly 24 hours a day and is
: received on all frequencies from longwave 150khz to 30Mhz.

: It appears to be keyed by hand, however I am unable to decode
: much intelligence from it. If you are able to decode intelligence from
: this message, please E-mail your results or comments to
: squest@concentric.net. I was unable to find a fundamental frequency for
: these transmissions, they may be a local spark gap transmitter of some
: sort. I haven't attempted to DF this signal yet, even tho these
: transmissions make shortwave and AM radio reception impossible, except
: for the stronger stations, then the morse is constantly in the
: background. Thank you in advance for any assistance in decoding this
: message. Cheers.

: sq

: (I have a 9 megabyte file containing a half hour sample of this same
: transmission, if anyone requires more time to decode intelligence from
: this message. Just let me know if you need this file and I will upload
: it to an ftp or web site. Due to it's size, I will only upload it if
: it is needed to figure out the nature of these transmissions. Please
: mail your request to mailto:squest@cris.com)

How can you say that it's a race issue when so many other countries have a much stricter code requirement than we do and there are so many foreign dx stations. I'm sure they're not crying about the code requirement. They just learn it.

Hi !

Please help me with this question. I have a bunch of kiddies studying the Titanic. Right now we are learning about Morse code becasue of the distress signal sent out by the Titanic.

They sent out CQD. Then they tried the new distress call SOS - the first time it was ever used!

Why was CQD chosen as a distress call? Do the letters have meaning?

The same with SOS. Do the letters have meaning or were they just an easy sound configuration to remember and key quickly?

Any info would be helpful.

Thanks.

>>writing.

I personally find that writing on a computer is MUCH easier than
doing it with pen and paper. The ability to easily "cut and paste"
after immediate review makes for better writing. I don't have to
write the whole damn thing over to fix a problem with clarity or
spelling or grammer.

To me, Having to learn to do CW is only slightly more useful than
the memorizing of poems in grammer school was (something totally
pointless).

5695. CQD - SOS Info Request

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-13 00:00:00 UTC
From: Sandra Buckberger <buckberg@minet.gov.mb.ca>
Message-ID: <5g7jkihms2@canopus.cc.umanitoba.ca>
Source record: 202604

Hello,

I need some information on distess calls. I have a bunch of kiddies studying the Titanic. We are learning about Morse code because the ship sent out a CQD distress call and then tried SOS (the first time it was ever used).

Why was CQD a distress call? Do the letters have meaning?

Same with SOS. Do the letters have meaning or was it chosen because it had an easy sound combination to remember and key quikly?

Any info would be great. Thanks.

Sandra Buckberger

'It's my ball....and if you can't play by the rules that I make up as we go along....then I'm going home"!!!!

This is the CHILDISH mentality that the good "prof" supports.

Strange....I've always thought of packet as a network. Like the old fire brigade. You pass the bucket (message) from one volunteer (sysop) to another volunteer (sysop).

I didn't know it was "kosher" for the brigade volunteers to refuse to "pass the bucket" because of a persons political beliefs, what they have for sale, or the color of their skin or the gender of their sex. Nope....you wouldn't find that in a network of fire brigaders!

BUT YOU WILL FIND THIS BEHAVIOR ON PACKET!!!!

(applause!)

Thank you. Thank you very much.

73, and have a hate free day.....

It's not who is doing the passing, it's what's being passed.
If you were in that fire brigade, and someone handed you a
bucket of horse poop, would you pass it on to the next volunteer?

William A. Wetzel <n6rky@pacbell.net> wrote:
>This seems to remind me of the single-side-band versus A.M. arguements of
>years ago. Or, even further back, C.W. versus the Spark Gap????

Study your history, Bill; amateurs were eager to give up spark in
favor of vacuum tubes which generated a continuous rather than
dampened wave. CW gear was easier to build than a spark setup,
operated on a single wave, when allowed operation on the shorter
wavelengths (which meant DX). Find yourself a library that contains
all the early back issues of QST. Fascinating stuff!

It was the maritime service that was reluctant to give up on spark.
Believe it or not, spark wasn't prohibited until January 1, 1966.
From Schroeder(1): "The latest attention to the question of spark in
in maritime communications is seen at the Geneva Conference of 1959.
In the Geneva Radio Regulations there is reiterated the previous
authorization that a mobile station in distress may attract attention
to its plight by any means available, which includes the use of spark
if avilable and necessary. A new proviso makes its appearance at this
point, where it is stated that ``in exceptional circumstances'' a
land station may aid a mobile station in distress by ``...any means
at its disposal.''(2) That is to say, it could use spark, or broaden
its radiotelephone or modulated CW (A2) emissions beyond the frequency
tolerances specified and normally used.
"At long last it appears that the terminal date previously sought
for spark transmitters has been designated by the Geneva Regulations
bringing to a solution a problem second in importance only to that
of obligatory intercommunications.(3) It is categorically stated that
class B emissions will be allowed for distress calls and distress
traffic only until January 1, 1966.(4)..."

(1) Peter B. Schroeder, Contact_At_Sea, A_History_Of_Maritime_Radio_
Communications.
(2) TIAS 4893, p.233, Sec.1382
(3) Marconi Company ops were prohibited (by company policy) from
taking and passing traffic to non-Marconi Company ships and
shore stations; that policy even included jamming of non-Marconi
stations ("laying a brick on the key").
(4) TIAS 4893, p.142, Sec.677

I think questions regarding radio history should be made a
part of the amateur exams; it seems a shame that folks enter
into a field without knowing any of its history.

5712. FREE CASH GRANTS

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-13 00:00:00 UTC
From: lina@usa.NET
Message-ID: <19970217025.GAA08056@94713BIG.COM>
Source record: 202621

Hi, if you have ever considered getting a loan or grant...you should read this.

We Have Over 150 Private Foundations In Our Program All Over the
United States.

WE ARE A FINANCIAL FINDER & MATCHING SERVICE
."INTEREST - FREE CASH GRANTS - NEVER PAY BACK!"...

FOUNDATIONS CAN BE A BETTER SOURCE FOR FINANCE, THAN BANKS

_____
Foundations give away billions of dollars every year to individuals.
Most are non-profit organizations dedicated to the betterment of
society. A foundation is exempt from income tax because of its
non-profit status. Private foundations have been giving out
cash-grants to people for over 100 years. You can check with your
attorney or local chamber of commerce.

ARE YOU BEING REJECTED FOR THE MONEY YOU NEED SO BADLY?

_____
Then Why Not Try A Private Foundation? Interest Free Cash Grants From
$500.00 & Up to $25,000.00. No Collateral. No Cosigners, No Security
Deposit, No Mortgages. No Credit Check. No Pay Back.

The Money May Be Used For Any Worthwhile Purpose; Education,
Personal Welfare, Business, Medical, Religion, Etc.

ANYONE CAN GET AN INTEREST FREE CASH GRANT!

_____
As long as they have a genuine reason for needing money and as long as
the foundation guidelines are met.

Dear Applicant,

This letter tells you HOW YOU CAN GET AN INTEREST-FREE CASH GRANT.
Take a few minutes to read it. You'll be suprised to see how easy it can
be to get a grant. From time to time, everyone needs to
borrow. The problem is that for most people, getting a loan is a big
hassle. Going to banks or finance companies in person takes a lot of
time. In most cases, there is endless paperwork. And Unfortunately,
in many cases all that you end up with is a rejection notice.

ABSOLUTELY NO CREDIT CHECK

_____
Getting a Grant by mail is probably a lot easier than you think. In
your area, there are usually only a small number of places that will
provide you with the money, that you need. On the other hand, there
are literally thousands of private foundations who donate money to

people who have genuine reasons for needing the money.

Chances are that most banks in your area have very stringent loan requirements. On the other hand, most foundations who give GRANTS BY MAIL are more lenient; in a sense that persons who have poor credit, no credit, or even those who have gone through bankruptcy are able to get the money that they need - sent to them by a check payable to them. This is because foundations are NOT interested in CREDIT RATINGS.

GETTING A GRANT BY MAIL IS CONFIDENTIAL

There are no embarrassing interviews. Neither collateral nor cosigners are required. The main requirement is that you have a legitimate need for the money and are willing to use it for whatever reason that the foundation agrees to.

We are not associated with any of the foundations in our program, therefore all money will go directly to you, payable to you. As a Financial Finder & Matching Service, we know where the money is and which private foundations may be most likely to approve your grant. There are thousands of foundations with money to donate. It is our job to put you in touch with them.

PLEASE REMEMBER: CASH-GRANTS are FREE of any interest, & they DO NOT NEED TO BE PAID BACK!

Foundations give out money for a wide variety of needs as long as it is something LEGAL. This means that you obtain the money to cover bills, meet emergency needs, or to buy anything that you might need, as long as the foundation agrees to it.

YOU DECIDE HOW MUCH MONEY YOU WANT TO OBTAIN.

The amount can be as little as $500.00, and up to $25,000.00 is possible. And remember, there is NO CREDIT CHECK.

As a Financial Finder & Matching Service, we'll review your service application form and determine which foundations may be most likely to provide you with the money that you need. Keep in mind that we have only reputable foundations in our program. You are protected by the fact that these foundations are regulated by the laws of the United States.

No matter how much you need to obtain, no matter what you need to use the money for; we feel confident that we can help you to get it with the service we are offering.

WE GUARANTEE THAT UNLESS WE HELP YOU WITH OUR SERVICE, OUR APPLICATION FEE OF $19.95 WILL BE REFUNDED!

Our Application fee is $19.95 . There are absolutely no other fees to pay. All that you will have to do is complete the service application form below, and mail it with payment as indicated on the form. We will process your

service application within 10 days. We will match your FINANCIAL NEEDS
& REQUIREMENTS with the most suitable Private Foundations in our program.

~~~~~~

Message-ID: <01bc30ad$01f77000$6a219480@rnpc1>
Source record: 202425

It's low-band (some bandsplit in 30-50 mHz). Might be able to convert it to
6 meters.

T = Trunk mount
7 = 100W power
1 = 30 - 50 band
RTN = Micor model
3 = PL squelch
1 = single channel
90 = ??
A = version

It is much easier to go to a third-party site like:

www.qrz.com

or

www.lantz.com

and get the info there a few hours after the FCC posts it in raw data
format.

Steve
WB7PSD

PS... in the last 6 months I have had two friends get their first
license through a VE, with electronic filing. The first call was
posted 3.5 days later, the second about 12 days later.

From Tad Cook, KT7H
Seattle, WA March 14, 1997
To all radio amateurs

SB PROP ARL ARLP011
ARLP011 Propagation de KT7H

Sunspot activity was up last week, but solar flux was about the same, average values increasing by a little over one point. Geomagnetic activity was lower.

Over the next few weeks solar flux is expected to stay right in the mid seventies. Geomagnetic activity is expected to increase due to recurring coronal holes around March 26 and 27. This is an echo of the rise in A index that we saw on February 28.

Next week will be the Spring equinox. Expect improved conditions as periods of daylight equalize between the southern and northern hemispheres. Due to continued low flux values, night propagation on 20 meters will still be a problem, as will daytime propagation on 10 and 15 meters. After dark the best bands will be 30 and 40 meters. Best propagation on 20 meters will continue to be in the morning after sunrise toward the east, and in the late afternoon and early evening toward the west.

Sunspot Numbers for March 6 through 12 were 11, 12, 26, 26, 17, 15 and 21 with a mean of 18.3. 10.7 cm flux was 75.4, 74.1, 74.7, 75.1, 74.7, 74.3 and 74.3, with a mean of 74.7. Estimated planetary A indices for the same period were 8, 8, 5, 3, 3, 4, and 12, with a mean of 6.1.

Try http://www.lantz.com/htbin/cbs_today (for latest FCC postings)

Also, www.geocities.com/CapeCanaveral/2931/cbsearch.htm (call sign database-lags behind the one above, but has more info)

BTW, I took the exam on 3-7-97 and it was posted on the above page today, so you're looking at about a week...

Hope this helps

The book is pseudo-science nonsense mixed with anti-military paranoia.
HAARP is an excellent active ionospheric research project. It is basic
science research on the same order as many other basic science projects
which have been sponsored by the military. The knowledge gained will
almost certainly be of use to propagation modelers. That may be useful to
the military, for example it may lead to better OTH radar systems, and it
will certainly be useful to other HF users, such as radio amateurs, as
well. Radio amateurs should support HAARP in any way that we can, because
it will ultimately be of benefit to the amateur community, and because
research into radio propagation is one of the international charter
purposes of the amateur radio service.

>
> The CODE MUST Survive! QRPers can easily build
> CW rigs.

True, but they can just as easily build FSK rigs and pick
up a 6 db decoding advantage. And we must ask, is *simple*
what we want amateurs to be? Amateur radio is supposed to
supply a pool of trained technicians and electronics experts,
but there is no demand for trained Morse operators or experts
in simple MOPA transmitter construction any longer.

We can communicate further and with less
> power with narrowband comms.

Apparently you aren't aware of the Shannon relation.
That tells us we can use less power for a given information
rate if we are willing to use more bandwidth to transmit it.
This is *the* fundamental fact of communications. That
amateurs fail to understand it is a condemnation of
amateur radio, and the Morse Myths with which it is
burdened.

> Also I respect code
> operators immensely -- I've never herd them send
> Uh,,, Uh,,, Yeah.... and those other utterrances
> you hear on the 2M band.

True, they just send -...- -...- when they can't remember
what they were trying to say when they started the sentence,
due to the incredible slowness of the method.

> It also is part of understanding communications.
> Reading Teletype Tape, Understanding differrent
> signal types. Ham Radio isn't just about you and
> I chewin' the fat. We have access to communications
> media and must all strive to become knowledgeable in
> all facets of it.

Indeed, amateurs are supposed to keep abreast of
communications technology. But we don't want them
to be proficient at spark transmission any longer, nor
do we require them to be expert at selecting and
polishing galena. Those techniques are no longer
relevant. And reading punched tape is nearly as

obsolete a skill as OOK Morse or spark.

> The perception that HAM operators are knowledgeable
> on ALL forms of communications is one that we should
> emminate. That's what it's all about. Learning by
> doing. Walk before run. Building an antenna -vs-
> storebought. We know about the binary codes in computers.
>
> We should be proficient in the binary code for Radio
> Wave Communications.

We probably should, binary is a robust signaling method,
especially coherent BPSK, but OOK Morse isn't binary. It is a
quintenary alphanumeric encoding with three of the states
not transmitted but left to be inferred against the gaussian
background. That costs a 3.98 db penalty in decoding
compared to a fully transmitted encoding.

If you want amateurs to be knowledgeable about communications,
you should start with yourself. Attempting to perpetuate the Morse
Myths does neither you nor the amateur service any credit.

It is true that people are loath to cut their losses and abandon
a bad investment. And the more that they have invested, the
more loath they are to abandon it. But the rational person
realizes that to be an ultimately foolish course. It is better to
learn the lesson at minimum cost and get out before the
level of investment is so large as to be seriously damaging
to the interests of the person. Rather than continuing to throw
away his most valuable commodity, his time, on an exercise
of dubious value, it is better to cut the loss and invest that
time in a more profitable activity.

> Handwriting - who among us has actually hand-written a
> letter in the past year? Other than signing our names
> and/or filling out checks, how much writing do we do
> anymore?!

Very few of us, especially if we are computer literate, waste
our time on handwriting any more. In fact that started before
the advent of the computer. When the typewriter was ubiquitous,
that trend had already taken hold. Most of us can type more
efficiently than we can write in longhand. And the result is almost
always more legible as well. So it not only saves our time, it
saves the time of the person with which we are communicating.
It also removes a major cause of miscommunication.

> Look at the schools .... in many (most?) places, school kids

> thinking that goes into something written while using a computer
> as doing it by hand .... yes it IS slower ... but it DOES force
> the writer to spend a bit more time thinking about what he's
> writing.

I believe that to be totally false. Because use of a word processor
makes revisions easier, people do look at their text and go back
and correct, revise, and edit their writing so that it is more coherent,
lucid, and to the point. With handwriting, one has to start over and
laborously rewrite the entire text in order to improve the result. That
is seldom done, so handwritten missives are usually submitted as
first drafts. They often lack the clarity and direction which a well
edited message would have.

> I hadn't read of anyone making the comparison (if there really
> is one) between the dying off of CW and that of legible hand-
> writing.

There may be one in the sense that writing with a quill pen is
obsolete, and so is OOK Morse. Both have been superceded
by superior machine assisted techniques.

--------------167E2781446B
Content-Type: text/plain; charset=us-ascii; name="azproj.ann"
Content-Transfer-Encoding: 7bit
Content-Disposition: inline; filename="azproj.ann"

Announcement: AZ_PROJ v1.04 Azimuthal Equidistant Postscript Mapping package
available from the AZ_PROJ Map Server Website at

http://www.arscorp.com:1080/

a new location

where you can also download the code

The file is azprj104.zip (approx 1.2M).

The new features are

1. Orthographic orientation option
(The Orthographic projection puts South at the top of the
page). Needed for people in the Southern Hemisphere (-:

2. ARRL grid square labelling style added. The ARRL
style has much smaller labels for the grid squares and puts
the letter square labels in the bottom left of the square.
The grid square labelling style used in v1.00-v1.03 is
now called az_proj style.

3. Several different options added for shading
worked grid squares (different colors, different cross
hatching methods) so that it's possible to mark grid
squares worked by two (or more) different people. See
the sample grid.dat file for more info. You can also use
the same options for marking the grids at the ends of a
qso (see qso.dat for examples).

4. Plotting TV stations for North America (NA)
and Europe. A full list of NA stations broadcast

stations (MW, FM, TV) in machine readable format has been produced by Colin K4SSO. A separate file consisting of only the NA Channel 2 stations (55.25MHz useful as 6m propagation markers) has been added. A list of European TV stations (from Geoff Brown and Emil W3EP) has been converted to machine readable format, for 6m propagation markers.

5. DAT file formats are still changing (sorry). Anything which is a transmitter (TV station, rover, beacon, repeater) all have the same format. The only thing which changes is the symbol displayed. Please note the changes detailed in each .DAT file (at most you will have to add an extra colon or two to your old files if you want to update them).

6. GRID2.DAT file format of v1.03 is now standard (and called the GRID format, with no 2). The old format from v1.00 which had been used in parallel, has been dropped.

7. An install.bat file has been added to install AZ_PROJ and Ghoscript onto a DOS machine with a VGA or SVGA monitor. Sample batch files for testing both Ghostscript and AZ_PROJ are included.

8. Easier method for choosing when to draw grid square borders and compass (in az_ini.ps). (Also clearer explanation of what's happening, I hope).

9. Display of USA by call areas (0..9) rather than (or as well as) by states.

10. Labelling feature. The center of the line on which the label sits, is at the lat/lon (cf annotations where a blob is at the lat/lon). This feature can be used for labelling continents, countries... The size of the characters can be chosen differently for each entry, and the size chosen scales with the map scale. You can try this feature out, by labelling the US call areas with the file us_call.dat when the numbers 0..9 will be drawn in each call area. The borders of the call areas can be drawn by turning on /draw_USA_call_areas in az_ini.ps.

Joe NA3T
mack@ncifcrf.gov

and

Michael NV3Z

General blurb about AZ_PROJ

AZ_PROJ is a collection of postscript files and data
files for generating azimuthal equidistance projections of the earth
from (almost) any point on earth. It can plot color maps of the
surface of the earth on any scale, draw and/or label grid squares,
show worked grid squares on a band(s) of your choice, dxcc
countries (and countries worked an a particular mode, eg CW/SSB),
mountain tops, rovers, repeaters, beacons and can use NMEA input
from a GPS receiver to center the map.

AZ_PROJ can be run on ANY computer (Mac, PC/DOS/Win/DVX, Unix)
and output to a postscript device (printer, ghostscript runing on a
unix or DOS machine with a ghostscript compatible printer, eg
HPcolor inkjets). Ghostscript will also allow display of the maps
on screens.

Although a rudimentary understanding of postscript will
help in running AZ_PROJ, sample .bat files are supplied to make
initial maps and it should be possible to make simple changes to
the az_ini.ps and *.bat files to get the maps you want.

To display the maps on a screen or to use a
non-postscript printer, you should first obtain ghostscript
(available for PC (DOS, Win, DesqViewX) or Unix) from your
favorite ftp site (try ftp.cs.wisc.edu/pub/ghost)

The AZ_PROJ files are GNU copylefted.

Hams? Where is "ham" radio mentioned in Part 97?
Where is "sport" flying mentioned in the FAA regs?

I serve in Oahu Civil Defense RACES on the Quick Response Team - we're activated for hurricane and tsunami warnings. My work with RACES comprises about 0.1% of my operating time; the other 99.9% is spent treating amateur radio as a hobby - building radios, reading radio history, and operating CW.

In S97.1(e) (that section outlines the reasons for our existance), the FCC says that amateurs have a unique ability to extend international goodwill - sounds like they're giving us the green-light to work DX and have fun (i.e., treat amateur radio as a hobby).

You'll have to get used to the fact that our pastime is both a service *and* a hobby.

Let me ask you a question, Jerry: When you get on 2m and talk with your friends, what service are you providing? Don't cast the first stone if you live in a glass house!

5729. RF Safety Calculator

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-14 00:00:00 UTC
From: kharker@cs.utexas.edu
Message-ID: <kharker-1403971655010001@slip-107-8.ots.utexas.edu>
Source record: 202439
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

This is just a reminder that the RF Safety Calculator is available on the World Wide Web. This is a public-domain adaptation of the public-domain program written and published in _CQ VHF_ magazine by Wayne Overbeck N6NB for use in computing the approximate, far-field RF power density of Amateur Radio stations. Beginning in January, 1998, Radio Amateurs licensed by the FCC will need to perform annual surveys of their stations to ensure they meet the FCC's RF safety standards for controlled and uncontrolled environments.** This tool may be useful as a part of such a survey. Source code for the RF Safety Calculator and N6NB's program are both available from links on the web page.

The RF Safety Calculator is available from the University of Texas Amateur Radio Club home page at (http://www.utexas.edu/students/utarc/).

Recent improvements:

* Output formatting of power and distance has been improved to two decimal places - the calculations have always been even more precise than this, only the output formatting has changed. This is particularly useful for calculations involving microwave stations.

* You can now input power levels higher than 1500 watts. This restriction was an artifact of the CGI input mechanism I use. Higher power levels may be useful for those interested in computing the RF power density of local 50KW braodcast stations, for instance...

Also, note: This tool is intended for far-field calculations, that is, for distances several wavelengths away from the center of the antenna. Thus, while this is suitable for checking the RF power density of a 70cm EME array at 250 feet, it is not the best tool to use for checking the RF power density of your 2m HT at 0.5 feet. A pointer to a more appropriate tool for near-field calculations, provided by the ARRL, is available on the RF Safety Calculator web page.

**Stations running less than 50 watts and mobile stations using PTT transmission, regardless of power, are exmpt from the annual survey requirement, but are not exempt from meeting the RF safety standards. See (http://www.arrl.org/news/rfsafety/) for much more information on the new regulations.

Depends on the method you're using to modulate your voice. FM transmitting
is only a varactor on a CW transmitter. Receivers are tricky for either CW
or FM.

Hello,

This is a question for any of you with your own web page. I'm currently searching for Ham Radio related graphics:antenna, coax,etc...I found a page which contained quite a few, but neglected to bookmark it. Now, I can't seem to find *any* sites containing these types of graphics. Does anyone know of a site that has them? You help is appreciated. Send replies to: cerealcat@mail.utexas.edu Have a great day!

>phone xcvr or atv counterpart?

If code testing ended, what would prevent you frm building
a CW transmitter anyway? The issue isn't to end the USE
of CW by those that want to use it for DX, QRP or whatever.

>while the wpm req is probably high for today's standards, code is a
>great thing to have knowlege of and should be a required part
>of the licensing system.

But you offer NO reason why. You just say it's great to have the
knowledge.

>perhaps
>not such a block to the hf bands but should be in the mix. i personally
>frequent other modes of operation with atv being my latest project for
>my multi-cast repeater system. still yet, cw come into play whenever a
>minimalist/survivalist notion comes about.

Not any more in terms of those that are truly active in the
survivalist and safety aspects of CW. There hasn't even been
a viable use of CW in an emergency condition in years.

> i have built [as countless
>others] a cw transceiver that is powered by alternate energy. it has 4
>rechargeble AA batts that are charged either by sunlight or wind power.
>this really sparks the interest during field day and open houses at the
>club meetings.

And why should that end if CW testing as a requirement ends?

>> Morse code is the 90's equivalent of smoke signals. It's a quaint and
>> interesting skill, but has no longer has any practical value. The fact
>> that it has been abandoned by every other communications entity should
>> tell you something.

>not so, just about every security oriented solution has cw as backup.

Please enlighten us on where that backup is being relied on?
The original statement is correct, CW has been abandoned as a viable
mode for any and all types of emergency communications, both in and
outside of amateur radio.

> i
>do advocate relegating cw to backup as it's major role but as important
>a requirement as any other. what happens in the thousand what-if
>scenarios when a homebrew min cw xcvr is the last means of
>communications?

The lack of even one credible example of that happening is
where the argument fails totally. You want every ham with HF
access to learn CW just in case someone on HF runs into
that situation? The economics of requiring CW today in
case of the one-in-a-million case is not justifiable. We'd be
better off and save more lives mandating all hams know CPR.

>> We all lament that it's so hard to get young people interested in ham
>> radio, but come on you old buzzards!!! CW IS BORING! How are you going
>> to convince the average 10 year old, who will barely even wait for a
>> 28,800 b.p.s. modem to do its thing, that tippy-tapping dots and dashes
>> at 13 or even 20 w.p.m. is exciting? You're offering them a horse &
>> buggy in a space shuttle world, so it should shock no one that they're
>> not listening.

>the code deciphering programs on my BBS are among the most popular.
>kids still like that "secrect code" idea. i agree that it should not
>keep them from certain bands and such but still should be a requirement
>along with more intense theory.

You still offer only yur opinion that we should have CW. You offer
no reasons why.

>> If we were genuinely interested in perpetuating this hobby, we would
>> dump CW outright

>i think this would be a giant step in the wrong direction. while i
>advocate revamping the code requirements/restrictions, i still feel it
>is important.

Because??

>> and shift focus towards computers, packet, ATV, and
>> satellite communications. See a theme here, ladies & gentlemen?
>>
>i have been a computer pioneer for over 20 years, i can't wait to get
>all the new and improved stuff but would be "just another appliance
>operator" without the experience and training on all the old antiquated
>hardware, software, programming concepts.

Radio engineers and techs do not require CW knowledge to
be competent. Neither do hams. As a Navy technician, I never had to
know more code yet I had no problem at all maintaining and

repairing any of the shipboard electronics we had.

>> For the record, I am a ham & got my ticket long before no-code, so I'm
>> not playing sour grapes here.
>>
>i'm new to the ham radio world but not to the fun stuff it encompasses.
>years of 11 meter listening/disecting sparked while vhf lo/hi police
>band fueled the fire. a ham came to the electronics repair store i

>a 4 tape code course.

>with no previous code training [except for the morse code chart on my
>walkie talkies as a kid!] i came away with a general class ticket in one
>test session.

Wonderful, but that is not the norm, especially as it relates to the
code.

>i guess my point is that if someone wants something and is on fire for
>it, he/she will do what is required to get it.

That's true, but what is required should be justifiable in terms of
why it is a requirement in the first place.

>if they drop the 20wpm before i upgrade adv/extra, that will be fine.
>if not i will be ready for that too.

>> No biggie. Just my opinion.

>absolutely, no need for flames in this group. plenty of non-hams and
>prospects reading here to see what it's all about.

No flame intended at all. Just honest questions and counter
comments.

>
>Stacey, AA7YA

I'm not anti-code, but I do believe the code exams are outdated and
need to be replaced or removed.

You'll note that I passed the code "like a man" (aren't women allowed to
pass the code test too?). Perhaps your energy spent lecturing people
would be better spent actually understanding the issues?

SB QST ARL ARLB014
ARLB014 Ham radio Volunteer Services bill introduced

Good news for ham radio volunteers: the Amateur Radio Volunteer Services Act of 1997 (HR 1013)--introduced this week by US Rep Anna Eshoo of California. If enacted, the bill would place volunteers in the Volunteer Examination Program and the Amateur Auxiliary under the protections of the Federal Tort Claims Act by affording them the same legal protections as employees of the Federal Government while they're carrying out such volunteer duties. ''This bill would help protect the personal liability of volunteer Amateur Radio operators while performing duties on behalf of the Federal Government,'' Eshoo said in introducing the measure. As she explained it on the House floor, it's simply a question of fairness for volunteers, who risk damaging lawsuits while saving the government time and money. The bill was introduced with 21 cosponsors hailing from both parties.

HR 1013 is nearly identical to a bill introduced last year but not enacted and similar to a unanimously accepted amendment to the FCC reauthorization bill that Eshoo herself offered last year in the Commerce Committee.

On the House floor, Eshoo outlined the rationale behind the Amateur Radio Volunteer Services Act of 1997 in these words, and urged her colleagues to support the bill:

''Amateur Radio operators are self-regulated, with volunteer operators monitoring the airwaves for violations and administering licensing exams. This volunteer corps saves countless hours of staff time and resources for the Federal Communications Commission; however, because they are not Federal employees, they put their personal assets at risk in the event of actions taken against them as a result of their volunteer service to the Government.''

''It is simply unfair that these volunteers who are saving the Government time and resources should have to risk their personal assets in carrying out their service. The Amateur Radio Volunteer Services Act would classify those individuals donating their time and expertise to maintaining the quality of the Amateur Radio airwaves as Federal employees only for the purpose of actions taken against them in the performance of their duties as self-regulators. This action will ensure the continued viability of the amateur radio community and continue to save the FCC and the Federal Government time and money that would otherwise need to be expended.''

From ARRL Headquarters
Newington CT March 14, 1997
To all radio amateurs

SB QST ARL ARLB015
ARLB015 1x1 call signs put on ice

The FCC won't be authorizing any more 1x1 Amateur Radio call signs under Special Temporary Authority (STA) any time soon. That was the word this week from David Horowitz, the acting chief of the FCC's Private Wireless Division. Horowitz--who's an attorney--said he felt the FCC should not have issued STAs for any 1x1 call signs while a rulemaking proceeding regarding formal rules for 1x1 call signs, FCC Docket WT 95-57, was in the works. Action in that proceeding might not happen for several months.

Horowitz' decision effectively denied a half dozen or so pending requests for 1x1 call sign STAs. Some two dozen written STA requests for 1x1 call signs were routinely granted over the past year or so by former Private Wireless Division Chief Robert McNamara. That number does not include the 52 1x1 call signs issued for use by contestants in last summer's World Radiosport Team Championship 96 (WRTC-96) event in the San Francisco Bay area.

The League has been assured by the FCC Wireless Telecommunications Bureau that it will move expeditiously toward concluding the docket proceeding that includes the 1x1 call sign rules matter.

--
Hi Jacob -- try the Xtal Set Society Page at URL:
http://www.1stnet.net/~xtalset/

As to how the xtal set works -- first examine the received AM (Amplitude Modulated) signal -- it is a radio frequency (RF) wave that is modulated with audio frequencies (AF)(voice, music etc). With no modulation applied -- the RF (carrier) is a constant amplitude. Should you tune into a station transmitting a carrier with no modulation -- no audio would be detected -- just silence with a marked reduction in atmospheric static. When audio is applied to modulate the RF -- the amplitude of the carrier increases and decreases at the audio rate. The RF acts as a carrier to allow sending the signal over the air. Both the top and the bottom of the modulated carrier vary in amplitude at the audio rate. It is therefore necessary to "detect" only the top or bottom portion. The crystal detector is a rectifier (a one way gate), it and a filter strips off the RF and reconstitutes the AF. A sensitive pair of headphones will reproduce the detected audio. A coil and capacitor is used in the front end to tune the set to the desired Radio Frequency. Looking at waveforms on an oscilloscope readily show this. There are some books on the Xtal Society Page that cover fundamentals. In any AM receiver -- a detector is necessary -- at first it was crystals -- then vacuum tubes -- then ICs -- but in each case the AM detector is essentially a rectifier or diode.

HAM RADIO VOLUNTEER SERVICES BILL INTRODUCED

Good news for ham radio volunteers: the Amateur Radio Volunteer Services Act of 1997 (HR 1013)--introduced this week by US Rep Anna Eshoo of California. If enacted, the bill would place volunteers in the Volunteer Examination Program and the Amateur Auxiliary under the protections of the Federal Tort Claims Act by affording them the same legal protections as employees of the Federal Government while they're carrying out such volunteer duties. "This bill would help protect the personal liability of volunteer Amateur Radio operators while performing duties on behalf of the Federal Government," Eshoo said in introducing the measure. As she explained it on the House floor, it's simply a question of fairness for volunteers, who risk damaging lawsuits while saving the government time and money. The bill was introduced with 21 cosponsors hailing from both parties.

HR 1013 is nearly identical to a bill introduced last year but not enacted and similar to a unanimously accepted amendment to the FCC reauthorization

bill that Eshoo herself offered last year in the Commerce Committee.

On the House floor, Eshoo outlined the rationale behind the Amateur Radio Volunteer Services Act of 1997 in these words, and urged her colleagues to support the bill:

"Amateur Radio operators are self-regulated, with volunteer operators monitoring the airwaves for violations and administering licensing exams. This volunteer corps saves countless hours of staff time and resources for the Federal Communications Commission; however, because they are not Federal employees, they put their personal assets at risk in the event of actions taken against them as a result of their volunteer service to the Government."

"It is simply unfair that these volunteers who are saving the Government time and resources should have to risk their personal assets in carrying out their service. The Amateur Radio Volunteer Services Act would classify those individuals donating their time and expertise to maintaining the quality of the Amateur Radio airwaves as Federal employees only for the purpose of actions taken against them in the performance of their duties as self-regulators. This action will ensure the continued viability of the amateur radio community and continue to save the FCC and the Federal Government time and money that would otherwise need to be expended."

1x1 CALL SIGNS PUT ON ICE

The FCC won't be authorizing any more 1x1 Amateur Radio call signs under Special Temporary Authority (STA) any time soon. That was the word this week from David Horowitz, the acting chief of the FCC's Private Wireless Division. Horowitz--who's an attorney--said he felt the FCC should not have issued STAs for any 1x1 call signs while a rulemaking proceeding regarding formal rules for 1x1 call signs, FCC Docket WT 95-57, was in the works. Action in that proceeding might not happen for several months.

Horowitz' decision effectively denied a half dozen or so pending requests for 1x1 call sign STAs. Some two dozen written STA requests for 1x1 call signs were routinely granted over the past year or so by former Private Wireless Division Chief Robert McNamara. That number does not include the 52 1x1 call signs issued for use by contestants in last summer's World Radiosport Team Championship 96 (WRTC-96) event in the San Francisco Bay area.

The League has been assured by the FCC Wireless Telecommunications Bureau that it will move expeditiously toward concluding the docket proceeding that includes the 1x1 call sign rules matter.

SAREX ABOARD STS-83; LAUNCH SET FOR APRIL 3

Eighteen schools, including institutions in the People's Republic of China and on Okinawa, have been picked for scheduled SAREX contacts during NASA's STS-83 space shuttle mission set for launch early on the morning of April 3. Three hams are scheduled to be aboard the shuttle Columbia. They are James D. Halsell, KC5RNI, mission commander; Janice E. Voss, KC5BTK, payload

commander; and Donald A. Thomas, KC5FVF, mission specialist. The STS-83 flight is scheduled to last 16 days. The mission will carry SAREX configuration C: voice and packet. The mission's primary payload is the microgravity science laboratory.

The schools selected for STS-83 SAREX contacts are:

* Alvin C. York Agricultural Institute, Jamestown, Tennessee (assisting club: Fentress County Radio Club)
* Artesia Public Schools, Artesia, New Mexico (assisting club: Pecos Valley Amateur Radio Club)
* Beau Chene High School, Arnaudville, Louisiana (assisting club: Opelousas Area Amateur Radio Club)
* Center Street School, El Segundo, California (assisting club: Aerospace Amateur Radio Club)
* County College of Morris, Randolph, New Jersey (assisting club: Morris Radio Club)
* Crittenden Middle School, Mountain View, California (assisting club: Ames Amateur Radio Club)
* Edgewater High School, Orlando, Florida (assisting club: Edgewater High Amateur Radio Club)
* Ione Junior High School, Jackson, California (assisting: Dave Larsen, N6CO)
* Lawrence Intermediate School, Lawrenceville, New Jersey (assisting club: Delaware Valley Radio Association)
* Lester Middle School (Department of Defense Dependents Schools, Pacific), Okinawa, Japan (assisting club: Radio Society of Okinawa)
* Lexington Traditional Magnet School, Lexington, Kentucky (assisting club: Bluegrass Amateur Radio Society Inc)
* Mountain View Elementary School, Dewey, Arizona (assisting club: Yavapai Amateur Radio Club)
* Public School No. 9, New York, New York (assisting club: Cooper Union Amateur Radio Club)
* Robert J. Burch Elementary School, Tyrone, Georgia (assisting club: Fayette County Repeater Association)
* S. J. Davis Middle School, San Antonio, Texas (assisting club: Southwest Research Center Amateur Radio Club)
* Sonny Carter Elementary School, Macon, Georgia (assisting club: Bibb County Amateur Radio Emergency Service)
* Troy Intermediate School, Troy, Texas (assisting club: Temple Amateur Radio Club Inc)
* Tsinghua University, Beijing, Peoples Republic of China (assisting clubs: China Radio Sports Association and Tsinghua University Amateur Radio Club).

The SAREX Working Group has designated the following frequencies during the STS-83 mission:

* FM voice downlink (worldwide): 145.55 MHz
* FM voice uplink: 144.91, 144.93, 144.95, 144.97, and 144.99 MHz
* FM voice uplink (Europe only): 144.70, 144.75, and 144.80 MHz

If packet is available, the FM packet downlink will be 145.55 MHz; the uplink will be 144.49 MHz. The FM packet call sign will be W5RRR-1.

The SAREX hardware will be flown in configuration B, voice-only, battery operation. The SAREX equipment aboard STS-83 includes the Motorola 2-meter FM hand-held transceiver, 15 spare batteries, the window antenna, SAREX headset assembly, personal recorder and the required interconnecting cables. Since STS-83 is an extended duration flight with power-hungry primary experiments, the power allocated for SAREX is 0 W.

The SAREX team is also flying the Heathkit packet radio TNC for possible use later in the flight. If power conservation measures are successful, the mission control team will advise SAREX and the astronauts to initiate use of the packet radio system, which also includes one of the Shuttle Laptop computers.

Reports and QSLs go to ARRL-EAD, STS-83 QSL, 225 Main St, Newington, CT 06111-1494. Include the following information: STS-83, date, time in UTC, frequency and mode (FM, voice or packet). You must also include an sase using a large, business-size envelope if you wish to receive a card.--AMSAT News Service/SAREX Working Group

AEA INKS DEALS TO SELL PRODUCT LINES

Advanced Electronic Applications (AEA) has closed deals to sell its product lines to two other companies, but the AEA name will live on. Former AEA Chairman Mike Lamb, N7ML, says AEA's line of antennas, antenna analyzers and cable-testing equipment was sold, effective March 7, to Tempo Research of Vista, California. Tempo will handle all technical support, warranty and after-warranty service and plans to produce the products in the antenna, antenna analyzer and cable-testing line that AEA had been producing before it ceased operation late last year. Tempo will continue the AEA name under a separate division. Lamb says he will assume a primary marketing position with the new division.

Lamb said he's excited about the prospect of continuing a role with a portion of the AEA product line that he had a particular interest in. He said he hopes to work on new product development as well.

Timewave Technology of St Paul, Minnesota--already a major name in ham radio gear--is buying the rights to all other AEA products, including its digital line. But Timewave president Randy Gawtry, K0CBH, asked the amateur community to give the company a few weeks to set up the new product line before calling. "Watch our Web page," he said (it's at http://www.timewave.com). Gawtry says a purchase agreement is in place, and Timewave is in the process of making the product line transition from AEA to Timewave and hopes to be manufacturing products soon. Timewave will have the right to use the AEA name for one year (AEA model numbers will be continued, however). Gawtry said Timewave also will handle technical support and warranty and after-warranty service for the new product line, which will includes AEA's DSP-232 multimode TNC, introduced last year.

Callers to the former AEA number are now being directed to either Tempo or Timewave, as appropriate. Tempo Research is at 619-598-9677. Timewave's

number is 612-452-5939.

HAM RADIO ROLE IN WB MOVIE

Some ham radio paraphernalia supplied by the ARRL will appear in the upcoming Warner Brothers' film, Contact. The League loaned the moviemakers vintage QSTs and other publications and maps for use in the production. Mike Gastaldo of WB's props department said the radio shack scenes "happen in the first 15 minutes of the film. You can tell people to go for the ham radio scenes and stay for the astrophysics."

Gastaldo expressed thanks to the League for "helping us to portray Amateur Radio in as realistic and positive a way as possible." The movie is scheduled to open July 11.

HAM RADIO & MORE GETS REPRIEVE

The Ham Radio & More radio program will continue, says program host Len Winkler, KB7LPW. Winkler said he got the good word recently from Ron Cohen, general manager of KFNN Radio (1510 AM) in Phoenix, which owns and originates the program, which is syndicated to about 20 local commercial stations around the country and shortwave station WWCR. Ham Radio & More has been on the air for six years. Cohen told Winkler that the station has "received some encouraging responses to sponsorship." Darlene Grimes, N7XYB, also has taken over the marketing of the program, which airs each Sunday evening. "We are very hopeful of more industry suppliers and organizations jumping on the bandwagon and supporting a show that really does support Amateur Radio," Winkler said.

Ham Radio & More show information is available on the Web at http://www.goodnet.com/~lenwink/hrm.htm. Ham Radio & More airs live Sundays at 6 PM Eastern (2300 UTC) and may be heard locally on commercial stations as well as on WWCR at 5.070 MHz and on RealAudio via the Internet at http://www.AudioNet.com/radio/business/kbnp. The program airs on a delayed basis via WWCR Mondays at 1000 UTC on 3.210 MHz.

ARRL SECTION MANAGER CANDIDATES UNOPPOSED

Five incumbents and two new section managers will officially take office July 1, 1997. Nominations closed March 7 for section manager candidates involved, but because there was only a single candidate in each of the sections involved, no elections will be necessary.

Incumbent section managers who ran unopposed are Richard Fairweather, K1KYI, Rhode Island; James Rudnicki, NZ7T, Utah; William Howard, WB3V, Maryland/DC; Alan Shuman, N1FIK, New Hampshire; Donald Costello, AB6TA, San Joaquin Valley.

New section managers-elect are Robert Davis, K7IY, Nevada, and Roy Edwards Sr, KB2LUO, Northern New Jersey. Candidates for the West Texas section manager position will be resolicited later this year.

SOUTHERN CALIFORNIA MEMBERS: MARCH QST IS ON ITS WAY!

We've received numerous calls from ARRL members in Southern California who never received March QST, and we've been issuing replacement copies upon request while investigating the problem. We discovered that once the magazines had entered the US Postal Service stream, they were put on the wrong train and spent several weeks in a Houston, Texas, postal facility. The magazines are currently on their way to Southern California and should be delivered to the Los Angeles Bulk Mail Center on Friday, March 14. From there they will be dispersed to the intended recipients. Although this occurrence was beyond our control, we apologize for any inconvenience it may have caused.--Deb Jahnke, Circulation Manager, QST

NEW HEADQUARTERS PHONE NUMBERS

Out with the old, in with the new. ARRL HQ has had new telephone numbers for more than a year now, but has kept the old numbers active so those who need to get in touch with us won't have to dial twice. And just after we got our new telephone numbers, the telephone company changed our area code from 203 to 860.

Now, the time has come to disconnect the League's old main telephone number and three of the old fax numbers. The old numbers--including the main switchboard number, 666-1541--will stop working as of April 30. The new numbers include the main switchboard (860-594-0200), the fax machine in the Executive Vice President's office (860-594-0259), the fax machine in the comptroller's office (860-594-7109) and the fax machine in publication sales (860-594-0303). Frequent callers should make a note of these. For the next 12 months, callers to the old numbers will get a recording that will give them the new numbers.

SUNSPOTS STUCK IN THE 70s

Solar prognosticator Tad Cook, KT7H, in Seattle, Washington, reports: Sunspot activity was up last week, but solar flux was about the same. Average values increased by a little over one point. Geomagnetic activity was lower. Over the next few weeks, solar flux is expected to stay right in the mid 70s. Geomagnetic activity is expected to increase around March 26 and 27, due to recurring coronal holes. This is an echo of the rise in A index that we saw on February 28. Next week will be the Spring equinox.

Expect improved conditions as periods of daylight equalize between the southern and northern hemispheres. Due to continued low flux values, night propagation on 20 meters will still be a problem, as will daytime propagation on 10 and 15 meters. After dark the best bands will be 30 and 40 meters. Best propagation on 20 meters will continue to be in the morning after sunrise toward the east, and in the late afternoon and early evening toward the west.

Sunspot numbers for March 6 through 12 were 11, 12, 26, 26, 17, 15 and 21, respectively, with a mean of 18.3. The 10.7-cm flux was 75.4, 74.1, 74.7, 75.1, 74.7, 74.3 and 74.3, respectively, with a mean of 74.7. Estimated planetary A indices for the same period were 8, 8, 5, 3, 3, 4, and 12, respectively, with a mean of 6.1.

IN BRIEF:

* HQ job opening: ARRL Headquarters has a full-time opening for the position of Assistant Contest Manager. The position is in Newington, Connecticut. Candidates must be thoroughly interested and knowledgeable in the League's varied contest programs and familiar with DXCC countries, ARRL sections and divisions, and current contesting issues. An Amateur Radio license, writing skills, PC familiarity, including DOS, Windows, database management and e-mail are required. A high degree of attention to detail and the ability to work well under deadline pressure is required. Pay range is in the mid to upper teens. Send resume and salary expectations to R. Boucher, ARRL, 225 Main St, Newington, CT 06111; fax 860-594-0298; e-mail rboucher@arrl.org.

* Burgeoning ARISS support: Nine ham radio organizations and societies have so far signed the Amateur Radio on the International Space Station (ARISS) memorandum of understanding. In addition to the ARRL, signatories include Radio Amateurs of Canada (RAC), AMSAT-Canada, REF (France), AMSAT-France, AMSAT-Italia, JARL, SRR (Russia), and AMSAT-NA. JAMSAT, the RSGB and AMSAT-UK are expected to come aboard soon.

* DXCC processing status: The DXCC Desk reports the number of unprocessed applications at the end of February 1997 was 191 (23,172 QSLs). It received 252 applications (24,436 QSLs) for endorsements and new awards during the month. Applications being sent out at the end of February were received less than one month earlier. A few applications received prior to that time were in the process of being audited and had not yet been completed.--Bill Kennamer, K5FUV

* VHF confab reminder: The 1997 Southeastern VHF Society Conference will be held April 4-5, 1997, at the Atlanta Marriott Northwest in Windy Hill, Georgia (between Atlanta and Marietta). Jimmy Treybig, W6JKV--a leading expert on 50-MHz propagation--will be the banquet speaker. Steve Kostro, N2CEI, of Down East Microwave will conduct a clinic. Conference registration is $35, which includes a complete set of the Conference Proceedings. The April 4 banquet fee is $30. For registration information, visit the SVHFS web page at http://www.akorn.net/~ae6e/svhfs/ or contact Tad Danley, K3TD, 770-513-9252; e-mail k3td@amsat.org.

* Lucid gets award: The National Aviation Club presented its first annual Achievement Award March 12 to astronaut Shannon Lucid, who became familiar to many hams from her radio activities from the Russian Mir space station. She was selected "for her technical expertise, dedicated service, and pioneering spirit as a space shuttle astronaut." Lucid holds the record for the longest duration in space by a US astronaut and longest space flight by a woman. She becomes the first to receive the yet-to-be-named trophy that was to have been presented to Amelia Earhart upon the completion of her around-the-world flight in the 1930s. Lucid has flown on five shuttle missions including her record-setting mission to Mir last year. She holds a commercial pilot's license, with instrument and multi-engine aircraft ratings.

* Farquhar departs WTB: Michele Farquhar, Chief of the FCC's Wireless Telecommunications Bureau, has announced plans to leave the FCC effective in early April. In May, she is to assume a one-year term as president of the Duke University Alumni Association. Dan Phythyon will named acting Wireless Telecommunications Bureau chief.--FCC

* Grove Enterprises takes on RCMA Journal list: An issue of Monitoring Times will be sent to each former RCMA member for each issue due of the now-defunct RCMA Journal, according to an agreement reached between the RCMA board of directors and Grove Enterprises. RCMA members who have changed their mailing address should send their new address and RCMA membership number to: RCMA Mailing List, c/o Grove Enterprises Inc, Box 98, Brasstown, NC 28902; e-mail mt@grove.net.--Bill Mauldin

* Norm's acquires Alliance Tenna-Rotor line: Norm's Rotor Service, Frederick, Maryland--owned and operated by Norm Jeweler, K3LYW--has acquired all parts, materials and technical data for the Alliance Tenna-Rotor series of antenna rotators from the Genie Company. Norm's will provide support for the HD-73, U-100 and U-110 series rotors and control boxes. For more information, contact Norm's Rotor Service, 5263 Agro Dr, Frederick, Maryland 21703; tel 301-874-5885; fax 301-874-5887.

* St Patrick's Day event: On St Patrick's Day, March 15, starting at 0000 UTC, the Cork Radio Club in Southern Ireland will operate special event station EI5SPD on 40 20, 15, 12 and 10 meters. A commemorative QSL will be available.--Chris Maverley, EI6IA

* Morocco special event: Morocco is celebrating the 36th anniversary of the crowning of King Hassan II. Special event call signs CN36GI, CN36NL and CN36LU are operational on 80, 40 and 20 meters. QSL via CN8GI. A free certificate is available for working any two.--CN36GI

* 7Z1AB PACTOR mailbox open: The 7Z1AB PACTOR mailbox is back on the air from the US embassy in Riyadh, Saudi Arabia. The frequency is 14,071.3 MHz, USB. The mailbox has mail forwarding capabilities.--Barry Whittles, G4KUD

[snipped Han's blatantly pro-ARRL, pro-establishment advertisement
for all existing status-quo bullshit]

Hans,

Give it a rest ... the folks asked for what was required to use ham
radio in Mexico ... not for a treatise on the horrible mess that US
licensing has become because of the idiots at the ARRL.

All they need is a US Technician license (no-code) to exchange for
what they REALLY need ... a Mexican reciprocal license.

NONE of the US licenses are worth a DAMN for operation in Mexico.
The ONLY thing the US license is good for is as a "coupon" to exchange
for the Mexican license that they need to operate within Mexican
territorial
limits.

Please don't overload them wiht all of your pro-establishment rhetoric
and propaganda ... you'll only scare them away by making it seem like
it's far more difficult than it really is to accomplish what they said they
wanted ... HF SSB ham communications capabilities from Mexican
territory.

They didn't ask for the ARRL party line or any of the other stuff ...

Carl - wa6vse

The model Micor that you indicate is 100watts of low band 30-50MHz.
It is in one of 3 segments, 30-36, 36-42, or 42-50 depending upon
the -suffix of the TX or RX oscillator board.

The FIRST number is the power. 2)about 2 watts 3)10-30 4)30-50 5)50-70,
6)70-90, 7)greater than 90. These are all approximate! (depending on
band)
The second NUMBER is the band. 1)loband 3)vhf 4)uhf

: sq

Anybody ever monitor the MIR spacecraft telemetry signals? The weird
signal that would come overhead about every 100 minutes and shift from
Doppler. I can still remember that signal today.

Well, one reason that you may have such weird morse signals is that the
signals you're hearing could be two signals beating with each other. So
the odd letters are actually the sum of other letters. Like maybe there
are two stations, on 200 kHz and 255 kHz, summing together. Or it could
be the difference of two signals.

Come on now, You have to admit that the multi-tone attention getting video game noises you hear on some repeaters is not a courtesy tone. It's an attention getting noise maker no better than that silly roger beep. I had to laugh myself one day when this neighbor who was a CBer walked into my shack, heard the repeater's "courtesy tone" and said, "What kinda roger beeper is that?"

Sometimes I think we all need to laugh at ourselves a little and quit trying to take everything so serious. The Code vs No-Code and CBer comparison crap will go on forever, lets get on with the hobby and forget this argument no one can win!

How suprising. Mexico has (1) one license, Amateur Radio license.
Hard for the ARRL and its pawns to understand why the don't have
5 or 6 like the US does. Simple. Thats right, simplicity it is
called. They don't need 6 manuals/tests to get a "full" license.
They don't have a MRRL to make $$$ off the "structure" about to fall.

And you thought whores were only in Tiajuana? Try looking in Newington!

5752. Antenna Height vs. Powerlines

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-14 00:00:00 UTC
From: Douglas Gavilanes <gavilan1@earthlink.net>
Message-ID: <332A3372.E6F@earthlink.net>
Source record: 202462
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

I am considering installing a yagi for 10 - 40M (I currently have a vertical multiband 18AVT about 20' above ground) but have some concerns regarding the effect of power, phone, and cable TV lines that are pole-mounted and strung immediately above my yard's rear wall. The cable TV lines runs about 12 feet from the ground, the telephone lines run at about 15' and 20' above ground, and the 110/220 and high voltage lines run at about 25' and 35' above ground, respectively. These lines are about 30' due south of my home, and the position where I would like to mount my yagi, with a 10M AR-10 vertical just above it. The question is: What effect (if any) will these lines have on my ability to work skywave (domestic and DX) - will I be impaired to the south for RXing very weak signals, or will my TX be attenuated (or affected) in any way? How high should I place the yagi above the ground? I have seen yagis just above people's rooflines, and yagis 50 to 70 feet up in places around here. Are my concerns unfounded? I ask these questions to learn and benefit from the experiences of other hams, not because I have forgotten any antenna theory. Many an antenna has gone up, promising to perform as expected, only to be crippled by some environmental variable that wasn't considered as part of the installation. Obviously, I would prefer to mount the yagi just above my roofline, at about 15 to 20 feet (3 to 4 feet above roofline), but hate to think that all that "floating ground" 30 feet in front of my antenna will reduce the effectiveness of my installation.

Any replies are appreciated.

Hobby? Where does it say in Part 97 that amateur radio is a hobby?
Matter of fact part 97 says and is titled as a service. We are
mandated from the FCC in part 97 to be a service. Seems to me that
is where most hams fall down and or forget. We need to serve. We need
to serve our community, government, and fellow amateur's. We are
mandated to do so by the FCC.
There is room for all of us here. For people who like code, for
people who don't like code. Those who like digital communications,
Dx'ing, satelite work, repeaters, or just plain rag chewing and for
those who don't. In all of this though we must serve one another. This
is a grand thing we have here. We can communicate with people that we
would never ever be able to before. We can communicate in so many
different ways. True unity has diversity. There is room for all.
Yes amateur radio can be a hobby, but it is and will always be a
service. We need to keep remembering this and keep it in our hearts.
Professional people communicate because they have to and get paid to
do so. Amateur's do it because they love it. Let's unite in our
diversity and respect those who are different from us but share
in the endeavor of communicating. Be it with dot's and dashes or with
one's and zero's we need to serve.

Commercial, Rohn Mfg. Co., triangle tower.

Size at base(each side) is 14' 7".

Wind loading at tower top with 1/2" ice, 72 SQ. ft.

I purchased tower NEW, but it now is 4 years old, never installed because of an injury, base is tapered to 100 ft level, then last 40 ft straight sections.

This is a heavy duty commercial radio tower that has been certified and stamped by a Washington State Professional Engineering Firm. (required for a building permit)

Serious inquiries only, cash sale only, no trading, etc.

Email me for initial contact.

With all the chatter about CW these days I just have to share a story that I heard the other day.

Seems an author fell ill, became totally paralyzed, except for his left eye. He could blink his left eye. Paul Harvey was reporting that this individual had just released his latest book, over 300 pages. The entire book was written one letter at a time. The author signaled morse code with his left eye while a person decoded the signaling and put it to paper!

I wish I knew the authors name! I'm sure you could verify this story by contacting any local radio station that carries Paul Harvey.

And you say that morse code has lost its place in communications!!!!!

Regards Don WB6LPJ CW spoken here

>>No-code Tech is instrumental in bringing new people to the hobby.

I am involved with a group that handles well over 5,000 roadside assistance calls annually on their repeater system (W6FNO) - without knowledge of Morse code.

American Red Cross work in the Southern California region occasionally involves Amateur Bands...with no Morse code used.

The Military Amateur Radio Service has seen fit to do away with Morse code requirements.

I do not see my "Technician" Amateur Radio License as an "entry-level" license...I see it as an extension of my public service work - a functional tool with which to communicate.

And plain English does the trick 100% of the time.

I am normally a lurker, but I will add something here:
But this kind of thing goes on the bands too. When my kid finally got interested in Ham radio, I got him into the books, he was really excited. He asked me to allow him to listen
on the radio. That killed it for him, two days in a row we heard nothing but a bunch of operators bickering, childish behavior, carriers over carriers, and lots of foul language. He put the books away in the shelf, and went back to drawing on his computer.
Hasn't been interested since.
So what you see here reflects a percentage of the population out on the air.

Maybe you can explain why it is audiable for miles around, and
why the code is regular, lots of letter A, N and P (.- / -. / .--.) I
only get letters in no particular order, followed by a key down break,
then it repeats very similar. Sounds uneven, like a hand keyer. If it
were an arcing transformer, would it have such great range and would the
pulses be so regular and repeating? It still seems odd..............sq

Now THIS is something that I hadn't thought of. It comes over
on all shortwave, medium and longwave bands. Any signal at 455khz would
bleed over to the IF strip and be amplified and mixed. This might be it,
a transmission at 455Kc, but why? What is the significance of the
repeated letters over and over, 24 hours a day? I've only heard it go
down once in the last two days, and then for only a few hours. I've been
losing sleep myself monitoring it. I have the message locked in my
memory now forever. :-/

Right!!!!......as rediculuous as you suggestion is, it does remind me of
one of reasons why prohibition was started in 1920. Although the
temperance movement had been around for years, with black-clad women
waving bibles, and speaking of the evils of the demon rum, mainstream
politicians paid little attention to it until they saw it as a way to
control Irish and Italian immigrants. By imposing prohibition, these
politicians saw it as a means of controlling the flow of booze to certain
immigrant groups which would bring them under their control and they'd
make a buck or two in the process. I don't think the FCC had the same
thing in mind with code.

......Fred

There has never been anything like this in this area previous to
now. I'm not sure if anyone else is/has complained, but Iowa is a very
non-technology place. Most people wouldn't know what they were hearing,
nor would they know how to contact authorities (like the FCC).

> Arcing power lines often clean up after a good rain, which might wash the
> arcing semi-conducterrs off the insulators: does the problem seem to get
> better after a good rain?

The problem showed up out of the blue, on one of the nicest of
our early spring days. It had been raining and dreary, then it got clear
and dried up, then "boing" here it was. Noticed it when I was listening
to a daytime shortwave broadcast. I've been listening to it ever since.
It suddenly appeared, and hasn't stopped. Initially, it only ran for
several hours, then off for a while, then back on. Now it is on for more
than 20 hours a day minimum! It appears to be similar code, repeating,
separated by key-down long pulses. I'm stumped. I decoded a bit of
it as "cnne e npt e e" and it repeated a couple of times, then changed
to "pnne e npn e e" and that repeated a few times. I'm not good with
morse code, but that much I was able to decode for sure, as I recorded
the signal, then played it back slowly as I wrote down and VERIFIED the
code. All signals seem to be standard international morse, not any
dit dah variations that don't conform to morse code. It does seem to
me to be a bit sloppy tho, and sounds hand-keyed not computer generated.

sq

(I'd be happy to upload a long 10 minute or so recording of this junk.
It would be a big file tho, several meg even at 8bit 5Khz resolution...)

Spark-gap transmitters do! You get real! I'm an engineer, and
I like to think I know what I'm talking about. Lundgren suggested that
the signal might be broadcast at or near the IF frequency of the radio,
and thus is piping through the IF amp strip like a bad bean burrito
through your intestines! That might also be a possiblity. However, it
does sound like a spark gap transmitter to me, as the carrier looks like
a rasp-wave on my scope. Very nasty. I wish I had a DF rig, I'd hunt
the source myself. I may beg/borrow one and do just that.

> I've heard it as a steady buzz before at the exact same frequency (60 Hz).

Steady buzz I hear all the time, from the flybacks of my next
door neighbors TV (big OLD console, never turns off). This is not a
steady buzz, but a pattern. Not a random pattern, but a pattern. Not
intelligence, yet not random either. Very strange indeed.

> It sounds like every case of electrical feedback I've ever heard before. No
> morse code transmissions sound like that.

I have decoded morse code from it. It appears to be some kind
of attempt at morse communication. Perhaps some ham just got his license
and doesn't know his rig is spamming the airwaves, however, I was not
able to make out anything that looks like a callsign from that code, if
it is code, just letters in sequence with pauses between some of them.

Were you able to decypher letters from what you hear, or am I
just reading into it? Some others reported hearing morse patterns in
the .wav file, so perhaps I'm not totally cracked.....sq

My friend's father, an old Merchant Marine "Sparks" suffered a stroke that left him paralyzed and couldn't speak. I brought a key and oscillator to the hospital and he was able to send CW at about 10 WPM while I copied to paper. He passed away after ten days in this state but he and his family were very relieved that they could communicate with him during his final days.

There is also the story of the USS Pueblo and Viet Nam POWs who communicated by blinking CW messages while being filmed by their captors.

> several times

Actually, several people have written to say it was "definately NOT morse code", however, I'd decoded the same stuff you did, only I can't find any intelligence in it. It's morse code alright, but what does this mean? Why is it repeating, why does it change every once in a while, and why is it suddenly on, and going 24 hours a day? Why can't I find a fundamental between 150Kc and 30000Kc? Why does it buzz like 60Hz noise, and why does the scope show the IF wave to be a hash-wave?

> because this is repetative, I'd be very surprised if it was hand keyed
> for 24 hrs per day! I'd look for some type of aeronautical or marine
> navigation beacon on your area which is not properly adjusted.

That's gotta be it! However, slight timing variations make me believe it was hand-keyed. Does it sound like old style mechanical keying then maybe? It doesn't sound even enough for computer, ya know?

> I use these beacons while I'm flying, and the tone is for tuning, the
> ident (which is done by an automated system, or by an encoded rotating
> wheel in the old days) is for ensuring the right navigation aid is
> selected before using it. How close are you to an airport? Let me know.

You're gonna love this. I'm so close to the airport, I smell jet fuel when I go out in the morning (when the planes start taking off in the early morning). :) About 1 mile from the control tower. An airplane once crashed one block north of my house. I'm that close!

This is starting to make sense. I'll contact the airport and see if they can help me out. I have the number directly to the tower since I need to call in to clear airspace when I fire a 40 watt YAG laser for promotions at the local lasertag arena. I'll call that number.

Thanks! You've been a great help. I'll bet the navigational beacon has retuned and is broadcasting at or near 455kc and is thus affecting the IF of all my AM and SW radios. This now makes sense.

sq

(I'm glad you wrote, I'm fairly certain you've solved the mystery.....)

It sounds like a leaky power line near you. The .wav file specified
appears to be a loop (the same information repeated). If it's not, the
arcing pattern is very strange (because it's repetitive). It's very
unlikely this is some intentional transmission, amateur or otherwise.
Spark gap is not only illegal, but is extremely inefficient and requires
some pretty amazing electro-mechanical gear. This really doesn't sound
like spark, anyway. I'd call your local power company - they have
equipment that can be used to locate arcing on the lines. If they can't
find it, and you're sure there's some intelligence to it....well, maybe
the FBI DOES have an X-Files office?

Good luck...

Yet neither of these stories offers any justification
to mandate CW testing of amateurs to get on HF.
What do you expect, amateurs to become hospital
attendants to help write books, or to be POWs if
the case arises. No one says that CW has NO
uses, but here are none that can be shown to
sustain the continuation of mandated CW testing
as an amateur REQUIREMENT. Remember, no one
is saying CW use should end or that new hams shouldn't
learn and use it if they want. There's just no compelling
reason to mandate the testing anymore and the two stories
above, while interesting, offer no support for amateur
CW test requirements.

>-- 73

The ship that was nearby was the 'Californian'. The operator of the
Californian had radioed the Titanic to warn them of icebergs in the area.
The operators on board the Titanic had a backlog of messages to be sent
from the passengers to friends and family on shore.
Wireless was a novilty to most people and they where getting a kick out
of being able to send messages. The radio ops on the Titanic did relay
the orginal message of ice bergs to the bridge, but the captian chose to
ignore it. When the operator on the Californian did not get a reply from
his message, he sent it again. The operators on the Titanic were getting
annoyed with him breaking in on their transmissions and sent back a
message for him to 'shut up and stop interfering'. He did just that, he
turned off his wireless and went to bed, thus never hearing the distress
signal when it went out from the Titanic. Another ship, the Carpathea
(sp?) about 40 miles away heard the call, but by the time it arrived, the
Titanic had gone down. Had the Californian heard the call, most lives
would probably been saved.
One of the Titanic radio operators survived and returned to England. He
was an active ham operator and passed away some years ago, but I don't
remember his call.

HAMFEST/COMPUTERFEST CALENDAR 1997 - NORTHERN ILLINOIS
last updated February 8, 1997

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale and ARRL for providing some of the information.

MARCH 1997

Mar 2 (Sun), Wheaton, IL - Giant Computer show, DuPage County Fairgrounds. County Farm & Manchester Rds., Wheaton, IL. See notes at the end of this article.

Mar 9 (Sun), Orland Park, IL - Giant Computer show, Orland Park Civic Center. See notes at the end of this article.

Mar 9 (Sun) - Waukesha, WI. SEWFARS Swapfest. Waukesha County EXPO Center, Waukesha, WI 8:00 AM Talk-in on 146.820 pl 127.3 $4.00/$5.00 Ham Radio. Computers. Electronics. Amateur License Exams. For information Contact SEWFARS, PO Box 102, Delafield, WI 53018. 414-650-0724

March 23 (Sun): Grayslake, IL - LAMARS hamfest, Lake County fairgrounds. All indoors. Admission $5 at gate, free parking. Setup at 6 AM, doors open at 8 AM. VEC testing 9 - 12. For Information contact LAMARSFEST, 650 Green Bay RD, Lake Bluff, IL 60044. (Small fest, but usually interesting - AJ9S.)

APRIL 1997

Apr 13 (Sun), Chicago, IL - CARC Ham Auction. DeVry Tech, 3300 N. Campbell Ave. Will auction your electronic goods at this auction if you bring them in before 12 noon. All goods subject to 10% donation. If purchased back by the sell, then 5% will be due. All sales as-is and final. Info: Dean (708)331-7764 or George (312)545-3622, days.

Apr 19 (Sat), Wheaton, IL - Giant Computer show, DuPage County Fairgrounds. County Farm & Manchester Rds., Wheaton, IL. See notes at the end of this article.

Apr 20 (Sun), Orland Park, IL - Giant Computer show, Orland Park Civic Center. See notes at the end of this article.

Apr 27 (Sun), Arthur, IL - Moultrie ARK. Contact Ralph Zancha, WC9V, tel (217)873-5287.

MAY 1997

May 3 (Sat), Cedarburg, WI - Ozaukee Radio Club Swapfest, 8:00 AM. Circle B Recreation Center, Intersection of HY 60 and Ozaukee Cty I. Talk-in on 146.37/97 and 146.52 $4.00 Amateur License exams. Amateur Radio. Computers. For Information Contact O.R.C. Swapfest Committee, W58 N985 Essex Dr, Cedarburg, WI 53012-1439 or call Gabe at 414-377-2784 between 6:00 and 8:00 PM.

May 4 (Sun), Sandwich, IL - DeKalb KARK Hamfest. Sandwich Fairgrounds at Suydam and Gletty Roads. Admission $6. Overnight camping on grounds $10. Talk in 146.73 or 146.52 MHz. Info: Bob Yurs, N9ZNA (815)895-3219 or n9zna@aol.com. Web page: www.tbcnet.com/~jleonard/hamfest.htm (Good, medium sized fest which grows each year. Good restroom facilities. Few commercial exhibitors. - AJ9S).

May 10 (Sat), Peotone, IL - Kankakee Area Radio Society hamfest. Will County Fairgrounds. I-57 to Peotone exit 327 (east). 6 AM. Admission $4. Talk in 146.94 MHz. Info: Willis Bowser, K9IFO (815)472-2079.

May 18 (Sun), Orland Park, IL - Giant Computer show, Orland Park Civic Center. See notes at the end of this article.

May 25 (Sun), Chicago, IL - Chicago ARC. DeVry Tech, 3300 N. Campbell Ave. Admission $5. Info: (312)545-3622 or (312)486-6823.

May 31 (Sat), Springfield, IL - The Sangamon Valley Radio Club. Illinois State Fairgrounds. This Hamfest is "rain or shine" with over 100,000 square feet of covered and lighted fleamarket space, plus indoor facilities. Info: Don, W9EBK at 217-789-4519.

JUNE 1997

Jun 1 (Sun), Princeton, IL. Bureau County Fairgrounds. Free parking. Info: Debbie Burton, N9DRU, 1153 Union St., Marseilles, IL 61341-1710, tel. 815-795-2201 (Usually an excellent hamfest, with sellers from Illinois, Iowa, and Wisconsin. - AJ9S.)

Jun 8 (Sun), Wheaton, IL. Six Meter Club of Chicago. DuPage County Fairgrounds, 2015 Manchester Rd. 7 AM. Admission $5. VEC tests 9 AM - 1 PM. Talk-in on 146.97 MHz (107.2 PL) or 146.52 MHz. Info (708)442-4961 or contact Joe Gutwein, WA9IRJ, (630)963-4922.

Jun 8 (Sun), Orland Park, IL - Giant Computer show, Orland Park Civic Center. See notes at the end of this article.

Jun 22 (Sun), Wheaton, IL - Giant Computer show, DuPage County Fairgrounds. County Farm & Manchester Rds., Wheaton, IL. See notes at the end of this article.

JULY 1997

Jul 13 (Sun), Sugar Grove, IL - Fox River Radio League, Waubonsee Community College, Rt 47 at Harter Rd. 6 AM. Admission $5. VEC tests 10 AM only. Talk in 147.21 (pl 103.5 & 107.2 Hz) Info: Diana, WD9API (630)293-7485.

Jul 26 (Sat), Pecatonica, IL - Rockford Amateur Radio Assoc. (RARA) Amateur Radio and Computer Hamfest. Winnebago County Fairgrounds, about 15 minutes west of Rockford, Il. Talk in on 146.61 MHz, 114.8 Hz PL. This will be in the main exhibition hall with room for tables. Ham Radio Vendors, Computer parts vendors, tailgating, food. Code receiving contest, Throw the Radio contest, Great door prizes. For table reservations contact Mike Anderson at (815)397-4304 or mander5@ix3.ix.netcom.com. For any other information contact Marsha Plasters at (815) 399-9233 or wa9ffl@aol.com.

AUGUST 1997

Aug 16 (Sat), Franklin, WI - 7:00 AM, C.A.R.S. Crystal Ridge Ski Lodge. Talk-in on 442.200+ pl 100.0 / 146.52 simplex $4.00/$5.00 Radios. Computers. Electronics. Concessions. Door Prizes. Free parking. Free camping. Large Tailgate selling area. Electricity available, $1.00. Contact C.A.R.S., PO Box 325, Franksville, WI, 53126-0325. 414-325-7427

Aug 16 (Sat), Wheaton, IL - Giant Computer show, DuPage County Fairgrounds. County Farm & Manchester Rds., Wheaton, IL. See notes at the end of this article.

Aug 24 (Sun), Woodstock, IL - Tri-County Radio Group. McHenry County Fairgrounds, Rt. 47. 6 AM. Admission $5. Talk in 146.52 MHz. Contact Bob Grosse, N9KXG. Info (voice/fax) (847)658-1678. http://www.angelfire.com/il/tcrg/ (Smaller, but fun fest. - AJ9S)

SEPTEMBER 1997

Sep 27 and 28 (Sat & Sun), Grayslake, IL - CFMC's Radio Expo 97. Lake County Fairgrounds, Rts 45 & 120. Admission $6. Talk in 146.76 MHz. Info (708)457-0966. (This is probably the biggest and best hamfest in N. Illinois - AJ9S).

NOVEMBER 1997

Nov 15 & 16 (Sat & Sun), Fort Wayne, IN - Fort Wayne Hamfest. Indiana ARRL State Convention. Allen County War Memorial Coliseum Expo Center. Sponsored by the Allen

County AR Technical Society. Admission $5. Parking $2.
www.pipeline.com/~dagagnon/. Info: (219)484-1314.

NOTES - Computer Central and Giant Computer shows

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $5. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123.

keep the code, educate the applications. what is easier to build after learning
the important theory behind it? a cw transceiver or a phone xcvr or atv counterpart?

while the wpm req is probably high for today's standards, code is a great thing
to have knowlege of and should be a required part of the licensing system. perhaps
not such a block to the hf bands but should be in the mix. i personally frequent other modes of operation with atv being my latest project for my multi-cast repeater system. still yet, cw come into play whenever a minimalist/survivalist notion comes about. i have built [as countless others] a cw transceiver that is powered by alternate energy. it has 4 rechargeble AA batts that are charged either by sunlight or wind power. this really sparks the interest during field day and open houses at the club meetings.
>
>
> Morse code is the 90's equivalent of smoke signals. It's a quaint and
> interesting skill, but has no longer has any practical value. The fact
> that it has been abandoned by every other communications entity should
> tell you something.

not so, just about every security oriented solution has cw as backup. i do advocate relegating cw to backup as it's major role but as important a requirement as any other. what happens in the thousand what-if scenarios when a homebrew min cw xcvr is the last means of communications?
>
> We all lament that it's so hard to get young people interested in ham

> buggy in a space shuttle world, so it should shock no one that they're

> not listening.

the code deciphering programs on my BBS are among the most popular.
kids still like that "secrect code" idea. i agree that it should not
keep them from certain bands and such but still should be a requirement
along with more intense theory.
>
> If we were genuinely interested in perpetuating this hobby, we would
> dump CW outright

i think this would be a giant step in the wrong direction. while i
advocate revamping the code requirements/restrictions, i still feel it
is important.

> and shift focus towards computers, packet, ATV, and
> satellite communications. See a theme here, ladies & gentlemen?
>
i have been a computer pioneer for over 20 years, i can't wait to get
all the new and improved stuff but would be "just another appliance
operator" without the experience and training on all the old antiquated
hardware, software, programming concepts.

> For the record, I am a ham & got my ticket long before no-code, so I'm
> not playing sour grapes here.
>
i'm new to the ham radio world but not to the fun stuff it encompasses.
years of 11 meter listening/disecting sparked while vhf lo/hi police
band fueled the fire. a ham came to the electronics repair store i
frelance for and suggested i take the exam that was being held in 10
days. they would love to have me he said. well a trip to the radio
shack 30 minutes away brought me a no-code manual, a general manual, and
a 4 tape code course.

with no previous code training [except for the morse code chart on my
walkie talkies as a kid!] i came away with a general class ticket in one
test session.

i guess my point is that if someone wants something and is on fire for
it, he/she will do what is required to get it.

if they drop the 20wpm before i upgrade adv/extra, that will be fine.
if not i will be ready for that too.

> No biggie. Just my opinion.

absolutely, no need for flames in this group. plenty of non-hams and
prospects reading here to see what it's all about.

Why don't you try asking this in alt.conspiracy ? You'll probably find a
much more receptive audience there. Personally I think conspiracy
theories are a waste of everyones' time.

Hello:

I took the rig(IC-706) have no change to government to get
approval but failed. The officer said that my rig's receive frequency
must lower 146Mhz. I removed D60 and
installed it at D58. The transmit frequency can change to 144-146Mhz but
receive change
nothing.I removed D58 and install it at D57.The HF transmit frequency
have little
change and VHF within 144-146Mhz.The receive frequency still have no
change.I think that the D57,D58,D59,D60 just change the transmit
frequency.I think it will have some
diode to change receive frequency. Would you send me some information
about the diode
that the microprocesser use to change frequency?
If I can not change the receive frequency that suitable to
grovernment, my rig
will become a rubbish.I spent about 4 months and HK$7300 for it :-(.
Best Regards, Freeman(XX9ER)

5790. RF exposure question

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-14 00:00:00 UTC
From: itvace@wam.umd.edu
Message-ID: <5gc6lk$chq@dailyplanet.wam.umd.edu>
Source record: 202521

I would like to get the formula to calculate RF exposure, if someone could help me. I would like to get this formula for a couple of reasons- I work with microwave transmission equipment, and I am looking over some information about a cellular-type wireless modem system made by a company called Metricom.
I wasn't particularly concerned about RF exposure from Metricom's "Ricochet" wireless modem, until I went to Metricom's homepage (www.metricom.com), and they had a "Health and Safety" page about the Ricochet system. I figured, what the heck, let's see what they say. As I read it, it struck me that they only discussed the RF exposure from the transceivers that are mounted on light poles by the street. Looking into it a little further, I found out that the modem that is connected to your computer has the same power (0.6W) as the ones by the street, and are, of course, a lot closer to you. Working backward from the level that they said they got, assuming that they were measuring the level from 50' away, my calculations said that somewhere between 2-3" away from the antenna, you would be over the ANSI standard that they were quoting. Again, I was making some assumptions, and doing a "back of the envelope" calculation (power increases by 6dB when you decrease the distance by 1/2), so I'm not really confident on my results, which is why I'm interested in getting the formula.

TIA for any responses.

Overhead AC lines act as antennas, and on the MW band you can indeed hear standing waves come and go for miles. This can really fool you when tracking noise on MW, which is why you have to switch to higher bands periodically.

Your message is most definitely a man made sequence, but there are many kinds of these and it might or might not have any content based on the supposed or actual Morse characters heard.

>a transmission at 455Kc, but why?

It might be at that, but your .wav file is kind of unique. I don't think
I've ever heard anything like this. You have a real good mystery here.

You are assuming that the signal is Morse code. While it sounds like it,
it is not an ID from a radio beacon. It has too many letters. Some more
advanced beacons like the ones on oil platforms or fishing boats broadcast
repetitive data streams that can sound a great deal like Morse, but these
are typically very low powered.

At least in your file, the sound is that of raw AC. Absolutely raw,
unfiltered, 120 Hz and up. This might be a sign controller or
malfunctioning traffic light. Drive around your immediate neighborhood
until you can peak the noise at 30 MHZ, then switch to the FM radio and
keep driving until it is loud there as well. This will put you within a
block or two. If you can scrounge a 440 MHz ham radio, try this because
it'll put you within a few feet. You can see if you can correlate any
visible blinking or arcing with the 'message' content.

Otherwise look for a radiolocation beacon with a REALLY bad spurious
emission.

now that paragraph is a flame. you warn that procoders are 'going' to
do
what you have already done. cw is not my preferred mode of
communicating
but i do feel it is and will always be an integral part of
communications.
the no-code ticket did alot to open ham radio to those not interested in
cw.
many delve into the code and upgrade because their club displays a
positive
attitude toward the code and the incentive idea. rather than treating
it
as an impossible obstacle, it's shown to be a fun and still useful part
of
radio. there is a way thru the code! i'm 29 and went from no ticket to
general class at one test session with 10 days to learn the code. i did
it
because i really, really, wanted it! so i did what was required to
reach it.
if the code is gone when i go to get my adv/extra ticket that is
wonderful,
if not, then i will be ready for it.

```
In all honesty, AM on 75 and 160 lead me to getting a license.
In 1973, I had a BC-312-D and listened to the AMers because I
didn't know what a BFO is. They were seen in my eyes as having fun.
They sounded good and they were loud. Tuning didn't matter either.
Plus or minus 5 KHz on a vernier dial and I had something to listen
to. I have become an avid listener 24 years later and have lead
many others that way. AM is not outdated at all, look at who uses
it everyday and not going to other "more efficient modes" CW is less
efficient, in terms of throughput, than speech. That is why military
and maritimes have dropped CW because of efficiency and technology.
Speech is more universally understood, no matter the transmission mode.
Maybe an English test should replace CW, because most negative comments
on this subject show a lack of reading comprehension and a sense of
humor. These combined with some imagination could make you laugh at
just how stupid words can be. Some people too! : }

AM should stay as a beacon to non-hams that some of us have fun on
the radio : }
Sideband does have its fun frequencies too but most any AM frequency
can attract a non-ham, by showing different and INDEPENDENT operation.
Why be like everyone else?

> How about that outdated/inefficient AM ? and why is it called a "roger
> beep"... I think you had part of it correct ("over" or "K" beep sounds
> more like it).
>
> Curt - K8AI
> (elite radio op...)

Right on!
I have enjoyed this discussion. It shows that some of you guys
just can't see how stupid you look when you can't laugh at facts : ((
It is not human nature to be angry at someone who points out little
quarks with certain behavior most hams exhibit. A beep is a beep is a...
Look back on the postings, it is funny to me : }

NEW MEMBERS.

A warm welcome is extended to the following new members approved at the Council Meeting on Friday night 14 March 1997.

VK2AO Dennis PEAKE of Colo Vale
VK2EYC lan D McKAY of Killara
VK2IEQ Paul JENNI of Drummoyne
VK2JPR Glen F. ENGLISH of Mt Kuring-gal (Welcome back!)
VK2AYD David PILLEY of Wauchope
VK2WE Kenneth MATTHEWS of Tanilba Bay
VK2XN Wayne FOURACRE of Narrabri
VK2PB William PAULL of Narrabri
VK2EAU Michael HALLINAN of Coleambally
VK2WHD William DOUGALL of Dunedoo
VK2VCR Anthony WILLIAMSON of Goulburn
VK2KXN Nicholas McLEAN of Russell Lea
VK2ADG Robert LOFTUS of Northmead
VK2ASW Donald POLLARD of St Ives
VK2BKP John PICKETT of Wamberal
VK2TUF Brett COADY of Lane Cove
VK2VUB Leo BUTCHER of Cessnock
VK2KWY David HENDERSON of Corrimal East
VK2KKT Karl TOMSON of Parramatta
(Associate Member) Jan Jozef OKSIUTA of Doonside

We hope you will have a long and happy association with the WIA.

--Eric Fossey VK2EFY, Divisional Secretary.

TRASH & TREASURE SALE

Because the last Sunday in March is Easter Day, the March Trash & Treasure Sale will be held on the Sunday After Easter - that's the 6th of April.

DIVISIONAL EXAMINATIONS

The next examinations will be held at Amateur Radio House Parramatta next Sunday 23rd March 1997. Candidates who have lodged applications are requested to report at 12 noon, and the exams will start as soon after that time as possiblem but no later than 12.30pm.

Please apply to the office for the necessary forms. Applications close on Thursday 13th March. Acceptance cannot be guaranteed for any applications received after that date.

--Submitted by Eric Fossey VK2EFY - Divisional Secretary.

THE AFFILIATED CLUBS NET IS BACK

The Affiliated Clubs Net is to be resumed on the third Wednesday of the Month commencing next Wednesday 19 March at 7.30 pm EST on 3.595 MHZ plus or minus QRM.

So clubs I hope to see at least one and possibly more from each club on air.

--Ken Westerman VK2AGW, Affiliated Clubs Officer.

ATTENTION BROADCAST TEAM

The Broadcast Roster for the next three months will be drawn up soon, so please advise Pixie VK2KPC at the Divisional Office of any dates that you will not be available.

WICEN NEWS

A new addition to the WICEN calendar is the Tom Quilty Horse Enduro, run by the eponymous Dan VK2GG, on Saturday 7th June; this is a 24-hour event, midnight to midnight.

Tomorrow is the Hunter meeting, and it will feature a talk by Telstra. Next weekend is the VRA Mid Year Conference, at Wombeyan Caves, and WICEN will be well-represented here.

On 13th April is the Forster Triathlon. This is an all-day event, early morning to late evening, and about 25 operators are required for this event; food, drink, fuel and T-shirt are provided. Operators will need to bring equipment for 2m and 70cm voice, and will also need to contact Steve Pettet VK2KXQ, phone number (065) 55-3177, or PO Box 122 Forster, for further details. Following this is the Watagan Mountains Car Rally, over the weekend of 19-20th April, for which Andy VK2XRX is the contact; around 20 people are required for this exercise.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets.

If any region has any news or info they would like published, then please contact the Publicity Officer. If further information about WICEN (NSW) is required, please contact the State Coordinator, Alan VK2YYJ, on 015-097-217.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

DX NEWS

MADAGASCAR - 5R8KH, 5R8DG and 5R8EW are now active on SSTV.
Keep a look out on the SSTV calling channel, 14230 kHz.

ZAMBIA- Brian 9J2BO is active on 6 meters.

ST. MARTIN - Bob FJ/K1YJK will be active from St. Barthelemy Island March 17 to 31, on 160 through 10 meters, mostly CW. Look for him on the low end of the CW band edges. He will also be active on 20 through 10 meters SSB in a limited manner, in the CQWW WPX SSB Contest on 29th-30th March.

JUAN DE NOVA ISLAND - FR5ZQ/J is now active on CW and SSB. His length of stay, and QSL route, are unknown at this time.

GUANTANAMO BAY - KG4AU has been active as a Multi Op/All band entry in the BARTG Spring RTTY Contest this weekend.

CZECH REPUBLIC - LX1NO and others are planning to be active from OK-land as a Multi/Single entry in the CQWW WPX SSB Contest.

ST. HELENS - Ray Hudson ZD7RH is active on 20 through 10 meters with an FT 101E and wire antennas.

BURKINA FASO - Dan N9XAG, currently active as XT2DP, will go QRT in either April or May.

--ARRL DX Bulletin 13, dated 13 March, 1997

SPACE NEWS

RS-16 SATELLITE IN ORBIT!

A new Russian Amateur Radio satellite--designated RS-16--was launched recently, with an average orbital altitude of 460km and having a 3000km wide footprint on Earth.

RS-16 is expected to be a Mode A (2 meters up/10 meters down) satellite, like RS-10 and RS-15. It's the first Russian satellite to have a 70-cm beacon, but that beacon is not yet operational. Beacon frequencies are 29.408, 29.451, 435.504 and 435.548 MHz.

When the transponders are operational, the RS-16 frequencies are expected to be: uplink, 145.915 to 145.948 MHz; downlink, 29.415 to 29.448 MHz. Transponder power output will be 1.2 or 4 W. Orbital elements and additional information will be announced as they become available.

LITTLE LEO BATTLE MOVES TO NEXT LEVEL

Proposals by the low-Earth-orbiting satellite industry--the so-called "Little LEOs"--to share spectrum with Amateur Radio at 146, 220 and 440 MHz were among those turned in this week to the FCC advisory committee that's planning for WRC-97. The report of Informal Working Group (IWG) 2A, which wrangled with proposals involving mobile-satellite services, includes the Little LEO's controversial "flexible allocation" plan to share spectrum with amateurs and others--but only as an annex to the report that also includes the objections raised by other participants, for consideration and disposition at a higher level.

As part of their flexible allocation strategy, Little LEO interests last month proposed including 219-225 MHz in their list of desired allocations for the nonvoice, nongeostationary (NVNG) mobile-satellite service. Little LEO targets now include 146 to 148, 219 to 225 and 430 to 450 MHz. The ARRL and AMSAT were among those objecting.

IAC Chairman Scott Harris told participants at the March 5 meeting that the committee was only advisory, and that the government will make the final decision on its ultimate WRC-97 positions. The Final Report of the Industry Advisory Committee is expected to go to the FCC in about two weeks.

FCC PROPOSES CHANGES IN SPREAD SPECTRUM REGS

Responding to a 1995 petition from the ARRL, the FCC has proposed to adopt changes in its Amateur Service rules governing spread spectrum operation. The League's petition asked the FCC to relax its rules to give Amateur Radio more opportunities to contribute to the development of spread spectrum techniques.

Specifically, the League sought to have the FCC relax restrictions on spreading sequences and asked for greater flexibility in spreading modulation. In response, the FCC now has proposed to drop rules restricting amateur stations to transmitting only frequency-hopping and direct-sequencing spreading techniques. As requested by the League, the FCC also has proposed to require automatic power control for spread spectrum transmitters, to ensure use of the minimum power level needed to carry out communication.

The FCC also went along with the League's request to permit brief test transmissions using spread spectrum and to allow international spread spectrum communications between amateurs in the US and those in countries that allow hams to use spread spectrum. The current rules allow only domestic communication.

The FCC said the rule amendments would "increase spectrum efficiency and allow amateur operators to contribute to technological advances."

CLUB NEWS

WAVERLEY AMATEUR RADIO SOCIETY

Our next meeting is on Wednesday 19th March, being the 3rd Wednesday of the month. Jim Ayling, VK2KQ, will describe the gear he has developed and his experiences as part of the WICEN team at this weekend's Triathlon event at Orange. Doors open at 7:00 pm and the meeting starts at 7:30. All interested in Amateur Radio are invited to come along and see what the society is up to.

The first Saturday afternoon of each month is project day, so drop in on April 5th from 1:30 onwards and get involved in some practical work or just come along and socialise. Project day has proved most useful to a number of members by helping them fix rigs with faults or just to receive assistance in the operation of complex modern rigs.

The Society's clubhouse is located in Vickery Avenue, Rose Bay, off New South Head Road, next door to the Rose Bay RSL Club, where a number of members gather for a meal before the meeting.

Just a reminder that our Internet web page, maintained by Ben Buxton, VK2XUF, is regularly updated. It includes photos taken by Raffy Shammay, VK2LRF, of many of our members, together with their Email addresses. You can search for "Waverley Amateur Radio Society" or use the links from the WIA or other local society pages to find us.

--Simon Buxton, VK2EII, Club President

VHF DX GROUP

THE VHF DX GROUP IS AN INFORMAL ASSOCIATION OF ACTIVE VHF AND UHF OPERATORS. THE GROUP WAS FORMED TO PROMOTE NON-REPEATER ACTIVITY AND TO HELP JUSTIFY OUR GENEROUS ALLOCATIONS IN THE VHF SPECTRUM AND ABOVE. THE NEXT MEETING OF THE VHF DX GROUP WILL BE NEXT TUESDAY AT AMATEUR RADIO HOUSE, PARRAMATTA, STARTING AT 7:30 PM,

AT THE MEETING WE WILL BE BE HEARING MORE ON AIRCRAFT ENHANCEMENT PROPAGATION FROM GORDON MCDONALD

VK2ZAB, FOLLOWING HIS INTERESTING PRESENTATION ON THE TOPIC AT THE WYONG FIELD DAY.

THIS WEEKEND IS THE JOHN MOYLE MEMORIAL FIELD DAY. KEEP A LOOKOUT FOR PORTABLE VHF STATIONS NEEDING CONTACTS, AND ESPECIALLY A MAJOR EFFORT BY MEMBERS OF THE BRISBANE VHF GROUP WHO WILL BE OPERATING PORTABLE ON 144, 432 AND 1296 MHZ FROM A FIELD DAY SITE NORTH OF BRISBANE. THIS STATION SHOULD BE WORKED AS FAR SOUTH AS SYDNEY.

DON'T FORGET THE TUESDAY ACTIVITY NIGHTS ON 144MHZ AND THE GROUP'S SUNDAY MORNING NET ON 146.550MHZ FM AT 11.00 AM.

--SUBMITTED ON BEHALF OF RICHARD SOULIE, VK2ARS

HORNSBY & DISTRICT ARC.

The next meeting takes place, on the 25th. March 1997, at 8:00 pm. Meeting place is, Mount Colah Community Centre, Pierre Close, Mount Colah. (Near the Eastern Entrance to the Railway Station). This is the formal monthly meeting, taking care of all business that has arisen, since our last formal meeting.

When all business has been taken care of, a Lecture by VK2NJC, Colin Craigen, a member of an investigation team, in the U.K. to identify, and generate interference, to the Radio Direction Finding Beams Transmitted by the Germans in 1939. These Radio Direction Finding Beams, were used to guide the German, bombers to London. Lecture is with video supplement. Remember the T.V. Series " The Secret War."

TRAINING CLASSES: The cutoff point may have been reached, but still ring Tony, you never know your luck, it may be extended. The training classes are held each, Thursday evening at 7:15 pm., in a hall at the corner of Palmerston Rd. & Burdett St. opposite the Hornsby Hospital. For more information phone, Tony VK2BTL on 9487 3383.

The Club conducts, a net every Monday night, at 8:00pm. on VK2RNS. The frequency is 147.250 with a positive offset. Feel free to join in. All are welcome. Listeners set your scanner to 147.250.

Should you wish to know more about the Club, or its activities, please write to :. H.A.D.A.R.C. at Post Box 362, Hornsby, 2077. or contact the Publicity Officer, John on 9807 2490.

Submitted by John W Turner VK2WRT - Publicity Officer.

MANLY-WARRINGAH RADIO SOCIETY

This week, the Society bids a sad farewell to past president Marque Crozman VK2ZLZ, who is migrating to Queensland. Marque, we hope will keep in touch, using a VK4 call and Internet!

Meanwhile, life goes on at the club, and this Wednesday is lecture night, when Jeff Yates will tell us everything we ever wanted to know about underground cables but were afraid to ask.

Jeff is a practising power engineer who has had much experience in undergrounding power cables along the Barrenjoey Peninsula and elsewhere. A lively raconteur, Jeff will tell of the realities of undergrounding and of the fables embraced by those who scream for it but whose zeal does not extend to an appreciation od the costs and problems involved.

As usual, the meeting starts at 8:00pm at the club rooms, located at the Warringah Volunteer Services Centre, Kamber Road, Terrey Hills. The club meets there every Wednesday night, with business meetings on the second Wednesday, and lectures on the thrid Wednesday of every month. Doors open at 7:30 pm for an 8:00 pm start, and visitors are always welcome. If you need directions, just call in the club's 2m repeater, VK2RMB, on 146.875 MHz, or phone (02) 9450-1746 on Wednesday evenings.

--Richard Murnane VK2SKY

CENTRAL COAST AMATEUR RADIO CLUB INC.

The Central Coast Amateur Radio Club will be hosting a lecture entitled "Stormwatch" next Friday 21st March, 1997.

The speaker will be Mr. Ken Batt from the Bureau of Meteorology. Ken will be talking about weather patterns around the Sydney area with particular emphasis on storm events.

All members and visitors are invited to attend this lecture to be held next Friday 21st March in the Central Coast Amateur Radio Club Clubrooms, Dandaloo Street, Kariong.

--JOHN POGSON, LECTURE ORGANISER

ORANA REGION AMATEUR RADIO CLUB

The Bi-monthly meeting of the Orana Region Amateur Radio Club will be held on Thursday 27th March at 8 PM in the Scout Hall in Talbragar St Dubbo.

Mr John Moss from Telstra Dubbo will talk on Fibre Optics into the 21 century.

-
Here is a summary of news items covered on edition #207 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 21-Mar:
-
1. Ham Radio Volunteers May Get Liability Relief from Congress
2. FCC Suspends the Issuance of 1X1 Special Event Call Signs
3. Commission Wireless Chief Leaving FCC for Duke Alum Position
4. AEA Sells Product Lines, Name and Model Numbers to Survive
5. Ham Radio to Appear in Another Summer Movie
6. Special Event Station Calendar
7. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
8. AMSAT Phase 3-D Powered-up, It's "Alive and Doing Well"
9. Funding for Phase 3-D Launch Still Projecting Shortfall
10. STS-83 Set for Launch Next Month, To Carry SAREX and Three Hams
11. ARISS Up to Nine Signatories, RSGB, JAMSAT, AMSAT-NA Pending
12. Weekly Propagation Forecast
13. ARRL Section Manager Candidates Unopposed, Begin Terms July 1
14. Postal Snafu Delays Delivery of March QST to California Members
15. ARRL Headquarters Phone System to Disconnect "Old" Numbers
16. Camputer Industry Backs Bill to Liberalize Computer Exports
17. McAfee Warns of Internet Email Virus
18. "The RAIN Dial-up" from Chicago
19. PCs Idle Time Increases, More Time Spent Doing Nothing
-
Funding for the program's transmission and production expense was
provided this week by a grant from the Stoddard Family and users of
the N9SBH repeater, in North Webster, Indiana, where "This Week in
Amateur Radio" is heard on 224.16 MHz and on 147.445 MHz simplex,
serving North Webster, Goshen, Warsaw, Plymouth, and Syracuse.
Presentation of "The RAIN Dial-up" has been made possible by a
grant from Reuben Ruen, WB0BWL, of Minneapolis, Minnesota.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EST) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
```

longitude in equatorial geosynchronous orbit. The transponder center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz. Program audio is on the 6.2 MHz analog subcarrier. On the Internet, audio is available each Sunday in 8-bit .WAV file format, sampled at 11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm through the courtesy of the Blue Ridge Video and Digital Society of Roanoke, VA. A separate "RealAudio" file is also available at this site. The service is carried on VHF/UHF repeaters throughout North America and on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

-

Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

I really have to agree here. I can transmit information at 56KBaud using an ordinary telephone voice line. Why is it illegal to do exactly the same using an HF channel? Or a 900 MHz rig?

I don't know if this can be of any help but here in Norway (also worldwide, I believe) there is a lot of Radio Direction Finder beacons for maritime and aeronautical use around 400 khz. Maybe one of them has gone berserk?

It also mentions that radio is an "art."

I've gotten a little bit tired of the surrealistic and impressionistic modes of operating. I've recently installed a post-modern antenna on my tower.

I looked at this with the "Pocket Recorder" from my PAS 16, which gives
a rough visual representation as well as allowing me to play with the
sound a bit. I don't believe it's a loop, but it is definitely cyclic
and my guess is a pretty powerful arc somewhere in the power grid. (For
all the world, it could be one of those annoying fish tank heaters.)
It's not Morse code, but I can hear the similarity.

I would guess there are two sources, one being the very intermittent
one and the other being the seconds-long continuous sound (the latter
is probably a motor somewhere nearby).

Hi All

Sorry for this post here, but this is a more likely place for me to get a response.

I have been trying to track down the person who got me involved in ham radio back in 1979 with no success. He is Hennie Fourie, ex ZS2BM, from East London, South Africa. It was through him and his efforts that I took the course of study that I did, and he doesn't even know this!

Anyone with information, please conact me at my mail address.

Thank you all.

Do away with code???

Let me check my slide rule for a moment.

OK..... it seems that some people enjoy that mode.

I am one who does not. I perfer the computer. Why not require all hams to pass a computer test.... retroactive so that all the old CW operators (the ones who support CW requirements) can get up to speed with modern communication methods.

Does that follow current logic?

William Lee

5817. 6m yagi over HF yagi question

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-15 00:00:00 UTC
From: bob@ultranet.com
Message-ID: <5gef5bvut1@decius.ultra.net>
Source record: 202391
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

I have a Cushcraft A4S HF tribander on my tower. It is the only yagi on the mast. The tower is 50' and the mast extending through the top section is about 10' (at the top is a 2m/440 colinear vertical). Currently the A4S is at about 56'

I would like to mount a 6m yagi on the same mast. If I lower the A4S to the bottom of the mast (just above the flat top section) I could put the 6m yagi about 7' above it max (limited by my height and reach). That is close to my limit of seperation of the antennas.

Does anyone have any experience with this type of setup? Currently my A4S has very good 2:1 SWR bandwidth and I'd hate to loose too much of that and also spoil the pattern too much. I can live with a litte.

I'd like to find out about experiences before finding any surprises out the hard way.

Thanks,
Bob AE1M

Hehehe...not me... I tried over eight different VFO designs, and none would oscillate for me. I'm on my ninth now... :)

>True, but they can just as easily build FSK rigs and pick
>up a 6 db decoding advantage. And we must ask, is *simple*
>what we want amateurs to be? Amateur radio is supposed to
>supply a pool of trained technicians and electronics experts,
>but there is no demand for trained Morse operators or experts
> in simple MOPA transmitter construction any longer.

Out of ALL the argument's for getting rid of the code I've heard so far, this is the credible. My homebrew HF rig that I'm building is built for CW; however, it has "expansion" ports which will allow me to toy with other modes, FSK being one of them (for SSTV, and HF packet)... ;)

>We can communicate further and with less
>> power with narrowband comms.

CW only seems to go further than other modes only because we're putting more power into the carrier. However, assuming that the power remains constant, a wide-bandwidth signal (e.g., DSB ATV) will travel the same distance. However, the power per unit bandwidth will be lower, which means its signal to noise ratio will decline. The trick, then is coming up with a way to let the receiver discern between noise and the intended signal (after all; the receivers antenna will receive the vector sum of the signal plus atmospheric and antenna noise). This is exactly what Spread Spectrum is.

>Apparently you aren't aware of the Shannon relation.
>That tells us we can use less power for a given information
>rate if we are willing to use more bandwidth to transmit it.

This is true, BUT the receiver also receives the noise distributed throughout that bandwidth as well. Since noise is random and usually has a constant level throughout space (whereas the desired signal has decreasing power levels with increasing distance), and a standard receiver is incapable of determining what is signal and what is noise, we hear predominantly noisy signals with farther and farther distances.

Spread Spectrum is nothing spectacular; all it does is allow the receiver to decipher which is noise and which is signal. This means that the receiver has to be BUILT to use the Shannon Rule. All SS is a radio inside a radio...

Besides, the FCC rules only allow SS emissions on UHF or higher, and the current logging requirements are somewhat prohibitive for anything but digital communications; this SEVERELY limits the utility of SS. If we were allowed to use SS on HF (or even VHF, like on 6m), I'm sure that SS would have gained MUCH wider acceptance than it currently enjoys today.

>This is *the* fundamental fact of communications. That
>amateurs fail to understand it is a condemnation of
>amateur radio, and the Morse Myths with which it is
>burdened.

Which is why I want to play with spread spectrum technology... :)
However, my HF rig come first... :)

>> Also I respect code
>> operators immensely -- I've never herd them send
>> Uh,,, Uh,,, Yeah.... and those other utterrances
>> you hear on the 2M band.

hehehe...as a person who does this myself, I can assure you, "mic-freight" isn't fun... It's actually quite embarrassing. I actively try to reduce it as much as I can. I myself find this annoying, and even MORE so when I do it...

>True, they just send -...- -...- when they can't remember
>what they were trying to say when they started the sentence,
>due to the incredible slowness of the method.

That's new to me; I've never heard that. I'll write that down in my book so that I'll have it for future reference. I thought that "Break break" was used only to break into an existing CW conversation with emergency traffic.

When I forget what I'm about to say, I usually send "--- --- .--. ... ..-. --- .-. --. --- - .-- .... .- - .. .-- .- ... --. --- .. -. --. - --- ... .- -.-- -.-"

;) But then, I've not been on HF anywhere near as much as I should have. That's why I'm building my HF CW rig... :)

>> It also is part of understanding communications.
>> Reading Teletype Tape, Understanding differrent
>> signal types. Ham Radio isn't just about you and
>> I chewin' the fat. We have access to communications
>> media and must all strive to become knowledgeable in
>> all facets of it.

Agreed. The biggest annoyance people have (especially the commercial folks) is that people "underuse the ham bands." Take the 2m threats

for example. Sure, everyone talks on 2m. But how many people actually use the 100kbps maximum data rate that the FCC allows us on 2m? Or even 19.2kbps for AX.25? I've yet to see/hear SSTV on 2m... Frankly ALL I see is voice communications (FM or SSB).

70cm is even more "underused" than 2m (except for those who use ATV)...

It's no wonder why Little LEOs want these two bands. And mass commercialization of the ham hobby is also a major contributor to this trend. Why build your own 19.6kbps BPSK digital VHF modem/radio unit (which frees up your radio for voice transmissions), when you can go out and buy an AFSK 1200bps modem that requires you to use a made-for-voice radio? Hate to tell you this, but it actually costs MORE to use 1200bps in this manner than it does to use a modem/radio for higher speed!!

If I had the cash, you'd better bet your bottom dollar that I'd build my own 19.2kbps modem for 2m band...

>Indeed, amateurs are supposed to keep abreast of
>communications technology. But we don't want them
>to be proficient at spark transmission any longer, nor
>do we require them to be expert at selecting and
>polishing galena. Those techniques are no longer
>relevant. And reading punched tape is nearly as
>obsolete a skill as OOK Morse or spark.

OOK Morse survives because it still is USEFUL... *grin*

I think when we talk about "underusing" a band, we're not talking about the lack of people using it; instead, I think it refers to the lack of use of available bandwidth. For instance, 97.307(f) states that we can go up to 19.6kbps for ASCII, AX.25, etc on 2m. That's 19,600 bits per second. Yet the _vast_ majority of people use only 1,200 bits per second... And we're allowed to go up to 100,000 bps for "unspecified" protocols (anything other than ASCII, AX.25, or Baudot). Go figure!!

>> The perception that HAM operators are knowledgeable
>> on ALL forms of communications is one that we should
>> emminate. That's what it's all about. Learning by
>> doing. Walk before run. Building an antenna -vs-
>> storebought. We know about the binary codes in computers.

I agree with this statement; however, we shouldn't get too heady either. We don't want the same stigma that affects engineers ("Oh, he's an amateur radio operator; he thinks he's better than the rest of us").

>> We should be proficient in the binary code for Radio
>> Wave Communications.

For what it's worth, I'd really like to get into binary radio (ie., binary voice communications; that'd use the 19.6kbps bandwidth perfectly!), but have no money to experiment on my own...

>We probably should, binary is a robust signaling method,
>especially coherent BPSK, but OOK Morse isn't binary. It is a

OOK Morse IS binary. Either it's ON, or it's OFF. That's base 2, which is, by definition, binary... :) It's also called AMPLITUDE shift keying (ASK), and was used for RTTY before FSK was even thought of (although it didn't take them long to think of it... :))

>quintenary alphanumeric encoding with three of the states
>not transmitted but left to be inferred against the gaussian
>background. That costs a 3.98 db penalty in decoding
>compared to a fully transmitted encoding.

And you're forgetting the most important factor in morse code: the operator. The operator is the most advanced neural network computer known to mankind, and is capable of discerning signals that a comparator or phase-locked loop deep within some chip cannot...

>If you want amateurs to be knowledgeable about communications,
>you should start with yourself. Attempting to perpetuate the Morse
>Myths does neither you nor the amateur service any credit.

They're not really myths; just misunderstandings. I ask that you don't slough code off just yet; people all too often forget that the most important part of a morse transmission system isn't the radio, it's the operator.

Thanks for a well written article; it's a big departure from the usual spam I see on this newsgroup. I'm looking forward to hearing from you again! :)

Actually you can get your call one day quicker at:

http://www.lantz.com/htbin/cbs_today

I know this for a fact because my new call showed up there on 3/14 and
didn't make it to QRZ until today, 3/15!

It was wild watching that page each day this week, wondering who was
next. They gave out KI8BH on Wednesday!

WHOOPS...self-caught error... I meant to say, "But how many people
actually use the 20kHz maximum bandwidth (which doesn't necessarily
mean 20kbps max!)..."

I read the wrong line in my FCC rulebook: I was accidently looking at
the 70cm line... :) Sorry!

For what it's worth, the NBFM that most handhelds put out already
occupy about 15 to 18kHz of bandwidth...

>lack of use of available bandwidth. For instance, 97.307(f) states

Once again, I got bitten by bad eyesight... We _have_ no maximum
upper limit for data transmission speed for unspecified codes, as long
as the bandwidth fits in 20kHz (again, for 6m and 2m).

I truely apologize for this mixup... Maybe some day I'll get new
glasses... :)

Source record: 202398
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.homebrew
Body handling: 1 inline base64-encoded payload block was not displayed

I'm looking for a transformer, with a two-to-one _winding_ ratio, that can handle both HF and VHF frequencies. Schematic as follows:

```
__
) __
__) (
) (__
__)
```

As you can see, the winding with the greater turns needs to be center tapped for my application. The transformer needs to be able to handle about 15W to 20W of RF power for safety reasons: I'm going to pump no more than 10W through it.

If anyone has a recommendation, please e-mail me or follow up on this newsgroup. I'm looking in particular for part number, manufacturer or order-house, price, and how I can contact them. Many thanks in advance!

```

==========

I tend to agree with George, it has a definite powerline or arcing
sound to it. Most power companies can be very helpful in this area
at tracking stuff down for you, especially if the interference is
as wide spread as you have indicated. A neighbor called the power
company for assistance and they were able to track down a faulty
dimmer switch about three blocks away. :-)

==========

If they can't find it, and you're sure there's some intelligence
to it....well, maybe the FBI DOES have an X-Files office?

...After all, the Lord moves in mysterious ways,
His wonders to perform.
;-}

==========

Good Hunting, interference can be a real pain to the
avid listener. My biggest interference problem is
the oscillator radiation from TV sets every few KHz
across the dial.

Cheers es 73 Dave 3W8PE1B

However, the first story is inaccurate. The individual in question blinked when his assistant moved his pointer to the right letter on a poster that had A through Z printed. There was no Morse code involved.

And that's the rest of the story.

Good.... Day.

It's a great license if you intend to stay above 30 Mc; but don't start asking for HF privileges once you get the tech - that will only cause more polarization.

How about that outdated/inefficient AM ? and why is it called a "roger
beep"... I think you had part of it correct ("over" or "K" beep sounds
more like it).

>Can anyone tell me where I can get a machine that works like a VCR that
>will record from the radio at a specific time each day?

Why not just use a VCR? Just patch the line output of your receiver to
the "aux" or "ext" audio in on the VCR. You will then be able to record
up to six hours (SLP mode) of audio on a single videocassette.

It does if you want to be heard across the Atlantic Ocean, otherwise a rather nice job can be done with a Model T Ford spark coil, a DC model train transformer to feed the primary, a simple gap made from two wires across the secondary, and a loose coupler to a wire antenna. You can wind the latter on an oatmeal box, if they still make those. This makes kind of a lousy transmitter but a hell of a jammer.

>This really doesn't sound
>like spark, anyway.

No, it doesn't, though all the spark I've heard has come from rotary gaps and has more of a tone to it.

Yes, and maybe.

It is sending E NNE NEE EAAN EE NNE NEE EAAN with the occasional long dash
thrown in or the occasional dit missing. I'd have more confidence that
it was Morse if it ever sent any longer letters like Q.

I am reminded of the sub in ON THE BEACH that chases halfway around the
world looking for a nuke survivor banging on a key, only to find a Coke
bottle.

Well the amateur community in West Palm Beach Florida has turned sour. There are some hams that have decided to publish a communist publication and create physical and mental trauma and take the ham hobby down. The good ol boys club "hihi" feels that unless you conform to their ways and kiss their ass then you do not belong in their circle of bullcrap. and they will harrass you, stalk you, damage your rigs and towers, car bomb you, trash your callsign and name within this paper they produce and within their club meetings, threaten your life and family, accuse you of interfering with emergency communications repeaters and nets, run you off the road, there is so much crap its not funny all for the hobby of HAM radio... Did Marconi want this....? I don't think so. There are many hams that are sick of this crap but casn't say anything because they will be victimized also....We are tired of it. There is a flame site at.
http://members.tripod/~canham/Canned_Ham.html It's unfortunate that a flame has to be brought out to expose the crap that is going on in S.FLa

;
I would like to thank everyone for their help on this little
noise project. The outpouring has been fantastic. I've received many
good suggestions from so many of you. In fact, there has been 121 people
who have downloaded the .wav file I put up on my web server
(grep -c "oddmors2" /logs/.stat-logs).

All day today, and part of yesterday the signal has been gone.
As fast as it showed up, it went away. The signal could be received in
the airport area, for many miles. I called the airport but they denied
everything. Then mysteriously, the signal went away. I tried to find
its fundamental frequency, by scanning from 150kc to 30Mc, but couldn't
find it. I'll let everyone know if it comes back, but for now, it would
appear that the problem is solved and we may NEVER know what it was.

sq

(again, Thank you for everyones help. :)

5844. Internet in the Sky from a Big LEO

I read the following in a Reuter's story today. Note that Teledesic is a Big LEO, not a Little LEO. These are not the guys trying to steal amateur spectrum.

The FCC granted a license to offer Internet and telephone services over the airwaves to Teledesic, a company backed by Bill Gates of Microsoft and Craig McCaw (former chairman of McCaw Cellular Communications.)

The company will launch and operate a satellite constellation carrying broadband communications of Internet, video-conferencing, interactive multimedia, etc.

This is the first time that the FCC has granted this type of license.

McCaw claims that service will begin in 2002. (Saves them from that pesky year 2000 problem, eh :-)

Hello everyone,

for the fellow that was interested in dual-band transceivers that can
monitor two freqs at once in the same band, the dj-580 and 582 will both do
this, contrary to one fellow's belief.
Check out the dual-watch function.

Silent Key

Arthur Harris VK2FFH passed away most unexpectedly on the 28th Feb.
Arthur was very well known on many Amateur Radio nets including :
the AFARN, fishers Ghost net, the Wagga net and the NSW Central
Coast net. our condolences to his family.
Vale Arthur VK2FFH.

COLS COLUMN

WE RETURN THIS WEEK TO THE SERIES ON EARLY COMMUNICATIONS AND
CONTINUE WITH JOSEPH HENRY.

YOU WILL RECALL THAT HENRY DISCOVERED THE IMPORTANT PRINCIPLE
THAT THE RESISTANCE OF A LOAD IN A CIRCUIT MUST BE MATCHED TO
THE RESISTANCE OF THE POWER SOURCE, USUALLY IN HIS DAY A
BATTERY. YOU WILL ALSO RECALL THAT HE DISCOVERED THAT A LARGE
SINGLE CELL HAS A LOW VOLTAGE AND LOW RESISTANCE, WHILE A
MULTI CELLED BATTERY HAS A HIGH VOLTAGE AND HIGH RESISTANCE.
USING BATTERIES OF DIFFERENT VOLTAGES AND RESISTANCES HE
DISCOVERED HIS MOST IMPORTANT PRINCIPLE.

HE DECIDED TO CONSTRUCT A TELEGRAPH OF HIS OWN TO ENABLE HIM TO DEMONSTRATE THE ELECTRICAL EFFECTS HE HAD DISCOVERED IN A CLASSROOM AT ALBANY. HE ARRANGED ALMOST A MILE OF WIRE ROUND THE CLASSROOM, AT ONE END HE CONNECTED A 'TROUGH' (SEE BELOW), AT THE OTHER AN INTENSITY ELECTROMAGNET, CLOSE TO WHICH WAS PIVOTED A PERMANENT MAGNET. WHEN THE CIRCUIT WAS CLOSED THE ELECTROMAGNET ATTRACTED THE PERMANENT MAGNET, WHICH, WHEN IT MOVED, STRUCK A BELL. THIS IS ALMOST CERTAINLY THE FIRST ELECTROMAGNETIC TELEGRAPH.

HENRY CONSTRUCTED A SECOND TELEGRAPH AT PRINCETON AFTER BEING APPOINTED A PROFFESSOR THERE IN 1832. IT WAS SIMILAR TO THE ONE AT ALBANY BUT WAS MODIFIED BY USING A WATER WELL AT EACH END OF THE COMMUNICATING LINE. HE WAS NOT THE FIRST TO USE THE EARTH AS ONE OF THE TELEGRAPHIC CONDUCTORS, BUT, HIS WORK WAS INDEPENDENT OF OTHER WORKERS. UNFORTUNATLEY

HE DID NOT TAKE OUT PATENTS FOR THIS PIECE OF WORK OR EVEN PUBLISH DETAILS OF HIS TELEGRAPH. HE HAD TO ASK FOR EVIDENCE FROM 'EYE WITNESSES' TO THE EXISTENCE OF HIS TELEGRAPH IN HIS DISPUTE WITH MORSE SOME YEARS LATER. HIS LAW ACTION IS PROBABLY THE ONLY REASON THIS SECTION OF HIS WORK IS KNOWN TODAY.

THIS SECTION TOO LONG FOR ONE WEEK. 73S FOR NOW DE COL VK2CTD.

PS. THE 'TROUGH' WAS THE CRUICKSHANK MULTI-CELL BATTERY, SO CALLED BECAUSE THE ACID WAS CONTAINED IN A LONG WOODEN TROUGH. THE PLATES WERE SQUARE SHEETS OF COPPER AND ZINC, SOLDERED TOGETHER IN PAIRS TO FORM DOUBLE-THICKNESS SQUARE SLABS. THESE SLABS WERE HELD IN VERTICAL GROOVES CUT IN THE SIDES OF THE TROUGH, THUS FORMING A NUMBER OF SEPARATE CELLS CONNECTED TOGETHER IN SERIES.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(28 FEBRUARY - 06 MARCH)

ISSUED ON 07 MARCH 1997

SUMMARY

Date 28 01 02 03 04 05 06

A 28 11 14 8 4 11 (10)
T 12 22 19 13 8 6 34

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH, W.A. WAS QUIET OR QUIET TO UNSETTLED DURING THE PERIOD. THERE WERE BRIEF ACTIVE PERIODS ON 2ND AND 6TH MARCH.
FREQUENCIES WERE NEAR MOSTLY NEAR PREDICTED MONTHLY VALUES WITH SOME DEPRESSED PERIODS TO 15 PER CENT ON 28TH FEBRUARY,

AND 1ST MARCH; AND WITH DEPRESSED PERIODS TO 10 PER CENT ON
3RD AND 4TH MARCH.

FORECAST (07 MARCH - 13 MARCH)

SOLAR: VERY LOW

GEOMAGNETIC: UNSETTLED TO ACTIVE 07-10 MARCH, QUIET TO
UNSETTLED DURING OTHER DAYS.

FREQUENCIES: UP TO 30 PER CENT DEPRESSIONS IN MUF'S POSSIBLE
DURING 07-10 MARCH, NORMAL CONDITIONS EXPECTED
FOR THE REST OF THE PERIOD.

NOTE OF INTEREST:

BS7H, Scarborough Reef. Even though there will be RTTY gear at BS7H, there are many things to setup by the team. An important one is the separation between stations site to work two modes on the same band against the free space on the island. Anyway Kan Mizoguchi, JA1BK a world wide and experienced operator has been spotted on Sunday 23rd testing the rtty gear. The goal is to provide at least one QSO with as many as possible. For this reason, the operators will concentrate on those regions having the most difficult propagation paths.We must project the need for rtty to anyone that can cary the message to the group. For more info please contact Tim Totten, N4GN (ex-KJ4VH), at E-mail n4gn at iglou.com or check the BS7H 1997 Home Page: (http://www.iglou.com/n4gn/sr/)

The VK2SG RTTY DX NOTES are also available on Internet at reflectors digital-dx st.rim.or.jp. See also the OH2BUA WebCluster at URL http://www.clinet.fi/jukka/webcluster.html.

For next week's bulletin send your bandpass to Bob, WB2CJL at W5KSI.(hashsign)NOLA.LA.USA.NA or e-mail wb2cjl at juno.com

Gl de (DX2) Luciano, I5FLN

ARLD011 DX news

This week's bulletin was made possible with info provided by 425DXnews, DXNL, The 599Rpt, John, KK9A, Paul, K1XM, Chuck, N4BQW, and Contest Corral from QST. Thanks to all.

EASTERN MALAYSIA, 9M. Charlotte, KQ1F, and Paul, K1XM, will be QRV from Sabah, Malaysia, starting in mid March. Callsigns are 9M6TCR and 9M6TPR, respectively. QSL all calls to KQ1F.

ZAIRE, 9Q. 9Q5PA will be QRV for the next 15 months. QSL via Frank Patris, c/o American Embassy Kinshasa, Unit 31550, APO 09828, USA.

QATAR, A7. Chris, A71CW, will be QRT by the end of March. >From here, he travels to Oman, A4. No callsign information as yet is available.

GUERNSEY, GU. F5SHQ is QRV on CW as MU0ASP. He expects to be here for several months. QSL to Mathieu Roche, 4 Cours de la Liberation, F 33000 Bordeaux, France.

DJIBOUTI, J2. Dominique, F5RYC is QRV as J28YC. QSL via F6EJI.

MIDWAY ISLAND, KH4. Astronaut Chuck Brady, N4BQW, will be QRV from here February 27 to March 6, during the closing of the historic Midway Island Naval Station. He intends on bringing HF and 2 meter equipment. There is also the possibility of some RTTY operation. The callsign he will use is unknown at this time. Check PacketCluster spots for the latest information.

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 294 -- Excerpts

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K2BF, N3SL, 9K2HN, DJ5AV & DX News Letter, DL3ABL, F6AJA, G4BUE & DX News Sheets, I4LCK, JH2PDS/1, LA6WEA, OZ8RO, SP6ECA, VE6NU, VK3EW and ZS1AEC for the following DX information.

9M6, MALAYSIA. Charlotte, KQ1F, and Paul, K1XM, will be operating from Sabah starting in mid-March. Their callsigns are 9M6TCR and 9M6TPR respectively. This is a combined scuba-diving and amateur radio trip. They will bring a small station consisting of an Icom IC-735 and Cushcraft AP-8 vertical. Operation is planned from three islands, all using the same callsigns: Borneo, Sipadan and Layang Layang. QSL all via KQ1F.

FR, REUNION ISLAND. Guy, F5MNW, will be active as FR/F5MNW or TO5UFT from here March 22nd to April 6th. He will be mostly active on CW. Also, look for FR/IK2GNW to be active, especially on 80 and 160 meters from March 15-20th.

JX, JAN MAYEN. Per, JX7DFA, continues to be active on the lower bands. He has been on almost every day during the last week working stateside stations during their evening hours (around 0300z). For CW, check 3512 and 1824.5 kHz and for SSB on 3599 and 1842 kHz. Meanwhile, Per has promised to come on RTTY before he leaves the island. He is currently facing some problem with the rtty interface but hopes to solve the problem soon. QSL to his homecall LA7DFA.

T33, BANABA ISLAND. Ron, ZL1AMO, hopes to go to Banaba Island in April. No other details were given.

ZK1, SOUTH COOK ISLAND. Willy, VE6JO, will be in Raratonga from now until March 10th. His callsign will be ZK1JOO. Details on operating were not provided.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit.

>
>73.

You got me to drag out my 580 and check out this function. Though it really is just a two frequency scan, it is not a true dual frequency receive function. My TH78A will receive two freqs in the same band at the same time. But after checking it out pretty good, it does reduce the sensitivity of either freq by quite a factor.

5854. Re: Ask Paul Harvey if CW is dead

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-15 00:00:00 UTC
From: John Hughes <afn01079@afn.org>
Message-ID: <01bc30eb$0401b5c0$4c4692cf@john>
Source record: 202467

The messages didn't purport to justify that. Only offered as an illustration that CW isn't "dead". Why the knee jerk reaction? Can't stand to hear anything positive about CW?

> Yet neither of these stories offers any justification
> to mandate CW testing of amateurs to get on HF.

5855. Re: ? about htx 212 2meter rig

Hi Seve,

RS now has a dual band (2m-440) ht in the stores. Not sure of the specs
yet, though i did hold one in my hand for a minute or two. Much smaller
than their single band HTs.

P.S. Hope you got some ribs and chicken at the "green room" picnic...:)

IT'S FINALLY HERE!!!

T H E

W O R L D B U Y E R S ' S G U I D E

Long waited for - an importer's directory that covers not just one
or two countries, but... THE WORLD! Why shouldn't you be able to
purchase direct from overseas manufacturers just like the big importers
like Sears and Pier One?

Now, with the WORLD BUYERS'S GUIDE, you can.

This book brings you the cream of the crop. We've searched the
world over to bring you only the best manufacturers of the most
unique and innovative products. Hundreds of products and
illustrations are shown in this trove of money making opportunities.
Includes bonus selection of numerous suppliers who offer their complete
catalog just for the asking. This directory will bring you closer to wealth
and a profitbale import business.

Be one of the first to capitalize on the world trade policies,
electronics, Island crafts, cane products, shells, clothing,
tools, costume jewelry, handbags, and so much more!

This guide has never been open to the General public & retails for $150.00.
But through this special promotional E-Mail offer you can purchase it
For Only $29.95

To Order Your Copy of THE WORLD BUYERS'S GUIDE
Send a check or money order for $29.95 To:

NIE - Publishing
Dept. I
Orangeburg, SC 29116-1851

Make Checks Payable to NIE-Publishing

Act NOW!!! This is a limited time offer

5862. code, no-code, "CBr"

Newsgroup: rec.radio.amateur.misc
Date: 1997-03-16 00:00:00 UTC
From: bn589@freenet.buffalo.edu
Message-ID: <E75Cwu.A49@freenet.buffalo.edu>
Source record: 202278

I thought there was a lot of nonsence on the air, boy was I wrong! Some
say that the code requirement is to keep the "CBrs" off of ham radio,
maybe we should have a morse code test for for keeping the "CBrs" off
the internet.
No flames please, if you wish to flame me ask and I will send you the
proper form for flaming.
Peace!

>about 225,000 HKD in Los Angeles" and he couldn't even come close,
>much less offer an attractive deal.

That is if you can take the rudeness of the Hong Kong Chinese. Not only
are they rude but dishonest to boot! If they give you a low price, and
you decide to buy the equipment, you find out it doesn't include the
charger, the antenna the battery... You get the HT with nothing. Then
they tell you that there is a Japanese version and a Taiwan version etc,
etc... If you leave the store and come back later, the sales people
yell at you: "I spoke to you this morning, why do you come back!"

This is all up and down Nathan Road, the main drag over there. Pass
them by and get your gear here in the states from nice, honest people!

Submarine transmissions. All VLF, machine keyed, feeds into 455KHz (3rd
Harmonic)
```

>
>It might be at that, but your .wav file is kind of unique. I don't think
>I've ever heard anything like this. You have a real good mystery here.

"Kind of unique" doesn't have much meaning to me, but the signal is
the result of the front end being de-sensed by the transmitter. What
the WAV file illustrated is a combination of bad power-line noise
(arcing, probably) and an off-freq signal transmitting continuous CW.
If you invert the WAV file (I'll post what I mean if anyone wants to
hear it), it will become apparent.

If you turn off your preamp and turn off your noise blanker, the
effect will go away. Sorry to deflate a good mystery.

But you still have a problem with interference, and Hugh's advice is
still good:

>At least in your file, the sound is that of raw AC. Absolutely raw,
>unfiltered, 120 Hz and up. This might be a sign controller or
>malfunctioning traffic light. Drive around your immediate neighborhood
>until you can peak the noise at 30 MHZ, then switch to the FM radio and

> CW, should allways be legal to use on our bands, just not the
>determining factor, in weather you can get a license or not. It's a
>matter of personal choice.

Is it a matter of personal choice that I should not have to learn electronics theory? I mean, after all, I don't actually fix any radios -- I package them back up and send them to Yaesu when they break. My lack of interest in electronics doesn't make me any less effective as a communicator, coordinator of emergency traffic, or volunteer in disaster communications (if your Kenwood VHF radio fails during health-and-welfare traffic handling, what are you going to do? Break it open and fix it with a service monitor? I think not. You're going to do what everyone else would -- swap it for a radio that works.)

Knowledge of electronics is very overrated in the hobby, and should be eliminated as a testing element.

Like the US and like just about every other nation on earth. Just
as we don't have one grade in school, we shouldn't have one grade
of ham license. But if it ever does come down to one amateur grade,
let it be the Extra with its 20wpm code and a demanding written portion.
KH2PZ

P.S. I'd be interested in what type of exams a Mexican ham had to
pass in order to receive his all-band all-mode all-privilege license.

5875. Hams in film industry?

> KH2PZ

WHY do we have CW...it is an operating MODE just like rtty/ssb/or atv
WHY should we learn it if WE dont want to...it does not help our
technical skills..i have operated in the hf band for years as a mars
operator to ships at sea an fixed land stations/ i have operated 10
meters all over the world as a NOVICE then a tech now a tech plus
I NEITHER WANT nor care to use the cw however atv/ssb/eme/meotor scatter
and 1.2ghz comm interest me..NOT CW which just another mode..and thats
all it should be..I am curretn building a MARS STATION with FULL ecomm
capability for the NAVY including downlinking real time satelite
info..every 10 mins. instead of the standard 20-60 mins you find on the
internet for my location (PASCAGOULA MS)...

AGAIN CW is just another mode..lets see that its stays there and doesnt
impeade further progress..I WILL NEVER UPGRADE BECAUSE OF THIS it is not
needed to operate on the higher band and i will not be there i get
around just fine without it thank YOU

SB DX @ WW $OPDX.296
Ohio/Penn DX Bulletin No. 296

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 296
BID: $OPDX.296
March 17, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K4HQ, AL7J, NL7TB, NC8V, 5X1D, DK6QW, F6AJA, G4BUE & DX News Sheet, PS7AB, RA3AUU, SM0BFJ, VK3XV, YU1OL and ZS9F for the following DX information.

3DA, SWAZILAND. Koji, JM1CAX/ZS6CAX, and Tad, JH7KPU/AA3JA, will be active as a Multi/Single in the CQ WPX SSB Contest using the 3DA5 prefix for the first time. During the contest, they will use the callsign 3DA5A. Outside the contest (before and after), they will be active as 3DA0NX (Koji) and 3DA/AA3JA (Tad). QSL 3DA5A via JH7FQK. QSL 3DA/AA3JA via JH7FQK: Ichio UJIIE, 162 Shionosawa, Kohata, Towa, Adachi-gun, Fukushima 964-02 JAPAN. QSL 3DA0NX via ZS6CAX: Koji Tahara, Japanese Embassy, P.O. Box 11434, Hatfield 0028 SOUTH AFRICA.

3V8, TUNISIA. Hrane, YT1AD, will be active from Tunis as 3V8BB, during the CQWW WPX SSB Contest. He will be operating as a Single Op/All band entry (No WARC activity). QSL via home call YT1AD.

5X, UGANDA. Gus, 5X1D, informed OPDX that he is now active on 144 MHz EME (Earth-Moon-Earth). He is using a 17 element long boomer with 300w output. The first EME contact, which took place on March 11th between 1700-1756z, was with Dave, W5UN, with a good signal. By the way, this was Dave's country number 145 on 2 meter EME. Gus is open for skeds when the Moon is near the horizon. For schedules, send E-mail to Gus at: jageror@wfp.or.ug. QSL via SM0BFJ.

6W, SENEGAL. Jacques, F6BUM, will be here from April 4-17th. He will stay on the Senegalese island called Karabane, which has been reported will count for a new IOTA in Casamance region. He will use an FT900 and R7 antenna, and will be active on SSB and CW with operations on 40-10 meters. QSL via CBA.

6Y, JAMAICA. Look for Jay, K4ZLE, to be active as K4ZLE/6Y5 from "Ocho Rios March", until March 24th. His activity will be mainly CW on 80, 40

and 30 meters. QSL to CBA.

7O1A "THE REAL STORY AND FACTS FROM THE DXCC DESK". OPDX InterNet Subscribers will receive an additional bulletin regarding details on the 7O1A decisions.

9M, LAYANG LAYANG ISLAND (Spratly Island) AND EAST MALAYSIA (UPDATE). If you hear 9M6TCR or 9M6TPR before March 21st, it is Charlotte, KQ1F, and Paul, K1XM, probably active from Borneo (IOTA OC-088, CQ zone 28), East Malaysia. From March 21-28th, they will be active from Layang Layang (IOTA AS-051, CQ zone 26) otherwise known as part of the highly contested Spratly Islands. Those who like to chase YL stations, this will be a rare catch. Charlotte will be signing 9M6TCR. But if you hear Paul active as 9M6TPR, you may request a YL contact, and Paul will try to get Charlottee to come to the mike if she is not busy. They will make an effort to work the U.S., especially the East Coast, mostly on 40 and 20, and possibly 30 meters. Paul will be active during the CQWW WPX Contest, but he will not announce his QTH every QSO (ONE HINT: He will occasionally send 599 26, which means they are at Layang Layang). From March 29th to April 4th, they will be on Sipadan (IOTA OC-133, CQ zone 28, East Malaysia). After April 4th, any additional operation will be from Borneo. Dates are subject to change due to the weather. Also, RTTY operation is not likely, but not totally ruled out.

EW35, BELARUS. The radio club (EW1WB) "The Distant Countries" of Minsk will celebrate their 35th anniversary of foundation. Operations will take place with the special call EW35WB. QSL via EW1WB, Box 380, Minsk-50, 220050, Belarus.

FM, MARTINIQUE. Look for Nicolas, F5TGR, to be active until March 22nd, as FM/F5TGR.

KC6, BELAU. The Japan Palau Crazy Contest Club is planning to be an entry in the CQWW WPX SSB Contest as a Multi/Single signing as T88X. Operators are JA6VZB, JE6DND and JJ6TYG. Activity will be on 80-10 meters (No 160m planned). Before the contest, T88JA will be active on the WARC bands or RTTY. QSL T88JA via JA6BSM (*NOT* JA6VZB). QSL T88X via JE6DND.

KL7, ALASKA QSO PARTY. The QSO Party is sponsored by the South Central ARC, from 0000z March 22nd to 2400z March 23rd. Work Alaska stations only (Alaska stations work everyone). Exchange RS(T) and state/province/DXCC country (AK stations send city). Score 1 pt/phone, 2 pts/cw, digital and SSTV. 160, 80 and satellite count double. Frequencies: 1.835, 3.700, 3.875, 7.035, 7.135, 7.235, 14.035, 14.245, 21.135, 21.335, 28.135, and 28.335 MHz. Final score is QSO pts x AK cities worked (AK stations use states/provinces/DXCC countries). Send logs by May 31 to Kyle Sandel, AL7J, 8811 July Creek Cir, Eagle River, AK 99577. You can E-mail at: sandelkw@alaska.net. Certificates are awarded.

MAJOR QRP IOTA DXPEDITION (Rare County)! The Knightlites, a QRP club consisting of Andrew/K4HQ, Dave/WA4NID, Paul/AA4XX, Steve/AA1BK, Tim/N4EKP, John/WB4OFT, and Bob/AE4IC, will be going to Porstmouth Island (NA-067, NC-0??) on April 4-6th. Portsmouth is an UNINHIBITED island located on a North Carolina map due south of Ocracoke Island and is in Carteret County (the RAREST county is NC!!!) They WILL be running QRP with 4 stations on the air simultaneously! Three stations will be on CW and ONLY one SSB Their antenna will have a triband yagi at approx. 60-80 feet for 10, 15, and 20 meters. For the lower bands, they will have a Carolina Windham and a G5RV, and maybe a 4 square on 40 and 80 meters. Frequencies will be on the common IOTA frequencies, as well as the County Hunter's frequencies and in the DX window, if they need to. QSLS via K4HQ, Andrew Lewis, 7612 Justin Place, Chapel Hill, NC 27514-9708. A special webpage was just setup for the expedition. It has all the info and will be quite helpful in the coming weeks. After the expedition, they will have ALL the LOGS available for checking! The webpage URL is: http://www.ipass.net/~aa4xx/ocra1.htm

OOOOPPPSSS DEPARTMENT. A little mistake in the rules were published under "1997 RUSSIAN DX CONTEST" in OPDX.295. Multipliers should have included DXCC Countries along with oblast abbreviations + Antarctica, Malyj Vysotskij Island and Franz Josef Land. For more information on this contest, send an E-mail message to: ra3auu@contesting.com -or- ra3auu@glasnet.ru. Also, checkout the LA9HW WEB site: http://home.sn.no/~janalme/hammain.html

OY, FAROES ISLANDS. Five German hams will be visiting the islands between June 7th and 20th. They plan to operate 160-10 meters using different antennas (dipol, vertical and beverage). Look for the following callsigns and operators: Claus - OY/DF8QJ, Michael - OY/DK6QW, Joerg - OY/DL3QQ, Werner - OY/DL4YBZ and Reinhard - OY/DL6YFB. QSL all operators to Alfred, DK4QO.

USI ALERT. The Ascension DX Group (ADXG) will have 3 full time stations fired-up 24 hours per day on April 11-13, starting around 2000Z from Grand Island LA-003S (NA-168). The operator list includes: N5VWM, KA5RNH, KB5RZY, W5ZDW, W5XV, AB5XP, WN5W and the old Cajun Pirateer himself, AA5AT!

VK3 AND VK4 BUREAU. The Wireless Institute of Australia Victorian Division and the Wireless Institute of Australia Queensland Division are the only IARU recognised QSL Bureau in the VK3 and VK4 call areas. All cards should be directed to these bureau unless otherwise directed by the station operator. Any other bureau operating in the VK3 or VK4 call areas is privately operated and has no association or distribution agreement with the WIA. The VK3 and VK4 bureau will not process cards from or to any private bureau operating in the respective call areas. Inwards Bureau addresses are unchanged and are as follows: VK3 - G.P.O. Box 757G, Melbourne Vic. 3001, Australia. == VK4 - G.P.O. 638, Brisbane Qld. 4001, Australia.

ZD7, ST HELENA. The "DXNS" reports that Ray, ZD7RH, is a newly licensed station active on 20-10 meters. Please report any QSNs to OPDX.

ZF, CAYMAN ISLANDS. John, NC8V, will be operating from Little Cayman Islands once again as ZF2JC/ZF8 from March 20-27th. Little Cayman is IOTA NA-016. He states that he will operate several hours per day during the entire period he is there and will try to be around 14260 and 21260 khz. Most of his operation will be on SSB, but he will go to CW on request. All QSLs go to his home address at: John Cornwell, 15100 E. Scatter Ridge Rd., Athens OH 45701-8854. A SASEs would be appreciated.

ZS9, SOUTH AFRICA. ZS9F states he will be active during the CQWW WPX SSB Contest on 10, 15 and 20 meters. PLEASE NOTE that this callsign will be cancelled by the Dept. of Communications after the contest. So look for ZS9F for the last time. QSL via KK3S.

ZY2, SAO SEBASTIAO ISLAND (BRAZIL). Operators PY2QA, PY2DUN, PY2MMM, PY2OZF, PY2AE and PU2YSU will be active from IOTA SA-028 (DIB 016), located in the Sao Paulo State East Group, from April 18-21st. They will use the callsign ZY2IB. Operations will be on SSB and CW with activities on 80-10 meters. QSL via PY2AE.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to one of the two following addresses:
kb8nw@barf80.nshore.org -or- aq474@cleveland.freenet.edu
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

I propose eliminating the CW testing altogether along with eliminating the publishing of the question pools. Each question pool would have 30 times the number of questions required for a single examination instead of the current 10 times the number. VE's would be required to download examinations on the day of the session from the VEC. This would address a multitude of concerns about the current licensing system that I've heard mentioned.

In case you didn't know, you don't have to learn CW to use those modes.
You only need to learn CW if you intend to get on HF. Since 3 of the 4
modes you mention are restricted to VHF and above, that really shouldn't
be a matter of contention for you.

Funny, they complain when someone doesn't want to learn code then STILL bitch when we finally get to 5 WPM. You can't win with some people. I'm stuck at 8 WPM and can't seem to get through the "wall". I will eventually but this stops my advancing up the old ladder....

Tom
